Must-See Sci-fi Sloan De Forest,2018-05-01 Spanning nine decades and branded by the most trusted authority on film, Turner Classic Movies: Must-See Sci-Fi showcases 50 of the most shocking, weird, wonderful, and mind-bending movies ever made. From *A Trip to the Moon* (1902) to *Arrival* (2016), science fiction cinema has produced a body of classics with a broader range of styles, stories, and subject matter than perhaps any other film genre. They are movies that embed themselves in the depths of the mind, coloring our view of day-to-day reality and probably fueling a few dreams (and nightmares) along the way. In Turner Classic Movies: Must-See Sci-Fi, fifty unforgettable films are profiled, including beloved favorites like *The Day the Earth Stood Still* (1951) and *Fantastic Voyage* (1966), groundbreaking shockers like *Planet of the Apes* (1968) and *Alien* (1979), and lesser-known landmarks like *Things to Come* (1936) and *Solaris* (1972). Illustrated by astounding color and black-and-white images, the book presents the best of this mind-bending genre, detailing through insightful commentary and behind-the-scenes stories why each film remains essential viewing. A perfect gift for any film buff or sci-fi fanatic!

Ignition! John Drury Clark,2018-05-23 This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as “a good book on rocket stuff...that’s a really fun one” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.

Advanced Intelligent Environments Wolfgang Minker,Michael Weber,Hani Hagraas,Victor Callagan,Achilles Kameas,2009-06-16 Over the last decade a number of research areas have contributed to the concept of advanced intelligent environments, these include ubiquitous computing, pervasive computing, embedded intelligence, intelligent user interfaces, human factors, intelligent buildings, mobile communications, domestic robots, intelligent sensors, artistic and architectural design and ambient intelligence. Undeniably, multimodal spoken language dialogue interaction is a key factor in ensuring natural interaction and therefore of particular interest for advanced intelligent environments. It will therefore represent one focus of the proposed book. The book will cover all key topics in the field of intelligent environments from a variety of leading researchers. It will bring together several perspectives in research and development in the area.

Head First Java Kathy Sierra,Bert Bates,2005-02-09 Learning a complex new language is no easy task especially when it s an object-oriented computer programming language like Java. You might think the problem is your brain. It seems to have a mind of its own, a mind that doesn't always want to take in the dry, technical stuff you're forced to study. The fact is your brain craves novelty. It's constantly searching, scanning, waiting for something unusual to happen. After all, that's the way it was built to help you stay alive. It takes all the routine, ordinary, dull stuff and filters it to the background so it won't interfere with your brain's real work--recording things that matter. How does your brain know what matters? It's like the creators of the Head First approach say, suppose you're out for a hike and a tiger jumps in front of you, what happens in your brain? Neurons fire. Emotions crank up. Chemicals surge. That's how your brain knows. And that's how your brain will learn Java. Head First Java combines puzzles, strong visuals, mysteries, and soul-searching interviews with famous Java objects to engage you in many different ways. It's fast, it's fun, and it's effective. And, despite its playful appearance, Head First Java is serious stuff: a complete introduction to object-oriented programming and Java. You'll learn everything from the fundamentals to advanced topics, including threads, network sockets, and distributed programming with RMI. And the new. second edition focuses on Java 5.0, the latest version of the Java language and development platform. Because Java 5.0 is a major update to the platform, with deep, code-level changes, even more careful study and implementation is required. So learning the Head First way is more important than ever. If you've read a Head First book, you know what to expect--a visually rich format designed for the way your brain works. If you haven't, you're in for a treat. You'll see why people say it's unlike any other Java book you've ever read. By exploiting how your brain works, Head First Java compresses the time it takes to learn and retain--complex information. Its unique approach not only shows you what you need to know about Java syntax, it teaches you to think like a Java programmer. If you want to be bored, buy some other book. But if you want to understand Java, this book's for you.

