Rocket Babe Stephen R. Dearman, 2013-12 1982. After thousands of years of alien abductions and experimentation, mankind finally has the ability to fight back via a covert branch of the U.S. military, the Deep Space Strike Force. Aboard the DSSF Flagship U.S.S. PANDORA, an elite crew of 32 men and one woman has but one mission: eliminate the alien threat to Earth once and for all. But in doing so, much like the mythical Pandora, they discover that once the box has been opened the contents cannot be returned. This time a man opened the box but it will take a beautiful intelligent woman to deal with the horrors to come. Led by Verna Starr, call sign Rocket Babe, the crew of the Pandora will raise a planet wide dust storm on Mars that may spread throughout the solar system and rage for years to come.

Large and Dangerous Rocket Ships Mark Canepa, 2019-09-17 There's no available information at this time. Author will provide once information is available.

Modern High-power Rocketry Mark Canepa, 2005 International conspiracy funded by unimaginable wealth and influence detected and destroyed by one determined man operating on the edge of accountability.

The First Launch Syed Hassan, 2021-12-13 The book enables us to visualize the pinnacle of multiple historical events in rocket science and traces the origin of modern rocketry to India, its birthplace and cradle of multiple global innovations in the past and on track to rewrite the frontiers of innovation in future.

Staging High Power Rockets Ray R. Dunnakin III, 2018-10-31 Black powder rockets can be easily staged by using a booster motor that has no delay and no ejection charge, and by placing the upper stage directly over the booster in close proximity. High Power fliers don't have it so easy. Not only are higher-energy composite propellants harder to light, they must be lit from the very top of the motor core. In this booklet Ray Dunnakin walks us through techniques that allow air starting of these high power motors. Once free of the constraint of having to put the upper stage motor directly over the booster, many other configurations can be used. Ray discusses inline (with large separations), parallel and parasite staging, all with multiple motors.

Rockets Robert Hutchings Goddard, 2002-01-01 Rockets, in the primitive form of fireworks, have existed since the Chinese invented them around the thirteenth century. But it was the work of American Robert Hutchings Goddard (1882-1945) and his development of liquid-fueled rockets that first produced a controlled rocket flight. Fascinated by rocketry since boyhood, Goddard designed, built, and launched the world's first liquid-fueled rocket in 1926. Ridiculed by the press for suggesting that rockets could be flown to the moon, he continued his experiments, supported partly by the Smithsonian Institution and defended by Charles Lindbergh. This book is comprised of two papers he wrote for the Smithsonian. Among the most significant publications in the history of rockets and jet propulsion, these Smithsonian articles — the first published in 1919 and the second in 1936 — were issued at a time when little was known about these subjects. Goddard's first paper, *A Method of Reaching Extreme Altitudes*, addressed the theoretical possibility of achieving great ranges by means of well-designed rockets. It also demonstrated that fairly high jet velocities were attainable and described advances in the construction of a solid cartridge magazine-type rocket. The second paper served as a progress report and indicated what had been accomplished through experimentation. Goddard went to to lay the foundations for the development of long-range rockets, missiles, satellites, and spaceflight. In fact, a liquid-fueled rocket constructed on principles he developed landed humans on the moon in 1969. Today, Goddard is widely recognized as the Father of American Rocketry. According to The New York Times, This . . . is certainly a book

that the historian of rockets cannot ignore.

Pioneers of Rocketry Michael Stoiko,1974

1ST GOLDEN AGE ROCKETRY Frank H. Winter,1990-06-17 This is the first comprehensive book on the history of gunpowder rockets. As complex and varied as modern rockets are, they all have a common ancestor--the modest gunpowder rocket--which saw its peak development in the last century. In the early 1880s, Englishman William Congreve changed the face of rocketry by initiating the modern process of research and development. William Hale, Congreve's compatriot, introduced major improvements in rocketry using the advances of the Industrial Revolution in steam power and metallurgy. Frank Winter discusses in detail the international impact of Congreve and Hale rockets for seven major and nine minor European countries, the Americas, India, China, and the Middle East. He describes the applications of the gunpowder rocket to areas as varied as scientific inquiry, whaling, torpedoes, and flying machines. This definitive book assesses the achievements of Congreve and Hale in light of other forms of artillery of the day. It will prove to be a valuable contribution to the history of technology and military history. -- Dust jacket.

