James Lavin

**Management Secrets of the New England Patriots: Achievements, personnel, teamwork, motivation, and competition** James Lavin, 2005 The definitive account of the 2001-2004 New England Patriots. Analyzes the many success factors underlying the team's two Super Bowl victories in three seasons. Entertains with humorous, insightful quotations from players, coaches, executives, and owners while helping fans vicariously experience life as a New England Patriot. Management Secrets is essential reading for any serious fan of Bill Belichick's Patriots and anyone seeking to build a great organization. (Vol. 1 covers the team's achievements, personnel, teamwork, motivation, and competition. Vol. 2 to be published February 2005.) James Lavin earned his economics Ph.D. at Stanford, where he analyzed high performance work organizations (like the Patriots). He also holds degrees in: political science (Harvard, magna cum laude), economics (London School of Economics), and East Asian studies (Stanford). James grew up in Wayland, MA cheering for many lousy Patriots teams.

**Invasive Species in a Globalized World** Reuben P. Keller, Marc W. Cadotte, Glenn Sandiford, 2014-11-24 Global trade and the spread of human populations have increasingly moved thousands of native animal and plant species across the natural barriers that have kept them ecologically separated for millions of years. Because some of them thrive in their new regions and harm the environment, the economy, and human health, the prevention and management of such invasive species has become a major local, national, and international policy initiative. Yet even though ecologists have been studying the negative (and sometimes positive) environmental impacts of invasive species and trying to curb their proliferation, and even though their work has in some cases stimulated public conversation and policy, politicians have generally ignored their recommendations. As a result, ecologists have achieved limited success in slowing the spread of invasives. They've been realizing that in order to fully characterize the impacts of these species, they need to engage with other relevant disciplines across the social and legal sciences as well as the humanities. Drawing together a wide variety of ecologists, historians, economists, legal scholars, policymakers, and communication scholars, *Invasive Species in a Globalized World* aims to facilitate a dialogue among these various disciplines in order to fully understand invasives and stop their spread. Addressing the numerous challenges associated with reducing invasive impacts, the contributors provide direct policy recommendations, strategies for communicating the risks of invasive species, and insight into how public discourse drives our response to these risks.

**Discounting and Intergenerational Equity** Paul R. Portney, John P. Weyant, 2013-10-18 The full effects of decisions made today about many environmental policies -including climate change and nuclear waste- will not be felt for many years. For issues with long-term ramifications, analysts often employ discount rates to compare present and future costs and benefits. This is reasonable, and discounting has become a procedure that raises few objections. But are the methods appropriate for measuring costs and benefits for decisions that will have impacts 20 to 30 years from now the right ones to employ for a future that lies 200 to 300 years in the future? This landmark book argues that methods reasonable for measuring gains and losses for a generation into the future may not be appropriate when applied to a longer span of time. Paul Portney and John Weyant have assembled some of the world's foremost economists to reconsider the purpose, ethical implications, and application of discounting in light of recent research and current policy concerns. These experts note reasons why conventional calculations involved in discounting are undermined when considering costs and benefits in the distant future, including uncertainty about the values and preferences of future generations, and uncertainties about available technologies. Rather than simply disassemble current methodologies, the contributors examine innovations that will make discounting a more

compelling tool for policy choices that influence the distant future. They discuss the combination of a high short-term with a low long-term discount rate, explore discounting according to more than one set of anticipated preferences for the future, and outline alternatives involving simultaneous consideration of valuation, discounting and political acceptability.
