Must-See Sci-fi Sloan De Forest,2018-05-01 Spanning nine decades and branded by the most trusted authority on film, Turner Classic Movies: Must-See Sci-Fi showcases 50 of the most shocking, weird, wonderful, and mind-bending movies ever made. From *A Trip to the Moon* (1902) to *Arrival* (2016), science fiction cinema has produced a body of classics with a broader range of styles, stories, and subject matter than perhaps any other film genre. They are movies that embed themselves in the depths of the mind, coloring our view of day-to-day reality and probably fueling a few dreams (and nightmares) along the way. In Turner Classic Movies: Must-See Sci-Fi, fifty unforgettable films are profiled, including beloved favorites like *The Day the Earth Stood Still* (1951) and *Fantastic Voyage* (1966), groundbreaking shockers like *Planet of the Apes* (1968) and *Alien* (1979), and lesser-known landmarks like *Things to Come* (1936) and *Solaris* (1972). Illustrated by astounding color and black-and-white images, the book presents the best of this mind-bending genre, detailing through insightful commentary and behind-the-scenes stories why each film remains essential viewing. A perfect gift for any film buff or sci-fi fanatic!

101 Sci-Fi Movies You Must See Before You Die Steven Jay Schneider,2009 Can you tell your Dagobah from your Delos and your Ming from your Morlock? Do you need help understanding *2001: A SPACE ODYSSEY*? From the classic low-budget Flash Gordon tales to the slick CGI-realised world of *THE MATRIX*, science-fiction films have long pushed the boundaries of the visually and dramatically fantastic. *101 SCI-FI MOVIES YOU MUST SEE BEFORE YOU DIE* is your perfect one-stop guide to them all. Science fiction allows every other movie genre to leap - quite literally - into another dimension. Take a classic police chase and set it on Mars. Create a haunted house story, then add the robots. Take the classic boy-meets-girl story, then make them mutants. Great sci-fi movies turn the known world onto its head, play with the laws of physics and all the while hold the viewer spellbound with a gripping vision of future worlds. With insight from critics, film historians, and academics, *101 SCI-FI MOVIES YOU MUST SEE BEFORE YOU DIE*, applies knowledge and passion to a century of close encounters, distant planets, time travel, black holes, strange outfits, futuristic technology, inexplicable forces, fantastic spaceships, fluorescent drinks and subterranean societies. Strap yourself in: you're set for a rocket ride to sci-fi heaven.

Science Fiction Film J. P. Telotte,2001-09-24 Examines one of the most enduring genres of Hollywood cinema: the science fiction film.

Robot Ecology and the Science Fiction Film J. P. Telotte,2016-01-22 This book offers the first specific application in film studies of what is generally known as ecology theory, shifting attention from history to the (in this case media) environment. It takes the robot as its subject because it has attained a status that resonates not only with some of the key concerns of contemporary culture over the last century, but also with the very nature of film. While the robot has given us a vehicle for exploring issues of gender, race, and a variety of forms of otherness, and increasingly for asking questions about the very nature and meaning of life, this image of an artificial being, typically anthropomorphic, also invariably implicates the cinema's own and quite fundamental artificing of the human. Looking across genres, across specific media forms, and across closely linked conceptualizations, Telotte sketches a context of interwoven influences and meanings. The result is that this study of the cinematic robot, while mainly focused on science fiction film, also incorporates its appearance in, for example, musicals, cartoons, television, advertising, toys, and literature.

A Carousel of Sorts Grant Guimont,2001-06 *A Carousel of Sorts* is a dizzying leap into the shallow end of the pool of life. The story embraces the enormity of the world and the underlying idiosyncrasies that connect us all in the end. And perhaps along the way, on the wings of the fabled Carik birds from the tale, some of those answers will appear somewhere amidst the infinite spectrum between Bob Dylan's song lyrics and the ingredients to Cocoa

Puffs cereal. Sawyer Redwine, happens upon his own chance at redemption by stumbling into the life of Ashton James during a robbery. They hightail their lives across country in order to create a fresh start careening into Blaiku "Willy" Williams, the final piece in this triangle of fate. From the festive weirdness of a religious carnival located in Iowa to the eccentric values of a cosmetics mogul in Minneapolis, the triumvirate's journey unfolds under a tabloid, fashion reporter's eyes. Interwoven in the trio's new America are an angel who appears to be Ted Nugent, a Mafia hitman trying to become a rodeo clown, an elderly woman who speaks only through Hallmark cards, and an obsessive narrator with a bloated ego and a magically spiked six-pack of beer.