Introduction to Plasma Physics and Controlled Fusion Francis F. Chen,2013-03-09 TO THE SECOND EDITION In the nine years since this book was first written, rapid progress has been made scientifically in nuclear fusion, space physics, and nonlinear plasma theory. At the same time, the energy shortage on the one hand and the exploration of Jupiter and Saturn on the other have increased the national awareness of the important applications of plasma physics to energy production and to the understanding of our space environment. In magnetic confinement fusion, this period has seen the attainment 13 of a Lawson number nTE of 2×10^{21} cm⁻³ sec in the Alcator tokamaks at MIT; neutral-beam heating of the PL T tokamak at Princeton to $KT_i = 6.5$ keV; increase of average β to 3%-5% in tokamaks at Oak Ridge and General Atomic; and the stabilization of mirror-confined plasmas at Livermore, together with injection of ion current to near field-reversal conditions in the 2XII β device. Invention of the tandem mirror has given magnetic confinement a new and exciting dimension. New ideas have emerged, such as the compact torus, surface-field devices, and the EBT mirror-torus hybrid, and some old ideas, such as the stellarator and the reversed-field pinch, have been revived. Radiofrequency heat ing has become a new star with its promise of dc current drive. Perhaps most importantly, great progress has been made in the understanding of the MHD behavior of toroidal plasmas: tearing modes, magnetic VII VIII islands, and disruptions.

Bastard Culture! Mirko Tobias Schäfer,2011 The computer and particularly the Internet have been represented as enabling technologies, turning consumers into users and users into producers. The unfolding online cultural production by users has been framed enthusiastically as participatory culture. But while many studies of user activities and the use of the Internet tend to romanticize emerging media practices, this book steps beyond the usual framework and analyzes user participation in the context of accompanying popular and scholarly discourse, as well as the material aspects of design, and their relation to the practices of design and appropriation.

Lifelong Technology-Enhanced Learning Viktoria Pammer-Schindler, Mar Pérez-

Sanagustín, Hendrik Drachler, Raymond Elferink, Maren Scheffel, 2018-08-24 This book constitutes the proceedings of the 13th European Conference on Technology Enhanced Learning, EC-TEL 2018, held in Leeds, UK, in September 2018. The 42 full and short papers, 7 demo papers, and 23 poster papers presented in this volume were carefully reviewed and selected from 142 submissions. This year, the European Conference on Technology-Enhanced Learning (EC-TEL) will engage researchers, practitioners, educational developers, entrepreneurs and policy makers in a joint discussion on how to put science, technology and practice at the service of learning to embrace these challenges on the topic: Lifelong technology enhanced learning: Dealing with the complexity of 21st century challenges. /div Chapter is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Multiword expressions at length and in depth Stella Markantonatou , Carlos Ramisch , Agata Savary , Veronika Vincze , The annual workshop on multiword expressions takes place since 2001 in conjunction with major computational linguistics conferences and attracts the attention of an ever-growing community working on a variety of languages, linguistic phenomena and related computational processing issues. MWE 2017 took place in Valencia, Spain, and represented a vibrant panorama of the current research landscape on the computational treatment of multiword expressions, featuring many high-quality submissions. Furthermore, MWE 2017 included the first shared task on multilingual identification of verbal multiword expressions. The shared task, with extended communal work, has developed important multilingual resources and mobilised several research groups in computational linguistics worldwide. This book contains extended versions of selected papers from the workshop. Authors worked hard to include detailed explanations, broader and deeper analyses, and new exciting results, which were thoroughly reviewed by an internationally renowned committee. We hope that this distinctly joint effort will provide a meaningful and useful snapshot of the multilingual state of the art in multiword expressions modelling and processing, and will be a point point of reference for future work.

