Laboratory Life Bruno Latour, Steve Woolgar, 2013-04-04 This highly original work presents laboratory science in a deliberately skeptical way: as an anthropological approach to the culture of the scientist. Drawing on recent work in literary criticism, the authors study how the social world of the laboratory produces papers and other texts, 'and how the scientific vision of reality becomes that set of statements considered, for the time being, too expensive to change. The book is based on field work done by Bruno Latour in Roger Guillemin's laboratory at the Salk Institute and provides an important link between the sociology of modern sciences and laboratory studies in the history of science.

Teaching Lab Science Courses Online Linda Jeschofnig, Peter Jeschofnig, 2011-02-02 Teaching Lab Science Courses Online is a practical resource for educators developing and teaching fully online lab science courses. First, it provides guidance for using learning management systems and other web 2.0 technologies such as video presentations, discussion boards, Google apps, Skype, video/web conferencing, and social media networking. Moreover, it offers advice for giving students the hands-on "wet laboratory" experience they need to learn science effectively, including the implications of implementing various lab experiences such as computer simulations, kitchen labs, and commercially assembled at-home lab kits. Finally, the book reveals how to get administrative and faculty buy-in for teaching science online and shows how to negotiate internal politics and assess the budget implications of online science instruction.

Cultural, Social, and Political Perspectives in Science Education Kathrin Otnel-Cass, Martin Krabbe Sillasen, Auli Arvola Orlander, 2017-10-20 This book presents a collection of critical thinking that concern cultural, social and political issues for science education in the Nordic countries. The chapter authors describe specific scenarios to challenge persisting views, interrogate frameworks and trouble contemporary approaches to researching teaching and learning in science. Taking a point of departure in empirical examples from the Nordic countries the collection of work is taking a critical sideways glance at the Nordic education principles. Critical examinations target specifically those who are researching in the fields of science education research to question whether conventional research approaches, foci and theoretical approaches are sufficient in a world of science education that is neither politically neutral, nor free of cultural values. Attention is not only on the individual learner but on the cultural, social and political conditions and contexts in science education. The different chapters review debates and research in teacher education, school teaching and learning including when external stakeholders are involved. Even though the chapters are contextualized in Nordic settings there will be similarities and parallels that will be informative to the international science education research community.

Science Lab in a Supermarket Bob Friedhoffer, 2018-10-08 You probably don't think of a supermarket as a science laboratory. After all, you go to a supermarket to buy food, cleaning supplies, or paper products-not to conduct experiments. The truth is every aisle, shelf, nook, and cranny of a supermarket could be the source of a scientific wonder. All you have to do is take the time to look around and use your imagination. Items found in the produce aisle can teach you about biology. The aisle with cleaning products offers all kinds of lessons in chemistry. The dairy aisle can teach you something about science too. Wherever you look, you can study the sciences. The order and location of the aisles and the arrangement of the shelves have all been carefully designed to get customers to buy as much as possible. The strategies used by supermarket designers are based on the science of psychology, which looks at the behavior of human beings. Scattered throughout this book you will find a safety symbol. Ask an adult to help you whenever you see this symbol. The symbol indicates that an experiment is a little bit dangerous or difficult. I'd hate to see you get discouraged or hurt while you are learning about science in a supermarket.

Out of the Lab and On the Market Tetsu Natsume, Mario Tokoro, 2017-07-14 Tetsu Natsume of Sony Computer Science Labs (Sony CSL) has been pioneering technology promotion for a decade. As he seeks marketplace opportunities for ground-breaking research, he plays the role of a Technology Producer -- a role that will be increasingly important as organizations seek optimally efficient

and effective applications of basic research. Natsume's task has been greatly facilitated by his association with Sony CSL, a research lab founded by co-author Mario Tokoro. While CSL is owned by SONY, it nevertheless operates almost entirely independently. At CSL, a diverse, cosmopolitan group of talented researchers are free to explore any idea that might one day change the world. Natsume's task is to optimise that process by identifying the best path to the market for the new insights that pour out of CSL. Functioning somewhat like a movie producer, Natsume has blazed a trail for technology promoters the world over. He explains his techniques for overcoming challenges and embracing opportunities. His 10 core principles of technology promotion, which offer the reader an especially valuable framework for moving between the very different worlds of the lab and the marketplace, cover the importance of appropriate timing, speed, commitment and mindset, while being rigorously simple and boldly ambitious. This book is an eye-opening primer for anyone interested in realising and optimising the commercial value of basic research.

Lab Lit Olga Pilkington, Ace G. Pilkington, 2019-10-10 This book introduces and explores a new genre, lab lit. Essays both discuss lab lit novels using a variety of analytical approaches as well as provide a theoretical framework to explore the social and literary backgrounds of the genre.

The Lab Book Darren Wershler, Lori Emerson, Jussi Parikka, 2022-03-22 An important new approach to the study of laboratories, presenting a practical method for understanding labs in all walks of life From the "Big Science" of Bell Laboratories to the esoteric world of séance chambers to university media labs to neighborhood makerspaces, places we call "labs" are everywhere—but how exactly do we account for the wide variety of ways that they produce knowledge? More than imitations of science and engineering labs, many contemporary labs are hybrid forms that require a new methodological and theoretical toolkit to describe. The Lab Book investigates these vital, creative spaces, presenting readers with the concept of the "hybrid lab" and offering an extended—and rare—critical investigation of how labs have proliferated throughout culture. Organized by interpretive categories such as space, infrastructure, and imaginaries, The Lab Book uses both historical and contemporary examples to show how laboratories have become fundamentally connected to changes in the contemporary university. Its wide reach includes institutions like the MIT Media Lab, the Tuskegee Institute's Jesup Wagon, ACTLab, and the Media Archaeological Fundus. The authors cover topics such as the evolution and delineation of lab-based communities, how labs' tools and technologies contribute to defining their space, and a glossary of key hybrid lab techniques. Providing rich historical breadth and depth, The Lab Book brings into focus a critical, but often misunderstood, aspect of the contemporary arts and humanities.

Cultural Diversity and Discourse Practices in Grade Nine Lynne V Wiltse, 2017-07-28 In the classroom, knowledge is widely distributed among the students and teacher, but is difficult to share across linguistic and cultural barriers. Seeking paths across these barriers, Lynne Wiltse meticulously explores the question: What is the discourse frame in which students and teachers work? Situated in a grade nine multilingual classroom, her work provides a rich description of the research process in the classroom. At the same time, she draws the reader sequentially through the

analysis, revealing inferences in increasing levels of abstraction within a framework of “communities of practice.” She highlights issues related to second language acquisition, students’ immigration experiences, teaching, and learning, and points the way toward multi-vocal dialogues and practices that can forge a path across cultural and linguistic divides.
