RAF Fighters Before the Storm Martin Derry,2024-06-30 When the First World War ended the then recently established Royal Air Force was awash with aircraft of all descriptions. More surprising, perhaps, was the fact that despite an ongoing cull of obsolescing types, on the last day of 1919, the RAF still possessed 9,122 non-obsolete aircraft , with a further 1,100 more assigned to the Fleet Air Arm. while the famous SE.5A and Sopwith Camel had by this time largely been consigned to history, the RAF possessed no less than 1,860 Sopwith Snipes which, from 1920, would become the RAF's standard single-seat fighter for years to come. Other core types on charge on 31 December 1919 included some 1,650 Bristol F.2B fighters and 1,250 de Havilland DH.9As, which, together with the Snipe, accounted for over fifty per cent of the RAF's inventory at that time. Avro 504 training aircraft accounted for a further 2,700 airframes. In this Flight Craft Special, the authors provide a detailed and informative pictorial history of those scout/fighter aircraft that served in an operational capacity with the RAF from January 1920 until the last day of 1939 - a period in which Britain once again moved from an era of peace to war with an old enemy, albeit this time Hitler's totalitarian National Socialist Germany as opposed to the Imperial Germany of old. As well as covering each of the fighter types used during the inter-war period, and featuring most of the squadrons, the photographs themselves convey the sense of the technical advances that rapidly took root within Britain's aero industries from the mid-1930s onwards, moving from the brightly-marked overall silver wood and linen biplanes to the dull camouflaged metal-skinned monoplanes. The progression of machine-gun development - from the Lewis and Vickers of the First World War to the later Browning - is covered, spanning the days of the biplanes' two fixed synchronised Lewis or Vickers .303-inch machine-guns mounted in the forward fuselage to eight wing-mounted .303-inch Browning machine-guns in the 'new' monoplane fighters. There is also a small, but fascinating, section on the monoplane 'also rans' - the monoplane fighters that were designed and had prototypes built but failed to reach the finishing post!

Predicting Meteorological Events N. C. Mahanti,2005 Predicting Meteorological Events: Mathematical Approach deals with some important problems covering various important areas of atmospheric and meteorological sciences. Conceptualizations of Time Barbara Lewandowska-Tomaszczyk,2016-06-14 As time cannot be observed directly, it must be analyzed in terms of mental categories, which manifest themselves on various linguistic levels. In this interdisciplinary volume, novel approaches to time are proposed that consider temporality without time, on the one hand, and the coding of time in language, including sign language, and gestures, on the other. The contributions of the volume demonstrate that time is conceptualized not only in terms of space but in terms of other domains of human experience as well. Renowned specialists in the study of time, the authors of this volume investigate this fascinating topic from a variety of perspectives - philosophical, linguistic, anthropological, (neuro)psychological, and computational - demonstrating a familiarity with both classical and recent approaches to the study of time and including up-to-date corpus-based methods of study. The volume will be of interest to philosophers, linguists (including specialists in cognitive linguistics, corpus linguistics, and computational linguistics), anthropologists, (neuro)psychologists, translators, language teachers, and graduate students.

Climate Change and Variability Suzanne Simard,2010-08-17 Climate change is emerging as one of the most important issues of our time, with the potential to cause profound cascading effects on ecosystems and society. However, these effects are poorly understood and our projections for climate change trends and effects have thus far proven to be inaccurate. In this collection of 24 chapters, we present a cross-section of some of the most challenging issues related to oceans, lakes, forests, and agricultural systems under a changing climate. The authors present evidence for changes and variability in climatic and atmospheric conditions, investigate some the impacts that climate change is having on the Earth's ecological and social systems, and provide novel ideas, advances and applications for mitigation and adaptation of our socio-ecological systems to climate change. Difficult questions are asked. What have been some of the impacts of climate change on our natural and managed ecosystems? How do we manage for resilient socio-ecological systems? How do we predict the future? What are relevant climatic change and management scenarios? How can we shape management regimes to increase our adaptive capacity to climate change? These themes are visited across broad spatial and temporal scales, touch on important and relevant ecological patterns and processes, and represent broad geographic regions, from the tropics, to temperate and boreal regions, to the Arctic. *Environmental Research Papers* ,1964