The Rise and Fall of American Science Fiction, from the 1920s to the 1960s Gary Westfahl, 2019-10-04 By examining important aspects of science fiction in the twentieth century, this book explains how the genre evolved to its current state. Close critical attention is given to topics including the art that has accompanied science fiction, the subgenres of space opera and hard science fiction, the rise of SF anthologies, and the burgeoning impact of the marketplace on authors. Included are in-depth studies of key texts that contributed to science fiction's growth, including Philip Francis Nowlan's first Buck Rogers story, the first published stories of A. E. van Vogt, and the early juveniles of Isaac Asimov, Arthur C. Clarke and Robert Heinlein.

Art, Performance, Media Nicholas Zurbrugg, 2004 Over the course of fifteen years, Nicholas Zurbrugg interviewed the avant-garde poets, filmmakers, dancers, writers, composers, and performance artists who were defying tradition, crossing genres, and forever changing how art would be created, performed, and interpreted. These conversations with thirty-one of the leading multimedia artists in the United States now form a comprehensive record, from the insiders' perspectives, of the most vital component of the postmodern American art world. Passionate about postmodernism and committed to innovative creativity, Zurbrugg asks these artists probing and insightful questions. How did their work evolve? Who most influenced them? How did they assess changes in contemporary art, and what did they think of each other's work? Which of their experiences had the most powerful effects on their creative development? What could lie ahead for American art? As these questions are answered by individual artists, the interviews also cumulatively address larger issues of artistic expression, including the idea of the avant-garde itself. The book features interviews with Kathy Acker, Charles Amirkhonian, Laurie Anderson, Robert Ashley, Beth B, David Blair, William S. Burroughs, Warren Burt, John Cage, Richard Foreman, Kenneth Gaburo, Diamanda Galas, John Giorno, Philip Glass, Brion Gysin, Dick Higgins, Jenny Holzer, Mike Kuchar, Robert Lax, Jackson Mac Low, Meredith Monk, Nam June Paik, Yvonne Rainer, Steve Reich, Rachel Rosenthal, Bill Viola, Larry Wendt, Emmett Williams, Robert Wilson, Nick Zedd, and Ellen Zweig. Introductory notes to each interview provide context and connect the work and experiences of various artists, and photographs of these artists contribute a significant visual element to the book. Nicholas Zurbrugg (1947-2001) was professor of English and cultural studies, as well as director of the Centre of Contemporary Arts, at De Montfort University in Leicester, England. He is the author of *The Parameters of Postmodernism and Critical Vices: The Myths of Postmodern Theory*.

Selling Science Fiction Cinema J. P. Telotte, 2023-07-18 How science fiction films in the 1950s were marketed and helped create the broader genre itself. For Hollywood, the golden age of science fiction was also an age of anxiety. Amid rising competition, fluid audience habits, and increasing government regulation, studios of the 1950s struggled to make and sell the kinds of films that once were surefire winners. These conditions, the leading media scholar J. P. Telotte argues, catalyzed the incredible rise of science fiction. Though science fiction films had existed since the earliest days of cinema, the SF genre as a whole continued to resist easy definition through the 1950s. In grappling with this developing genre, the industry began to consider new marketing approaches that viewed films as fluid texts and audiences as ever-changing. Drawing on trade reports, film reviews, pressbooks, trailers, and other archival materials, *Selling Science Fiction Cinema* reconstructs studio efforts to market a promising new genre and, in the process, shows how salesmanship influenced what that genre would become. Telotte uses such films as *The Thing from Another World*, *Forbidden Planet*, and *The Blob*, as well as the influx of Japanese monster movies, to explore the shifting ways in which the industry reframed the SF genre to market to no-longer static audience expectations. Science fiction transformed the way Hollywood does business, just as Hollywood transformed the meaning of science fiction.

