How to Be Alone Tanya Davis,Andrea Dorfman,2013-10-22 Since its debut on YouTube, Tanya Davis's beautiful and perceptive poem *How to Be Alone*, visually realized by artist and filmmaker Andrea Dorfman, has become an international sensation. In this edition of *How to Be Alone*, they have adapted the poem and its compelling illustrations for the page in a beautiful, meditative volume—a keepsake to treasure and to share. From a solitary walk in the woods to sitting unaccompanied on a city park bench to eating a meal and even dancing alone, *How to Be Alone*, reveals the possibilities and joys waiting to be discovered when we engage in activities on our own. As she soothes the disquietude that accompanies the fear of aloneness, and celebrates the power of solitude to change how we see ourselves and the world, Tanya reveals how, removed from the noise and distractions of other lives, we can find acceptance and grace within. For those who have never been by themselves or those who embrace being on their own, *How to Be Alone* encourages us to recognize and embrace the possibilities of being alone—and reminds us of a universe of joy, peace, and discovery waiting to unfold.

Stop-Motion Puppet Sculpting Tom Brierton, 2004-07-30 Stop-motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills, including design, sculpting, metal work, mold making and casting, taxidermy, filmmaking, storytelling and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work explains research and design of puppets, and details the fabrication of stop-motion puppets around a metal armature skeleton using the build up and foam injection processes. The former technique uses pre-cut blocks of foam formed with a pair of scissors or other instrument into the shape desired and attaching them to the armature. In the latter technique, the character is sculpted in clay over the armature. This clay sculpture is then replaced with foam by using a plaster mold and injection gun techniques. Finishing techniques described include the making of hair, eyes, eyelids, teeth, horns, nails, and chitinous (insect-shell-like) surfaces. The manual also covers the process of creating replacement heads using rubber molds (such as RTV) and urethane castings. A glossary and bibliography complete the extensively illustrated work.
