Stop-Motion Armature Machining Tom Brierton, 2015-09-16

Stop-motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills, including design, sculpting, metal work, mold making and casting, taxidermy, filmmaking, storytelling and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work, with over 200 photographs and illustrations, demonstrates the construction of armatures for film industry stop-motion puppets and the technical aspects of how to machine metal into the desired shape. It describes in detail the milling machine and the metal lathe, the two main tools used in constructing the armature, other cutting tools, and how the anatomical makeup of the puppet determines the armature design. The book then examines the six main types of joints used in armature construction: the sandwich plate ball-and-socket

joint, the ball-and-socket collet joint, the step-block ball-and-socket joint, the swivel joint, the hinge joint, and the universal joint. Also described are the different types of metals used in armature construction.

Aardman Animations Annabelle Honess Roe,2020-02-06 The Bristol-based animation company Aardman is best known for its most famous creations Wallace and Gromit and Shaun the Sheep. But despite the quintessentially British aesthetic and tone of its movies, this very British studio continues to enjoy international box office success with movies such as Shaun the Sheep Movie, Flushed Away and Wallace and Gromit: Curse of the Were-Rabbit. Aardman has always been closely linked with one of its key animators, Nick Park, and its stop motion, Plasticine-modelled family films, but it has more recently begun to experiment with modern digital filmmaking effects that either emulate 'Claymation' methods or form a hybrid animation style. This unique volume brings together leading film and animation scholars with children's media/animation professionals to explore the production practices behind Aardman's creativity, its history from its early shorts to contemporary hits, how its films fit within traditions of British animation, social realism and fantasy cinema, the key personalities who have formed its ethos, its representations of 'British-ness' on screen and the implications of traditional animation methods in a digital era.

Stop-Motion Puppet Sculpting Tom Brierton, 2004-07-30 Stop-motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills, including design, sculpting, metal work, mold making and casting, taxidermy, filmmaking, storytelling and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work explains research and design of puppets, and details the fabrication of stop-motion puppets around a metal armature skeleton using the build up and foam injection processes. The former technique uses pre-cut blocks of foam formed with a pair of scissors or other instrument into the shape desired and attaching them to the armature. In the latter technique, the character is sculpted in clay over the armature. This clay sculpture is then replaced with foam by using a plaster mold and injection gun techniques. Finishing techniques described include the making of hair, eyes, eyelids, teeth, horns, nails, and chitinous (insect-shell-like) surfaces. The manual also covers the process of creating replacement heads using rubber molds (such as RTV) and urethane castings. A glossary and bibliography complete the extensively illustrated work.