Movies, Modernism, and the Science Fiction Pulps J. P. Telotte, 2019-07-11 What impact did the new art of film have on the development of another new art, the emerging science fiction genre, during the pre- and early post-World War II era? Focusing on such popular pulp magazines as *Amazing Stories*, *Astounding Stories*, and *Wonder Stories*, this book traces this early relationship between film and literature through four common features: stories that involve film or the film industry; film-related advertising; editorial matters and readers' letters commenting on film; and the magazines' heralded cover and story illustrations. By surveying these haunting traces of another medium in early science fiction discourse, we can begin to see the key role that a cinematic mindedness played in this formative era and to expand the early history of science fiction as a cultural idea

beyond the usual boundaries that have been staked out by its literary manifestations and the genre's historians.

The Sci-Fi Movie Guide Chris Barsanti, 2014-09-22 Once upon a time, science fiction was only in the future. It was the stuff of drive-ins and cheap double-bills. Then, with the ever-increasing rush of new, society-altering technologies, science fiction pushed its way to the present, and it busted out of the genre ghetto of science fiction and barged its way into the mainstream. What used to be mere fantasy (trips to the moon? Wristwatch radios? Supercomputers capable of learning?) are now everyday reality. Whether nostalgic for the future or fast-forwarding to the present, *The Sci-Fi Movie Guide: The Universe of Film from Alien to Zardoz* covers the broad and widening range of science-fiction movies. From the trashy to the epic, from the classics to today's blockbusters, this cinefile's guidebook reviews nearly 1,000 of the biggest, baddest, and brightest from every age and genre of cinematic and TV science fiction. You'll find more than just Star Wars, Star Trek, and Transformers, with reviews on many overlooked and under-appreciated gems and genres, such as ... • Monsters! Pacific Rim, Godzilla, The Thing, Creature from the Black Lagoon • Superheroes: Thor, Iron Man, X-Men, The Amazing Spider-man, Superman • Avant-garde masterpieces: Solaris, 2001, Brazil • and many, many more categories and movies!!

The Documentary Film Makers Handbook Genevieve Jolliffe, Andrew Zinnes, 2006-11-14 Documentary films have enjoyed a huge resurgence over the last few years, and there's a new generation of filmmakers wanting to get involved. The book also includes in-depth case studies of some of the most successful and acclaimed documentary films of recent years, including *Mad Hot Ballroom*, *Born Into Brothels*, *Touching the Void*, *Beneath the Veil*, and *Amandla!* *The Documentary Film Makers Handbook* will be an essential resource for anyone who wants to know more about breaking into this exciting field.

Neuroscience in Science Fiction Films Sharon Packer, M.D., 2014-11-19 As the gap between science fiction and science fact has narrowed, films that were intended as pure fantasy at the time of their premier have taken on deeper meaning. This volume explores

neuroscience in science fiction films, focusing on neuroscience and psychiatry as running themes in SF and finding correlations between turning points in “neuroscience fiction” and advances in the scientific field. The films covered include The Strange Case of Dr. Jekyll and Mr. Hyde, The Island of Dr. Moreau, Robocop, The Stepford Wives, The Mind Snatchers and iconic franchises like Terminator, Ironman and Planet of the Apes. Examining the parallel histories of psychiatry, neuroscience and cinema, this book shows how science fiction films offer insightful commentary on the scientific and philosophical developments of their times.

Trailblazing Medicine Erik Seedhouse, 2011-05-05 Space medicine has been an important component of the success of human spaceflight and will continue to play a critical role in the future ventures. To prepare for the day when astronauts will leave low Earth orbit for long-duration exploration missions, space medicine experts must develop a thorough understanding of the effects of microgravity on the human body, as well as ways of mitigating these effects. To gain a complete understanding of the effects of space on the human body and to create the tools and technologies required for successful exploration, space medicine will become an increasingly collaborative discipline incorporating the skills of physicians, biomedical scientists, engineers, and mission planners. In this work, Dr. Erik Seedhouse examines the future of space medicine in relation to human space exploration. He describes what is necessary to keep a crew alive in space, how it will be accomplished in the future, and the medical challenges faced by interplanetary astronauts. The book is divided into three sections. The first looks at space medicine on board the ISS, where astronaut stays are often of long duration. The second section considers the Exploration Class medical dangers, beginning with radiation and the consequent Acute Radiation Syndrome (ARS). The final section looks at future developments and the importance of telemedicine and how revolutionary technologies will protect interplanetary astronauts from the space environment. The book ends with a description of the kind of hibernation necessary to insure the well being of interplanetary astronauts.
