*Saint Sergius of Radonezh, His Trinity Monastery, and the Formation of the Russian Identity* David B. Miller,2010-11-05 When Sergius of Radonezh founded a monastery near Moscow, his example spawned a movement of monastic foundations throughout Russia. Within three decades of his death in 1392, Sergius was recognized as a saint, and by 1450 many considered him the intercessor for the Russian land who freed its people from Mongol rule. Over the next century and a half, thousands sought St. Sergius' intercession with gifts to the monastery. Moscow's rulers made Sergius patron saint of their dynasty and of the Russian tsardom. By 1605, the Trinity-Sergius monastery was the biggest house in Russia. Miller presents Trinity's dramatic history from the fourteenth century to the beginning of the Time of Troubles. Using extensive archival materials, he traces the evolution of Trinity's relationship to Sergius' venerators and its traditions, governance, social composition, and the lifestyle of its members. In lucid prose, Miller argues that St. Sergius' cult and monastery became integrating forces on a national scale and vital elements in the forging of a Russian identity, economy, and cohesive society. The power of religion to shape national identity is a lively topic today, and Miller's study will interest both medievalists and modern historians, as well as readers of Orthodox Church history.

**The World of Applied Electromagnetics** Akhlesh Lakhtakia, Cynthia M. Furse, 2017-08-08 This book commemorates four decades of research by Professor Magdy F. Iskander (Life Fellow IEEE) on materials and devices for the radiation, propagation, scattering, and applications of electromagnetic waves, chiefly in the MHz-THz frequency range as well on electromagnetics education. This synopsis of applied electromagnetics, stemming from the life and times of just one person, is meant to inspire junior researchers and reinvigorate mid-level researchers in the electromagnetics community. The authors of this book are internationally known researchers, including 14 IEEE fellows, who highlight interesting research and new directions in theoretical, experimental, and applied electromagnetics.

*New Strategies in Locust Control* S. Krall, R. Peveling, B.D. Diallo, 2012-12-06 In the late eighties large-scale control operations were carried out to control a major desert locust upsurge in Africa. For the first time since the banning of organochlorine pesticides these operations relied mainly on non-persistent pesticides such as organophosphates and pyrethroids. The amount of pesticides sprayed and the area covered were probably the highest in the history of locust control and raised criticism with respect to efficacy, economic viability and environmental impact. As a consequence, applied research into the problem was intensified, both at the national and the international level, with the goal of finding new and environmentally sound approaches and solutions to locust and grasshopper control. Emphasis was laid on developing new control agents and techniques.

**Biological Control by Augmentation of Natural Enemies** R. Ridgway,2013-03-08 The protection of agricultural crops, forest, and man and his domestic animals from annoyance and

damage by various kinds of pests remains a chronic problem. As we endeavor to improve production processes and to develop more effective and acceptable tactics for achieving this protection, we must give high priority to all potentially useful techniques for the control and management of insects. Pest control is recognized as an acceptable and necessary part of modern agriculture. Methods employed vary greatly and tend to reflect compromises involving 3 determining factors: technological capability, economic feasibility, and social acceptability. However, these factors are also subject to change with time since each involves value judgments that are based on available information, cost, benefit considerations, the seriousness of the pest problem, and the political climate. Whatever method is chosen, energy resources continue to dwindle under the impact of increasing population, and it is inevitable that greater reliance must be placed upon renewable resources in pest management. One alternative is the use of a pest management method that uses the energy of the pest's own biomass to fuel a self-perpetuating control system. The use of biological control agents for the control of pests has long been an integral part of the pest management strategy in crop production and forestry and in the protection of man and animals. The importance and unique advantages of the method are well recognized; numerous treatises deal with accomplishments and methodologies.

**Females in the Frame** Penelope Jackson, 2020-05-16 This book is available in audiobook format, narrated by Kerry Fox:  
[https://www.audible.co.uk/pd/Females-in-the-Frame-Audiobook/B08PC6YSW1?asin=B08PC6YSW1&source\\_code=ASUOR22212112000M8](https://www.audible.co.uk/pd/Females-in-the-Frame-Audiobook/B08PC6YSW1?asin=B08PC6YSW1&source_code=ASUOR22212112000M8) This book explores the untold history of women, art, and crime. It has long been widely accepted that women have not played an active role in the art crime world, or if they have, it has been the part of the victim or peacemaker. *Women, Art, and Crime* overturns this understanding, as it investigates the female criminals who have destroyed, vandalised, stolen, and

forged art, as well as those who have conned clients and committed white-collar crimes in their professional occupations in museums, libraries, and galleries. Whether prompted by a desire for revenge, for money, the instinct to protect a loved one, or simply as an act of quality control, this book delves into the various motivations and circumstances of women art criminals from a wide range of countries, including the UK, the USA, New Zealand, Romania, Germany, and France. Through a consideration of how we have come to perceive art crime and the gendered language associated with its documentation, this pioneering study questions why women have been left out of the discourse to date and how, by looking specifically at women, we can gain a more complete picture of art crime history.

**The Silenced Media** E. Salminen, 1999-01-17 Focusing on freedom of speech, the book deals with the perennial problem of how a small country should react in the face of pressure threatening its sovereignty. Should it give way or resist? The author describes in detail how the Soviet Union operated both overtly and covertly in the propaganda war and discusses the reactions of the west - the United States, Great Britain, West Germany and Sweden.

*Transplantation of the Pancreas* Rainer W. G. Gruessner, Angelika C. Gruessner, 2023-10-23 Now in its fully revised and expanded second edition, this textbook remains the definitive resource on pancreas transplantation. Enlarged, updated and improved, it consists of 93 chapters over 11 sections, with chapter authors who are recognized international leaders in their fields and represent institutions from five continents. Since the publication of the original edition in 2004, substantial progress has been made in the field of pancreas transplantation, specifically in regard to

standardization of operative techniques and immunosuppression; significant improvements in patient and graft survival rates; and improved diagnosis and therapy of graft rejection and recurrence of disease. Pancreas transplants are no longer primarily performed in the USA and Europe for Type 1 diabetes mellitus; over the past 15 years, they have been performed with increasing frequency worldwide and also for Type 2 diabetes mellitus. The new edition of this textbook covers all aspects of pancreas transplantation: indications, recipient categories, surgical donor and recipient techniques, living donor transplantation, postoperative management and follow-up, post-transplant complications and malignancies, immunosuppression, treatment and diagnosis of rejection, impact on endocrine function and secondary complications of diabetes, recurrence of disease, quality of life, economic issues and overall outcome results. In addition, state-of-the art chapters focus on the classification, epidemiology and pathogenesis of Type 1 and 2 diabetes mellitus as well as on other beta-cell replacement therapies including islet auto- and allo-transplantation. This textbook is the primary reference on pancreas transplantation for transplant surgeons (established and in-training), pancreas and HPB surgeons, diabetologists, endocrinologists, gastroenterologists, pancreatologists and other health professionals with a focus on transplantation and diabetes (cardiologists, neurologists, urologists, ophthalmologists).
