The Spinner's Book of Fleece Beth

Smith, 2014-08-23 The characteristics of fleece – its structure, grease content, and fiber diameter – vary widely depending on the breed of sheep the fleece comes from. In this comprehensive guide, Beth Smith profiles 21 types of fleece, from bouncy and pliant to lacy and lightweight. A sheep-by-sheep reference describes the best way to wash and spin each fleece into rich, soft yarn. You'll soon be confidently choosing the right fleece, spinning it to perfection, and enjoying the perfect yarn for your next fiber creation.

SPIN Model Checking and Software Verification

Klaus Havelund, John Penix, Willem Visser, 2006-12-31

The SPIN workshop is a forum for researchers interested in the subject of automata-based, explicit-state model checking technologies for the analysis and verification of asynchronous concurrent and distributed systems. The SPIN - model checker

(<http://netlib.bell-labs.com/netlib/spin/whatispin.html>), developed by Gerard Holzmann, is one of the best known systems of this kind, and has attracted a large user community. This can likely be attributed to its efficient state exploration algorithms. The fact that SPIN's modeling language, Promela, resembles a programming language has probably also contributed to its success. Traditionally, the SPIN workshops present papers on extensions and uses of SPIN. As an experiment, this year's workshop was broadened to have a slightly wider focus than previous workshops in that papers on software verification

were encouraged. Consequently, a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages. Solutions include translations from source code to Promela, as well as specially designed model checkers that accept source code. We believe that this is an interesting research direction for the formal methods community, and that it will result in a new set of challenges and solutions. Of course, abstraction becomes the key solution to deal with very large state spaces. However, we also see potential for integrating model checking with techniques such as static program analysis and testing. Papers on these issues have therefore been included in the proceedings.

Principles of the Spin Model Checker Mordechai Ben-Ari, 2008-04-13 This is the first introductory textbook on Spin, the only requirement is a background in programming. Spin models are written in the Promela language which is easily learned by students and programmers. Spin is easy to install and use. The Spin model checker is not only a widely used professional tool but it is also a superb tool for teaching important concepts of computer science such as verification, concurrency and nondeterminism. The book introduces Spin-based software that the author has developed for teaching. Complete programs demonstrate each construct and concept and these programs are available on a companion website.

Spinning, Dyeing and Weaving Penny

Walsh,2016-04-05 In this comprehensive book, an expert textile arts instructor reveals everything you need to know to make your own fabrics. In Self-Sufficiency: Spinning, Dyeing & Weaving, you will learn where different fibers come from, how to grow and harvest your own vegetable fibers, and how to prepare them for spinning. The principles of spindle and spinning wheel spinning are covered, along with home dyeing using natural dyestuffs, and hand weaving with or without a loom. Finally, there are a number of simple projects, such as a rug, shoulder bag, bed cover, jumper, and mitts to put your newly learned skills to the test.