Hermann Oberth: One of the Fathers of Rocketry David Myhra PhD,2013-09-28 Hermann Oberth: One of the Fathers of Rocketry. Inventor of the Multistage Rocket & A Believer in OFOs With Intelligent Beings on Far Away Planets in the Universe Transylvania-born Hermann Julius Oberth (25 June 1894-28 December 1989) was an amateur bi-fuel liquid rocketeer and a best-selling author about rocket engine research, development and interplanetary space travel. He also created design ideas for orbiting space solar mirrors...their concentrated energy beamed down to Earth for peaceful purposes as well as military uses as a "death ray." This is the story of some of his most interesting projects!

The Rocket Team Frederick Ira Ordway (III),Mitchell R. Sharpe,1982 From the V-2 to the Saturn moon rocket, this is the inside story of the von Braun team, a group whose experiments in pyrotechnics eventually changed the course of world history.

Make: Rockets Mike Westerfield,2014-08-21 This book teaches the reader to build rockets--powered by compressed air, water, and solid propellant--with the maximum possible fun, safety, and educational experience. Make: Rockets is for all the science geeks who look at the moon and try to figure out where Neil Armstrong walked, watch in awe as rockets lift off, and want to fly their own model rockets. Starting with the basics of rocket propulsion, readers will start out making rockets made from stuff lying around the house, and then move on up to air-, water-, and solid propellant-powered rockets. Most of the rockets in the book can be built from parts in the Estes Designer Special kit.

To a Distant Day Chris Gainor, 2020-04-01 Insightful, instructive, and definitely worth the read.--Greg Andres, Journal of the Royal Astronomical Society of Canada As someone who has been teaching a course on space exploration for many years and has visited most of NASA's space centers, I have found plenty of new and valuable material in To a Distant Day. . . . I recommend the book to all who wish to know more about the conditions, people, and discoveries between 1890 and 1960 that led to the space age.--Pangratios Papacosta, Physics Today Although the dream of flying is as old as the human imagination, the notion of rocketing into space may have originated with Chinese gunpowder experiments during the Middle Ages. Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space. Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky, Robert Goddard, and Hermann Oberth, who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration. It shows us German engineer Wernher von Braun creating the V-2, the first large rocket, which, though opening the door to space, failed utterly as the wonder weapon it was meant to be. From there Gainor follows the space race to the Soviet Union and the United States, giving us a close look at the competitive hysteria that led to Sputnik, satellites, space probes, and--finally--human flight into space in 1961. As much a story of cultural ambition and personal destiny as of scientific progress and technological history, To a Distant Day offers a complete and thoroughly compelling account of humanity's determined efforts--sometimes poignant, sometimes amazing, sometimes mad--to leave the earth behind.

Robert H. Goddard ,1989

Rockets and Missiles A. Bowdoin Van Riper, 2007-11-26 Beginning with World War II, missiles transformed the art of war. For the first time, cities of warring nations were vulnerable to sudden, unannounced, long-distance attacks. At the same time, rockets made possible one of the great triumphs of the modern age—the exploration of space. Beginning with the origins of rocketry in medieval and early modern Asia, Rockets and Missiles traces the history of the technology that led to both the great fear of global warfare and the great excitement of the Space Age. This volume focuses on rocketry in late-twentieth-century Western Europe, Russia, and the United States, as well as the spread of rocket technology to East Asia and the Middle East. It covers the full history of rocket technology—including how rockets improved in performance, reliability, and versatility and how they affected everyday life.
