Shark Dean Crawford, 2008-08-01 A sleek hunter of the seas, the shark has struck fear into the hearts of men since the days of the first fishermen. Dean Crawford now explores here the long relationship between shark and man, revealing that behind the fearsome caricature is a complex animal that deserves a thoughtful reconsideration. With a lineage stretching back over 100 million years, the shark has evolved into 350 different species, from the great white to the pike-bearing goblin to the tiny cookie-cutter. Crawford compiles here a fascinating narrative that analyzes how and why the animal looms large in our cultural psyche. While sharks have played a prominent part in religion and mythology, they are more commonly perceived as deadly predators—in such films as *Jaws* and *Dr. No*—or as symbols of natural violence, as in Hemingway's *Islands in the Stream*. *Shark* ultimately argues, however, that our ill-informed emotional responses, spurred by such representations, have encouraged the wholesale slaughter of sharks—and our ignorance endangers the very existence of the shark today. Both a celebration of their lethal

beauty and plea for their conservation, Shark urges us to shed our fears and appreciate the magnificence of this majestic animal.

Shark Attacks of New York Patricia Heyer, Robert Heyer, 2021-08-02 New York's crowded beaches can come to halt with the shout of a single word: shark! The shores of Long Island and Staten Island and the waters surrounding Manhattan have had more than thirty shark attacks recorded since the days of New Amsterdam. Legend has it that Antony Van Corlear, Peter Stuyvesant's trusted deputy, was killed by a shark crossing Spuyten Duyvil Creek while blowing his famed trumpet. In the summer of 1916, after a series of bloody encounters along the Jersey Shore, sharks terrorized beachgoers of Sheepshead Bay, frightening the entire region. Two incidents on Fire Island in 2018 within mere hours and miles of each other involved a twelve-year-old and a thirteen-year-old, striking fear in the hearts of parents. Authors Patricia and Robert Heyer chart the history of New York's

shark attacks.

A Preliminary Evaluation of the Status of Shark Species José Ignacio Castro, Christa M. Woodley, Rebecca L. Brudek, Food and Agriculture Organization of the United Nations, 1999 The status of shark species is reviewed based on the available data. A review of the history of shark fisheries demonstrates that intensive shark fisheries are not sustainable. Numerous problems are encountered in assessing shark populations: a general lack of biological and fishery data, lack of suitable models, and lack of validated age estimates. Sharks have an unusual combination of biological characteristics: slow growth and delayed maturation, long reproductive cycles, low fecundity and long life spans. These characteristics make them vulnerable to overfishing. A preliminary evaluation of the status of shark species is made on the basis of historical data, the reproductive potential of each species, and the level of exploitation of the species. In this document, exploited shark species are classified numerically according to their vulnerability. The majority of these species are listed as Category 1, indicating that there are not sufficient data to assess the species. Available data indicate that sharks are very vulnerable and are threatened by overexploitation in many parts of the world.

Shark Wars EJ Altbacker, 2011-06-14 Since the dawn of time, prehistoric shark clans called Shivers have ruled over the earth's oceans, fierce protectors of all who swim. For eons, the Big Blue has prospered under Shiver Law, and the delicate balance of sea life kept sacred. Until now. Rising sea temperatures and overfishing have caused food to become scarce, and the battle for new hunting grounds has brought with it corruption and warfare.

Now, with the ocean on the brink of chaos, a young reef shark named Gray - exiled from the safety of his peaceful reef home - must venture deep into Open Water to unlock the secrets of his destiny and bring peace back to the ocean. But first, he'll have to discover the truth about who - and what - he really is.

Sharks! Laurence Pringle, 2008-01-01 From the tiny cookiecutter to the great white, the world's oceans are home to hundreds of species of marvelous and mysterious sharks. There's the giant whale shark - longer than two school buses but gentle enough to swim with humans; and the swell shark, which can wedge itself into a hideout and then swell so that it cannot be pulled out. There are sharks that lay eggs and sharks that have live babies. Some are small enough to fit into the palm of your hand, and some have teeth bigger than your fist. Join acclaimed author Laurence Pringle on a fascinating exploration of the wide variety of fish classified as sharks. Together with Meryl Henderson's beautiful and realistic illustrations, young readers will be taken on an unforgettable journey deep under the sea.

Shark! Mike Strong, 2003 Explores the facts about sharks and shark attacks, including what these creatures are, how and on what they feed, and how much of a threat they pose to humans.
