Detection of Severe Local Storm Phenomena by Automated Interpretation of Radar and Storm Environment David Harvey Kitzmiller, Jay P.

Breidenbach, United States. National Weather Service. Techniques Development Laboratory, 1995

Many operational features of the WSR-88D were incorporated specifically to aid forecasters in the detection of severe local storms (damaging winds, large hail, and tornadoes). One interpretive product, the Severe Weather Potential (SWP) algorithm, yields an index proportional to the probability that an individual thunderstorm cell will soon produce any severe weather phenomena. The SWP is based solely on radar information, namely vertically-integrated liquid VIL and storm horizontal extent.

Storm Tide and Wave Simulations and Assessment Shih-Chun Hsiao, Wen-Son Chiang, Wei-Bo

Chen, 2021-05-04 In this Special Issue, seven high-quality papers covering the application and development of many high-end techniques for studies on storm tides, surges, and waves have been published, for instance, the employment of an artificial neural network for predicting coastal freak waves [1]; a reproduction of super typhoon-

created extreme waves [2]; a numerical analysis of nonlinear interactions for storm waves, tides, and currents [3]; wave simulation for an island using a circulation-wave coupled model [4]; an analysis of typhoon-induced waves along typhoon tracks in the western North Pacific Ocean [5]; an understanding of how a storm surge prevents or severely restricts aeolian supply [6]; and an investigation of coastal settlements and an assessment of their vulnerability [7].

Forecasting extratropical storm surges for the northeast coast of the United States N. Arthur Pore, William S. Richardson, Herman P. Perrotti, 1974 The National Weather Service (NWS) has developed a technique for forecasting extratropical storm surges along the northeast coast of the United States. The storm surge is caused mainly by the strong winds associated with extra-tropical storms over nearshore areas.

Storm World Chris Mooney, 2008-08-04 An investigation into climate change and increasingly dangerous hurricanes from the New York Times—bestselling author of *The Republican War on Science*. A leading science journalist delves into a red-hot debate in meteorology: whether the increasing ferocity of hurricanes is connected to global warming. In the wake of Katrina, Chris Mooney follows the careers of leading scientists on either side of the argument through the 2006 hurricane season, tracing how the media, special interests, politics, and the weather itself have

skewed and amplified what was already a fraught scientific debate. As Mooney puts it: "Scientists, like hurricanes, do extraordinary things at high wind speeds." Mooney—a New Orleans native, host of the Point of Inquiry podcast, and author of The Republican Brain—has written "a well-researched, nuanced book" that closely examines whether we as a society should be held responsible for making hurricanes even bigger monsters than they already are (The New York Times). "Mooney serves his readers as both an empiricist who gathers data and an analyst who puts it into context. The result is an important book, whose author succeeds admirably in both his roles." —The Plain Dealer "Engaging and readable . . . Mooney catches real science in the act and, in so doing, weaves a story as intriguing as it is important." —Los Angeles Times Book Review "Mooney has hit upon an important and controversial topic, and attacks it with vigor." —The Boston Globe "An absorbing, informed account of the politics behind a pressing contemporary controversy." —Kirkus Reviews

An Automated Real-time Storm Analysis and Storm Tracking Program (WEATRK) Carlton J. Bjerkaas, 1980

The evolution of the WEATRK system is described from the original software obtained under contract in 1977, to the present software configuration. The various portions of the software are discussed with emphasis on the algorithms used to determine storm significance and establish the storm track. Results of the two-year development effort and operational tests show the usefulness of assimilating large amounts of complex data and generating a computer-synthesized product easily used in forecast applications. The error analysis performed on the storm track forecast accuracy suggests that few of the errors encountered are due to meteorological effects but they are largely due to parameters such as beam width, pulse width, antenna rotation rate and rounding errors. The non-meteorological errors appear to average out over large data sets; that is, the longer the storm track the smaller the forecast error. Although the program now uses a three-dimensional analysis, very little analysis is performed on the velocity and variance fields. The usefulness of these fields along with other improvements are considered.

Brain Storm Optimization Algorithms Shi Cheng, Yuhui Shi, 2019-06-03 Brain Storm

Optimization (BSO) algorithms are a new kind of swarm intelligence method, which is based on the collective behavior of human beings, i.e., on the brainstorming process. Since the introduction of BSO algorithms in 2011, many studies on them have been conducted. They not only offer an optimization method, but could also be viewed as a framework of optimization techniques. The process employed in the algorithms could be simplified as a framework with two basic operations: the converging operation and the diverging operation. A “good enough” optimum could be obtained through recursive solution divergence and convergence. The resulting optimization algorithm would naturally have the capability of both convergence and divergence. This book is primarily intended for researchers, engineers, and graduate students with an interest in BSO algorithms and their applications. The chapters cover various aspects of BSO algorithms, and collectively provide broad insights into what these algorithms have to offer. The book is ideally suited as a graduate-level textbook, whereby students may be tasked with the study of the rich variants of BSO algorithms that involves a hands-on implementation to demonstrate the utility and applicability of BSO algorithms in

solving optimization problems.
