Klara and the Sun Kazuo Ishiguro, 2021-03-02 NEW YORK TIMES BESTSELLER •

Once in a great while, a book comes along that changes our view of the world. This magnificent novel from the Nobel laureate and author of *Never Let Me Go* is “an intriguing take on how artificial intelligence might play a role in our futures ... a poignant meditation on love and loneliness” (The Associated Press). • A GOOD MORNING AMERICA Book Club Pick! Here is the story of Klara, an Artificial Friend with outstanding observational qualities, who, from her place in the store, watches carefully the behavior of those who come in to browse, and of those who pass on the street outside. She remains hopeful that a customer will soon choose her. *Klara and the Sun* is a thrilling book that offers a look at our changing world through the eyes of an unforgettable narrator, and one that explores the fundamental question: what does it mean to love?

The Setting Sun Osamu Dazai, 1968-01-17 This powerful novel of a nation in social and moral crisis was first published by New Directions in 1956. Set in the early postwar years, it probes the destructive effects of war and the transition from a feudal Japan to an industrial society. Osamu Dazai died, a suicide, in 1948. But the influence of his book has made people of the setting sun a permanent part of the Japanese language, and his heroine, Kazuko, a young aristocrat who deliberately abandons her class, a symbol of the anomie which pervades so much of the modern world.

Lake of the Long Sun Gene Wolfe, 2015-08-25 It is the far future, and the giant spaceship, *The Whorl*, has travelled for forgotten generation towards its destination. Lit inside by the artificial Long Sun, *The Whorl* is so huge that you can see whole cities in the sky. And now the gods of *The Whorl* begin

to intervene in human affairs. A god speaks to Patera Silk, a clergyman at work in the schoolyard of his church. Silk must go on a quest to save his church and his people. Stylistic excellence and topnotch storytelling.-- Library Journal At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Michael Borremans: Fire from the Sun Michael Borremans, 2018-05-22 The first in a series of small-format publications devoted to single bodies of work, *Fire from the Sun* highlights Michaël Borremans's new work, which features toddlers engaged in playful but mysterious acts with sinister overtones and insinuations of violence. Known for his ability to recall classical painting, both through technical mastery and subject matter, Borremans's depiction of the uncanny, the perhaps secret, the bizarre, often surprises, sometimes disturbs the viewer. In this series of work, children are presented alone or in groups against a studio-like backdrop that negates time and space, while underlining the theatrical atmosphere and artifice that exists throughout Borremans's recent work. Reminiscent of cherubs in Renaissance paintings, the toddlers appear as allegories of the human condition, their archetypal innocence contrasted with their suggested deviousness. In his accompanying

essay, critic and curator Michael Bracewell takes an in-depth look into specific paintings, tackling both the highly charged subject matter and the masterly command of the medium. He writes, "The art of Michaël Borremans seems always to have been predicated on a confluence of enigma, ambiguity, and painterly poetics—accosting beauty with strangeness; making historic Romanticism subjugate to mysterious controlling forces that are neither crudely malevolent nor necessarily benign." Published on the occasion of Borremans's eponymous exhibition at David Zwirner in Hong Kong, this publication is available in both English-only and bilingual English/traditional Chinese editions.

Rebel Star Colin Stuart, 2019-10-03 A fascinating and comprehensive guide to the sun - our home star - which remains the greatest mystery in the solar system, and why understanding it is pivotal to our future existence here on Earth. In 1869, a great mystery was born. As astronomers observed a total solar eclipse, for the first time they saw the faint glow of the solar corona, the sun's outer atmosphere. Measurements of a previously unknown wavelength that made up this solar light sparked hot debate among scientists, but it was another sixty years before they discovered that this wavelength was in fact iron being burned at a staggering 3 million degrees Celsius. With the sun's surface only 6,000 degrees, this shouldn't be possible. What we now knew about the sun appeared to defy the laws of physics - and nature. But as well as being shrouded in intriguing mystery, the unpredictable nature of the sun's corona poses a serious threat to our life here on earth - the destructive potential of solar storms, caused by solar material travelling out into space at around 1 million miles an hour, is huge. Remaining beyond our reach until now, a new generation of ambitious solar missions are currently travelling closer to the sun than any previous spacecraft in history. As we enter this unprecedented era of heliophysics, there has never been a better time to get to grips with the workings of our home star.

Living with Our Sun's Ultraviolet Rays Arthur C. Giese, 2012-12-06 Sunlight is part of everyday life and we accept it as good-and good it is in a number of ways. The sun is our source of warmth, and of the light by which we see. It is, in fact, the source of the energy with which life continues on earth. It furnishes energy for photosynthesis, and the products of photosynthesis

constitute our food, building materials, and fuel. A steady state of balance and fine interrelationships exists between life on earth and all the forces and stresses in nature. This book will pin point the balance and relationships we share with sunlight. Our primary focus will be on the ultraviolet radiation of the sun, and on the ultraviolet photobiology of life on earth. This is the story of the effects of the sun's ultraviolet radiation, both good and bad, on all of us and all of life. We will explore the nature of the sun's ultraviolet radiation as it reaches the earth's surface today, and as it probably affected the earth in the distant past; and examine the effect of such radiation on all life, unicellular organisms as well as multicellular plants and animals. The effects of the sun's ultraviolet rays are primarily a result of their action upon cells, and secondarily, a result of their interactions between cells. The cell of a multicellular organism-man included-is also part of the tissue of an organ, and the organ is part of the whole organism.