Fundamentals of Computer Programming with C# Svetlin Nakov, Veselin Kolev, 2013-09-01 The free book Fundamentals of Computer Programming with C# is a comprehensive computer programming tutorial that teaches programming, logical thinking, data structures and algorithms, problem solving and high quality code with lots of examples in C#. It starts with the first steps in programming and software development like variables, data types, conditional statements, loops and arrays and continues with other basic topics like methods, numeral systems, strings and string processing, exceptions, classes and objects. After the basics this fundamental programming book enters into more advanced programming topics like recursion, data structures (lists, trees, hash-tables and graphs), high-quality code, unit testing and refactoring, object-oriented principles (inheritance, abstraction, encapsulation and polymorphism) and their implementation the C# language. It also covers fundamental topics that each good developer should know like algorithm design, complexity of algorithms and problem solving. The book uses C# language and Visual Studio to illustrate the programming concepts and explains some C# / .NET specific technologies like lambda expressions, extension methods and LINQ. The book is written by a team of developers lead by Svetlin Nakov who has 20+ years practical software development experience. It teaches the major programming concepts and way of thinking needed to become a good software engineer and the C# language in the meantime. It is a great start for anyone who wants to become a skillful software engineer. The books does not teach technologies like databases, mobile and web development, but shows the true way to master the basics of programming regardless of the languages, technologies and tools. It is good for beginners and intermediate developers who want to put a solid base for a successful career in the software engineering industry. The book is accompanied by free video lessons, presentation slides and mind maps, as well as hundreds of exercises and live examples. Plato's 'Republic': An Introduction Sean McAleer, 2020-11-09 It is an excellent book – highly
intelligent, interesting and original. Expressing high philosophy in a readable form without trivialising
it is a very difficult task and McAleer manages the task admirably. Plato is, yet again, intensely topical
in the chaotic and confused world in which we are now living. Philip Allott, Professor Emeritus of
International Public Law at Cambridge University This book is a lucid and accessible companion to
Plato's Republic, throwing light upon the text's arguments and main themes, placing them in the
wider context of the text's structure. In its illumination of the philosophical ideas underpinning the
work, it provides readers with an understanding and appreciation of the complexity and literary
artistry of Plato's Republic. McAleer not only unpacks the key overarching questions of the text – What
is justice? And Is a just life happier than an unjust life? – but also highlights some fascinating,
overlooked passages which contribute to our understanding of Plato's philosophical thought. Plato's
'Republic': An Introduction offers a rigorous and thought-provoking analysis of the text, helping
readers navigate one of the world's most influential works of philosophy and political theory. With its
approachable tone and clear presentation, it constitutes a welcome contribution to the field, and will
be an indispensable resource for philosophy students and teachers, as well as general readers new to,
or returning to, the text.

Mathematics Of Autonomy: Mathematical Methods For Cyber-physical-cognitive Systems Pilling
Michael J, Ivancevic Vladimir G, Reid Darryn J, 2017-10-30 Mathematics of Autonomy provides solid
mathematical foundations for building useful Autonomous Systems. It clarifies what makes a system
autonomous rather than simply automated, and reveals the inherent limitations of systems currently
incorrectly labeled as autonomous in reference to the specific and strong uncertainty that
characterizes the environments they operate in. Such complex real-world environments demand truly
autonomous solutions to provide the flexibility and robustness needed to operate well within them.
This volume embraces hybrid solutions to demonstrate extending the classes of uncertainty
autonomous systems can handle. In particular, it combines physical-autonomy (robots), cyber-
autonomy (agents) and cognitive-autonomy (cyber and embodied cognition) to produce a rigorous
subset of trusted autonomy: Cyber-Physical-Cognitive autonomy (CPC-autonomy). The body of the
book alternates between underlying theory and applications of CPC-autonomy including Autonomous
Supervision of a Swarm of Robots, Using Wind Turbulence against a Swarm of UAVs and Unique
Super-Dynamics for All Kinds of Robots (UAVs, UGVs, UUVs and USVs) to illustrate how to effectively
construct Autonomous Systems using this model. It avoids the wishful thinking that characterizes
much discussion related to autonomy, discussing the hard limits and challenges of real autonomous
systems. In so doing, it clarifies where more work is needed, and also provides a rigorous set of tools
to tackle some of the problem space. Contents: Introduction Physics of the CPC-Autonomy: Port-
