Why does milk, when added to tea, look like billowing storm clouds? The only living planet we know of, it also has a very unusual moon, a remarkably dynamic surface, a complex atmosphere and a deeply mysterious interior. This is Planet Earth is dedicated to the wonders of Planet Earth. Its past is long and dramatic and its future shrouded in mystery. Yet despite centuries of research, only now are we starting to understand Earth's complexity.

**MITIGATING CLIMATE CHANGE: THE POWER OF "WE THE PEOPLE"** Adeniyi A. Afonja, 2020-06 Climate change is real and there are many natural processes that have caused severe changes over millions of years. Fertile land has transformed into deserts; some dry lands today were at one time under water and many places covered by water currently were dry lands. 'We the People' are not the cause of climate change but many of our activities are compromising the natural control processes of the Human Environment Systems: energy production and use; agriculture and land use; deforestation, prolific lifestyles that leave large carbon footprints. The pressure is on governments worldwide to mitigate climate change but 'We the People' hold the ace: we use most of energy and consume most of the products of agriculture, and our excesses are fueling demand for even more energy; we fund the energy companies through our stocks and share investments and can moderate their excesses; we elect the politicians and can influence their policies; and, through mass actions, we have surmounted governments in many places or forced changes in policies; we have the formidable weapon of the social media to effect change without stepping out. The Climate Change Mitigation Movement is already in motion but 'We the People' also need to moderate our choices and lifestyles in order to move the world to carbon neutrality which is a prerequisite for a sustainable environment.

**The Science of Spin** Roland Ennos, 2023-07-18 A clear and captivating work of popular science that explains rotational force—a basic driver of the universe affecting everything from the cosmos to our own bodies—from the masterful author of *The Age of Wood*. From the time women first used rotating bobbins to twist thread and men whirled slings around their heads to throw stones, people have found spin fascinating and baffling in equal measure. Now, in *The Science of Spin*, Roland Ennos shows how rotational motion dominates the workings of the world around us. It has shaped the solar system, galaxies, and black holes. It controls our climate and weather—from the pattern of trade winds through to the local formation of hurricanes and tornadoes. Harnessing the power of spin helped launch civilization, from the first developments of the wheel to the systems that now power the industrial world—propellers, turbines, centrifugal pumps, and electric motors. Even our own bodies are complex systems of rotating joints and levers. But scientists have a tendency to ignore the simple and straightforward. So, 17th-century scientists developed the science of mechanics to explain the phenomenon of the orbit of the planets rather than how machines work. And Newton's laws have actually limited our understanding of spin because they focus on linear motion rather than on an intuitive grasp of rotation. As a result, few people realize how spin makes our planet habitable, or how it has been tamed by engineers to make our lives more comfortable. In a lively and engaging style, Ennos presents a new approach to mechanics that not only helps us better understand the world, but also reveals unlikely links between tightrope walkers and tyrannosaurs, catapults and tennis players, stunt cars and long jumpers. By opening our minds, he shows how we can all learn to move about more gracefully, play sports more successfully and safely—and ensure that, like cats, we always land on our feet. A highly entertaining and informative read, whether it be natural or engineered, spin is what really makes the world go round.
