Algorithmic Thinking Daniel Zingaro, 2020-12-15 A hands-on, problem-based introduction to building algorithms and data structures to solve problems with a computer. Algorithmic Thinking will teach you how to solve challenging programming problems and design your own algorithms. Daniel Zingaro, a master teacher, draws his examples from world-class programming competitions like USACO and IOI. You'll learn how to classify problems, choose data structures, and identify appropriate algorithms. You'll also learn how your choice of data structure, whether a hash table, heap, or tree, can affect runtime and speed up your algorithms; and how to adopt powerful strategies like recursion, dynamic programming, and binary search to solve challenging problems. Line-by-line breakdowns of the code will teach you how to use algorithms and data structures like: The breadth-first search algorithm to find the optimal way to play a board game or find the best way to translate a book Dijkstra's algorithm to determine how many mice can exit a maze or the number of fastest routes between two locations The union-find data structure to answer

questions about connections in a social network or determine who are friends or enemies The heap data structure to determine the amount of money given away in a promotion The hash-table data structure to determine whether snowflakes are unique or identify compound words in a dictionary NOTE: Each problem in this book is available on a programming-judge website. You'll find the site's URL and problem ID in the description. What's better than a free correctness check?

**Algorithmic Thinking, 2nd Edition** Daniel Zingaro, 2024-01-23

Get in the game and learn essential computer algorithms by solving competitive programming problems, in the fully revised second edition of the bestselling original. (Still no math required!) Are you hitting a wall with data structures and algorithms? Whether you're a student prepping for coding interviews or an independent learner, this book is your essential guide to efficient problem-solving in programming. **UNLOCK THE POWER OF DATA STRUCTURES & ALGORITHMS:** Learn the intricacies of hash tables, recursion, dynamic programming, trees, graphs, and heaps. Become proficient in choosing and implementing the best solutions for any coding challenge. **REAL-WORLD, COMPETITION-PROVEN CODE EXAMPLES:** The programs and challenges in this book

aren't just theoretical—they're drawn from real programming competitions. Train with problems that have tested and honed the skills of coders around the world. GET INTERVIEW-READY: Prepare yourself for coding interviews with practice exercises that help you think algorithmically, weigh different solutions, and implement the best choices efficiently. WRITTEN IN C, USEFUL ACROSS LANGUAGES: The code examples are written in C and designed for clarity and accessibility to those familiar with languages like C++, Java, or Python. If you need help with the C code, no problem: We've got recommended reading, too. *Shaped by Snow* Ayja Bounous, 2019-11-19 Those who love winter will love this book. But as we steadily erase the season that sets us free from friction, *Shaped by Snow* will appeal to anyone who has ever looked up and thrilled at the first flakes fat in the autumn sky. —BILL MCKIBBEN Skier and debut author Ayja Bounous explores threats to the winters and watershed in the face of climate change and the far-reaching impacts of a diminishing

snowpack on the American West—not only from ecological and economic perspectives, but also in regard to emotional and psychological health, as she realizes how deeply her personal relationships are tied to the snow-covered mountains of Utah's Wasatch range. AYJA BOUNOUS is a Utah native and avid skier. She holds an MA in Environmental Humanities from the University of Utah and bachelor's degrees in Music and Environmental Studies from Santa Clara University. She lives in Salt Lake City, Utah.

**Medical Reasoning Erwin B. Montgomery Jr., 2018-10-17**

Modern medicine is one of humankind's greatest achievements. Yet today, frequent medical errors and irreproducibility in biomedical research suggest that tremendous challenges beset it.

Understanding these challenges and trying to remedy them have driven considerable and thoughtful critical analyses, but the apparent intransigence of these problems suggests a different perspective is needed. Now more than ever, when we see options and opportunities for healthcare expanding while resources are diminishing, it is extremely important that healthcare professionals practice medicine wisely. In *Medical Reasoning*, neurologist Erwin B. Montgomery, Jr. offers a new and vital perspective. He begins

with the idea that the need for certainty in medical decision-making has been the primary driving force in medical reasoning. Doctors must routinely confront countless manifestations of symptoms, diseases, or behaviors in their patients. Therefore, either there are as many different diseases as there are patients or some economical set of principles and facts can be combined to explain each patient's disease. The response to this epistemic conundrum has driven medicine throughout history: the challenge is to discover principles and facts and then to develop means to apply them to each unique patient in a manner that provides certainty. This book studies the nature of medical decision making systematically and rigorously in both an analytic and historical context, addressing medicine's unique need for certainty in the face of the enormous variety of diseases and in the manifestations of the same disease in different patients. The book also examines how the social, legal, and economic circumstances in which medical decision-making occurs greatly influence the nature of medical reasoning. Medical Reasoning is essential for those at the intersection of healthcare and philosophy.

*Real and Phantom Pains* ,2014-10-09 An anthology of ten plays embodying the Russian literary movement that began in the late twentieth century. The plays selected for this anthology reflect the issues and styles typical of the new wave of dramatic writing in Russia. New drama flourished (almost) exclusively in small spaces, often in dingy basements that employed and accommodated small numbers of people. The big theaters largely turned a blind eye to what was happening on small stages and in backrooms in

playhouses, libraries, and community centers in a few chosen hot spots around Russia: primarily Moscow, Yekaterinburg and Togliatti. In many cases, they took actively hostile stances toward it. This would change, however. And by the beginning of the century's second decade, new drama was threatening to become a mainstream phenomenon. Not every theater staged plays associated with new drama, but almost every one began staging plays influenced by the themes, methods, and language of the new drama movement. Featuring work from Yury Klavdiev, Olga Mukhina, Pavel Pryazhko, Vasily Sigarev, Maksym Kurochkin, Mikhail Durnenkov, Vyacheslav Durnenkov, Yaroslava Pulinovich, Yelena Gremina, and Maxim Osipov. "Few people know more about what is happening on the Moscow scene than John Freedman (including few Russians). As Moscow Times theater critic throughout the post-Soviet period John could well have seen more theatrical productions in Russia than anyone else. I can't imagine anyone who would do a better job." —Blair A. Ruble, Director, Program on Global Sustainability & Resilience, Woodrow Wilson Center "While other existing volumes focus on 18th, 19th, and early 20th century Russian drama, Freedman's edition would present the unique and important contributions of the new

generation of Russian writers portraying the realities and experiences of a post-Soviet generation. John has carefully selected a representative cohort of ten of the most visible, productive, and influential of these writers for the volume.”
