Island Fantasia Wei-Ping Lin,2021-10-07 The Matsu archipelago between China and Taiwan, for long an isolated outpost off southeast China, was suddenly transformed into a military frontline in 1949 by the Cold War and the Communist-Nationalist conflict. The army occupied the islands, commencing more than 40 long years of military rule. With the lifting of martial law in 1992, the people were confronted with the question of how to move forward. This in-depth ethnography and social history of the islands focuses on how individual citizens redefined themselves and reimagined their society. Drawing on long-term fieldwork, Wei-Ping Lin shows how islanders used both traditional and new media to cope with the conflicts and trauma of harsh military rule. She discusses the formation of new social imaginaries through the appearance of 'imagining subjects', interrogating their subjectification processes and varied uses of mediating technologies as they seek to answer existential questions. Lightspeed John C. H. Spence,2019-10-14 This book tells the human story of one of man's greatest intellectual adventures - how it came to be understood that light travels at a finite speed, so that when we look up at the stars, we are looking back in time. And how the search for a God-given absolute frame of reference in the universe led most improbably to Einstein's most famous equation $E=mc^2$, which represents the energy that powers the stars and nuclear weapons. From the ancient Greeks measuring the solar system, to the theory of relativity and satellite navigation, the book takes the reader on a gripping historical journey. We learn how Galileo discovered the moons of Jupiter and used their eclipses as a global clock, allowing travellers to find their Longitude. And how Ole Roemer, noticing that the eclipses were a little late, used this to obtain the first measurement of the speed of light, which takes eight minutes to get to us from the sun. We move from the international collaborations to observe the Transits of Venus, including Cook's voyage to Australia, to

the achievements of Young and Fresnel, whose discoveries eventually taught us that light travels as a wave but arrives as a particle, and all the quantum weirdness which follows. In the nineteenth century, we find Faraday and Maxwell, struggling to understand how light can propagate through the vacuum of space unless it is filled with a ghostly vortex Aether foam. We follow the brilliantly gifted experimentalists Hertz, discoverer of radio, Michelson with his search for the Aether wind, and Foucault and Fizeau with their spinning mirrors and lightbeams across the rooftops of Paris. Messaging faster than light using quantum entanglement, and the reality of the quantum world, conclude this saga.

Ships and Shipbuilders Fred M Walker, 2010-05-05 In the past three centuries the ship has developed from the relatively unsophisticated sail-driven vessel which would have been familiar to the sailors of the Tudor navy, to the huge motor-driven container ships, nuclear submarines and vast cruise liners that ply our seas today. Who were the innovators and builders who, during that span of time, prompted and instigated the most significant advances? In the past three centuries the ship has developed from the relatively unsophisticated sail-driven vessel which would have been familiar to the sailors of the Tudor navy, to the huge motor-driven container ships, nuclear submarines and vast cruise liners that ply our seas today. Who were the innovators and builders who, during that span of time, prompted and instigated the most significant advances? In this new book the author describes the lives and deeds of more than 120 great engineers, scientists, philosophers, businessmen, shipwrights, naval architects and inventors who shaped ship design and shipbuilding world wide. Covering the story chronologically, and going back briefly even to Archimedes, such well-known names as Anthony Deane, Peter the Great, James Watt, Robert Fulton and Isambard Kingdom Brunel share space with lesser known characters like the luckless Frederic Sauvage, a pioneer of screw propulsion who, unable to interest the French navy in his tests in the early 1830s, was bankrupted and landed in debtor's prison. With the inclusion of such names as Ben Lexcen, the Australian yacht designer who developed the controversial winged keel for the 1983 America's Cup, the story is brought right up to date. Concise linking chapters place all these innovators in context so that a clear and fascinating history of the development of ships and shipbuilding emerges from the pages. An original and important new reference book.

The Global Seafarer T. Alderton, Seafarers International Research Centre, International Labour Office, 2004 This volume offers a systematic account of the effects of globalization on the shipping industry and seafarers' lives. The seafarers' labor market is changing rapidly and this study discusses the challenges encountered in recruitment practices, trade unions, and collective bargaining, as well as training, certification, and fraudulent certification. Wages, contracts, and tours of duty are also investigated, and the book includes in-depth treatment of seafarer safety and hazard exposure. Innovations such as automated engine rooms and the global maritime distress and safety system, the internationalization of ship registrations, multinational crewing and reductions in crewing levels, and the rise in ship management companies have had a profound effect on seafarers' living and working conditions. This perceptive book examines these and future issues for regulation and enforcement.

Secret Flotillas Brooks Richards,2004-08-02 With the fall of France, almost the entire coastline of Western Europe was in German hands. Clandestine sea transport operations provided lines of vital intelligence for wartime Britain. These 'secret flotillas' landed and picked up agents in and from France, and ferried Allied evaders and escapees. This activity was crucial to the SIS (Secret Intelligence Service) and the SOE (Special Operations Executive). This authoritative publication by the official historian, the late Sir Brooks Richards, vividly describes and analyses the clandestine naval operations that took place during World War Two.
