Richard Taylor

Sliceforms John Sharp, 1995 Sliceform modelling is a technique which lies happily on the borders between art and mathematics. The models are made from intersecting sets of parallel planes which slot together in a clever way to generate interesting three-dimensional surfaces. In the fully open position the planes are at right angles and the surfaces are correctly defined, but all the models fold flat in two different ways, making them easy to store until they are wanted next time. When popped up, the play of light and shade on the planes creates objects of great beauty. The book includes a varied collection of eight models to cut out and make and a detailed explanation of how to generate the slices for models of your own. See also *Surfaces - Explorations with Sliceforms* for more detailed explanations and more templates.

Mastering HPCC Systems: Fundamentals of ETL Processing Richard Taylor, 2024-01-16 HPCC Systems is an Open Source Big Data supercomputing platform that is an alternative to the Hadoop and Spark worlds. The Mastering HPCC Systems series introduces the HPCC Systems platform to anyone interested in evaluating it for use on their own big data projects. It also expands the ECL programming knowledge of anyone already working with the platform. This Fundamentals of ETL Processing volume provides an introduction to the ECL language through hands-on working through the standard data ingest process common to all Big Data projects. It starts with acquiring data and importing it into the HPCC Systems platform. It then takes you through data exploration, cleaning, and standardization processes. It ends by using that transformed data to create a data product ready for delivery to end-users.

Ricco,David R. Walt,Charles L. Wilkins,2006-07-15 We have come to know that our ability to survive and grow as a nation to a very large degree depends upon our scientific progress. Moreover, it is not enough simply to keep abreast of the rest of the world in scientific matters. 1 We must maintain our leadership. President Harry Truman spoke those words in 1950, in the aftermath of World War II and in the midst of the Cold War. Indeed, the scientific and engineering leadership of the United States and its allies in the twentieth century played key roles in the successful outcomes of both World War II and the Cold War, sparing the world the twin horrors of fascism and totalitarian communism, and

fueling the economic prosperity that followed. Today, as the United States and its allies once again find themselves at war, President Truman's words ring as true as they did a half-century ago. The goal set out in the Truman Administration of maintaining leadership in science has remained the policy of the U.S. Government to this day: Dr. John Marburger, the Director of the Office of Science and Technology (OSTP) in the Executive Office of the President made remarks to that effect during his confirmation hearings in October 2 2001.

Parallel Merge Sort (Classic Reprint) Richard Cole, 2018-01-19 Excerpt from *Parallel Merge Sort* We give a parallel implementation of merge sort on a crew pram that uses 11 processors and $O(\log n)$ time; the constant in the running time is small. We also give a more complex version of the algorithm for the erew pram; it also uses n processors and $O(\log n)$ time. The constant in the running time is still moderate, though not as small. Time Slice Manipulation in Information Hierarchy Meichun Hsu, Stuart E. Madnick, ALFRED P SLOAN SCHOOL OF MANAGEMENT CAMBRIDGE MA CENTER FOR INFORMATION SYSTEMS RESEARCH., Sloan School of Management, 1987 This paper presents theoretical results on a generalized form of partial order, called hierarchical partial order, for enforcing serializability that takes advantage of transaction analysis in database systems. Transaction analysis partitions the database into data partitions that may assume a hierarchy of priorities, such that transactions primarily updating less critical data partitions will not interfere with transactions primarily updating the more critical data partitions, or will do so to a lesser extent than those in conventional systems.

This results from the ability for transactions in the system to access different data partitions using different synchronization protocols. The rules governing the different protocols are presented and their corrections with respect to serializability is proven.
