Story in the Stars Joe Amaral,2018-10-30 An in-depth look at the powerful story and symbolism behind God's unique design of our universe. Thousands of words have been written about the first ten words in the Bible: In the beginning, God created the heavens and the earth, a simple and profound statement that has ignited a firestorm of debate and controversy. People often only focus on the how and when of creation, but **Story in the Stars** explores the why. Why did God create such a vast

universe? Why did He choose the sun and moon to light our paths? Why did He design images with stars in the night sky? The Bible is very clear when it states that God created, named, and positioned all of the stars of the universe in their place in a very specific way-a way that tells us the greatest story ever to be told. In Luke 21:25 Jesus says, There will be signs in the sun, moon and stars. Signs are meant to point us towards something: Jesus. Story in the Stars takes an in-depth look at the Bible and all the signs God mapped out through constellations, planets, and even the way the Earth is tilted. We are uniquely designed by God, and He loves us so much that He ensured a way for all inhabitants of the earth, through all of time, to see the messages of salvation and redemption that He painted in the stars.

Constellations Chris Sasaki,2003 It's not always easy to find the 88 constellations, but this illustrated guidebook will lead you through the stars and make gazing at them a more meaningful experience. Two larger maps portray the entire northern and southern sky, and all the constellations in it. Because the stars put on different seasonal shows, another set charts the changes that take place

in the heavens during the year. Still more pictures present a close-up view of every single constellation, filled with detail. (You'll see an image of the real or imaginary creature it's named after, too.) And, there's so much great information accompanying the super visuals: facts on how far away the stars really are, other interstellar phenomena, the history of every constellation and how they got their names, and the best way to do your star searching. A Selection of Children's Book-of-the-Month Club.

Star Stories Anita Ganeri, 2019-07-02 Share the wonder of the stars with this delightful storybook collection featuring constellation myths from around the world. For thousands of years people have looked up to the night sky and told stories about the stars. These epic tales tell of vengeful gods and goddesses, of monsters and heroes. Others try to make sense of the natural world, or unravel the mysterious forces of the universe. This stunning book brings together 23 of these legends from all over the world: from Ancient Greece to North America, Egypt, China, India, and the South Pacific. Written by award-winning author Anita Ganeri and with beautifully detailed artwork by illustrator Andy Wilx, this

is a magical book to be treasured for generations to come.

Star Stories Anthony Aveni, 2019-10-22 Follow an epic animal race, a quest for a disembodied hand, and an emu egg hunt in constellation stories from diverse cultures We can see love, betrayal, and friendship in the heavens, if we know where to look. A world expert on cultural understandings of cosmology, Anthony Aveni provides an unconventional atlas of the night sky, introducing readers to tales beloved for generations. The constellations included are not only your typical Greek and Roman myths, but star patterns conceived by a host of cultures, non-Western and indigenous, ancient and contemporary. The sky has long served as a template for telling stories about the meaning of life. People have looked for likenesses between the domains of heaven and earth to help marry the unfamiliar above to the quotidian below. Perfect reading for all sky watchers and storytellers, this book is an essential complement to Western mythologies, showing how the confluence of the natural world and culture of heavenly observers can produce a variety of tales about the shapes in the sky.

Shooting at the Stars John Hendrix, 2014-10-07 Shooting at the Stars is the moving story of a

young British soldier on the front lines during World War I who experiences an unforgettable Christmas Eve. In a letter to his mother, he describes how, despite fierce fighting earlier from both sides, Allied and German soldiers ceased firing that evening and came together on the battlefield to celebrate the holiday. They sang carols, exchanged gifts, and even lit Christmas trees. But as the holiday came to a close, they returned to their separate trenches to await orders for the war to begin again. Award-winning creator John Hendrix wonderfully brings the story of the Christmas Truce of 1914 to life with his signature style, interweaving detailed illustrations and hand-lettered text. His telling of the story celebrates the humanity that can persist during even the darkest periods of our history.

Counting the Stars Lesa Cline-Ransome, 2019-10-08 “A detail-rich picture book.” —Kirkus Reviews
“Straightforward and inviting.” —School Library Journal From award-winning author Lesa Cline-Ransome and acclaimed illustrator Raúl Colón comes the sensitive, informative, and inspiring picture book biography of the remarkable mathematician Katherine Johnson, one of the NASA “human computers” whose work was critical to the first US space launch. Before John Glenn orbited the Earth or astronauts walked on the moon, a group of dedicated female mathematicians known as “human computers” used their knowledge, pencils, adding machines, and writing paper to calculate the orbital mechanics needed to launch spacecraft. Katherine Johnson was one of these mathematicians who used trajectories and complex equations to chart the space program. Even as Virginia’s Jim Crow laws were in place in the early 1950s, Katherine worked analyzing data at the NACA (later NASA) Langley laboratory. In 1962, as NASA prepared for the orbital mission of John Glenn, Katherine Johnson was called upon and John Glenn said “get the girl” (Katherine Johnson) to run the numbers by hand to

chart the complexity of the orbital flight. He knew that his flight couldn't work without her unique skills. President Barack Obama awarded Katherine Johnson the Presidential Medal of Freedom in 2015 and her incredible life inspired the Oscar-nominated film *Hidden Figures*. Get to know this incredible and inspirational woman with this beautifully illustrated picture book from an award-winning duo.

Miss Leavitt's Stars: The Untold Story of the Woman Who Discovered How to Measure the Universe (Great Discoveries) George Johnson, 2006-06-17 "A short, excellent account of [Leavitt's] extraordinary life and achievements."—Simon Singh, *New York Times Book Review* At the beginning of the twentieth century, scientists argued over the size of the universe: was it, as the astronomer Harlow Shapley argued, the size of the Milky Way, or was there more truth to Edwin Hubble's claim that our

own galaxy is just one among billions? The answer to the controversy—a “yardstick” suitable for measuring the cosmos—was discovered by Henrietta Swan Leavitt, who was employed by the Harvard Observatory as a number cruncher, at a wage not dissimilar from that of workers in the nearby textile mills. Miss Leavitt’s *Stars* uncovers her neglected history, and brings a fascinating and turbulent period of astronomical history to life.

This is the third in Black Dog & Leventhal's successful series including *The Story of the Orchestra* and *A Child's Introduction to Poetry*.

The book is organized alphabetically by constellation. Profiles of each constellation include basic information such as size, visibility, and number of stars, as well as information on the discovery and naming of the constellation and associated lore. Beyond details about the constellation itself is information about every astronomical event that took place or discovery made in the vicinity of the constellation. In the constellation of Cygnus (the Swan) we encounter the location

of the first confirmed black hole. A stop at Gemini (the Twins) is a chance to say hello to the dwarf planet Pluto, and in Orion (the hunter) we find the location of the first identified gamma-ray burst.
