Techniques for Estimating the Quantity and Quality of Storm Runoff from Urban Watersheds of Jefferson County, Kentucky Ronald D. Evaldi, Brian L. Moore, 1994

An Automated Real-time Storm Analysis and Storm Tracking Program (WEATRK) Carlton J. Bjerkaas, 1980

The evolution of the WEATRK system is described from the original software obtained under contract in 1977, to the present software configuration.

The various portions of the software are discussed with emphasis on the algorithms used to determine storm significance and establish the storm track.

Results of the two-year development effort and operational tests show the usefulness of

assimilating large amounts of complex data and generating a computer-synthesized product easily used in forecast applications. The error analysis

performed on the storm track forecast accuracy suggests that few of the errors encountered are

due to meteorological effects but they are largely due to parameters such as beam width, pulse width,

antenna rotation rate and rounding errors. The non-meteorological errors appear to average out

over large data sets; that is, the longer the storm track the smaller the forecast error.

Although the program now uses a three-dimensional analysis, very little analysis is performed on the

velocity and variance fields. The usefulness of these fields along with other improvements are

considered.

Brain Storm Optimization Algorithms Shi

Cheng, Yuhui Shi, 2019-06-03 Brain Storm

Optimization (BSO) algorithms are a new kind of

swarm intelligence method, which is based on the collective behavior of human beings, i.e., on the brainstorming process. Since the introduction of BSO algorithms in 2011, many studies on them have been conducted. They not only offer an optimization method, but could also be viewed as a framework of optimization techniques. The process employed in the algorithms could be simplified as a framework with two basic operations: the converging operation and the diverging operation. A “good enough” optimum could be obtained through recursive solution divergence and convergence. The resulting optimization algorithm would naturally have the capability of both convergence and divergence. This book is primarily intended for researchers, engineers, and graduate students with an interest in BSO algorithms and their applications. The chapters cover various aspects of BSO algorithms, and collectively provide broad insights into what these algorithms have to offer. The book is ideally suited as a graduate-level textbook, whereby students may be tasked with the study of the rich variants of BSO algorithms that involves a hands-on implementation to demonstrate the utility and applicability of BSO algorithms in solving optimization problems.

Storm Tactics Lin Pardey, Larry Pardey, 2002-08
Lin and Larry Pardey demonstrate methods to help you bring your boat and crew safely through storms. Join them near South Africa's Cape of Storms to watch a live demonstration of setting

and retrieving a para-anchor, then sail on board Taleisin during Lin & Larry's rounding of Cape Horn with storm sails in action in 70-knot winds. They demonstrate technical details of storm tactics for both modern and classic boats. Learn how to prepare your crew and boat to eliminate fear and face heavy weather with a plan. Learn how and when to use the sailor's safety valve, heaving-to, with or without a para-anchor. They also discuss gear and equipment, plus special sails for heavy weather.

Storm-surge Forecasting J. W. Nickerson, 1971 The report contains an adaptation of a unique storm-surge forecasting technique developed by Dr. C.P. Jelesnianski. This technique results in a computed storm surge profile at the inner boundary of an artificial standard basin seaward of the coast. The profile is derived from nomograms based upon a standard storm passing over a standard basin. Thumb rules and guidelines are presented in the publication for subjectively modifying the computer storm surge height as it moves shoreward of the artificial basin boundary, to fit the natural conditions of a particular coastline. Major advantages of this system are its applicability to almost any locale, its adaptability to data normally available to the field forecaster and the speed with which the forecast may be modified to remain current with natural fluctuations of the storm.

Storm World Chris Mooney, 2008-08-04 An

investigation into climate change and increasingly dangerous hurricanes from the New York Times—bestselling author of *The Republican War on Science*. A leading science journalist delves into a red-hot debate in meteorology: whether the increasing ferocity of hurricanes is connected to global warming. In the wake of Katrina, Chris Mooney follows the careers of leading scientists on either side of the argument through the 2006 hurricane season, tracing how the media, special interests, politics, and the weather itself have skewed and amplified what was already a fraught scientific debate. As Mooney puts it: “Scientists, like hurricanes, do extraordinary things at high wind speeds.” Mooney—a New Orleans native, host of the *Point of Inquiry* podcast, and author of *The Republican Brain*—has written “a well-researched, nuanced book” that closely examines whether we as a society should be held responsible for making hurricanes even bigger monsters than they already are (*The New York Times*). “Mooney serves his readers as both an empiricist who gathers data and an analyst who puts it into context. The result is an important book, whose author succeeds admirably in both his roles.” —*The Plain Dealer* “Engaging and readable . . . Mooney catches real science in the act and, in so doing, weaves a story as intriguing as it is important.” —*Los Angeles Times Book Review* “Mooney has hit upon an important and controversial topic, and attacks it with vigor.” —*The Boston Globe* “An absorbing, informed account of the politics behind a pressing contemporary controversy.” —*Kirkus Reviews*

Forecasting extratropical storm surges for the

northeast coast of the United States N. Arthur Pore, William S. Richardson, Herman P. Perrotti, 1974
The National Weather Service (NWS) has developed a technique for forecasting extratropical storm surges along the northeast coast of the United States. The storm surge is caused mainly by the strong winds associated with extra-tropical storms over nearshore areas.

Theodor Storm David Artiss, 1978-01-01 How characteristic were the elements used in Theodor Storm's (1817 – 1888) fiction? What were the rich fund of symbols and myths that he used? Few Storm interpreters have addressed themselves seriously to these questions. This study tries to fill this gap.

Predicting Storm Surges: Chaos, Computational Intelligence, Data Assimilation and Ensembles
Michael Siek, 2011-12-16 Accurate predictions of storm surge are of importance in many coastal areas in the world to avoid and mitigate its destructive impacts. For this purpose the physically-based (process) numerical models are typically utilized. However, in data-rich cases, one may use data-driven methods aiming at reconstructing the internal patterns of the modelled processes and relationships between the observed descriptive variables. This book focuses on data-driven modelling using methods of nonlinear dynamics and chaos theory. First, some fundamentals of physical oceanography, nonlinear

dynamics and chaos, computational intelligence and European operational storm surge models are covered. After that a number of improvements in building chaotic models are presented: nonlinear time series analysis, multi-step prediction, phase space dimensionality reduction, techniques dealing with incomplete time series, phase error correction, finding true neighbours, optimization of chaotic model, data assimilation and multi-model ensemble prediction. The major case study is surge prediction in the North Sea, with some tests on a Caribbean Sea case. The modelling results showed that the enhanced predictive chaotic models can serve as an efficient tool for accurate and reliable short and mid-term predictions of storm surges in order to support decision-makers for flood prediction and ship navigation.
