**Shaping Femininity** Sarah Bendall,2021-10-07 Highly Commended, Society for Renaissance Studies Biennial Book Prize 2022 In sixteenth and seventeenth-century England, the female silhouette underwent a dramatic change. This very structured form, created using garments called bodies and farthingales, existed in various extremes in Western Europe and beyond, in the form of stays, corsets, hoop petticoats and crinolines, right up until the twentieth century. With a nuanced approach that incorporates a stunning array of visual and written sources and drawing on transdisciplinary methodologies, *Shaping Femininity* explores the relationship between material culture and femininity by examining the lives of a wide range of women, from queens to courtiers, farmer's wives and servants, uncovering their lost voices and experiences. It reorients discussions about female foundation garments in English and wider European history, arguing that these objects of material culture began to shape and define changing notions of the feminine bodily ideal, social status, sexuality and modesty in the early modern period, influencing enduring Western notions of femininity. Beautifully illustrated in full colour throughout, *Shaping Femininity* is the first large-scale exploration of the materiality, production, consumption and meanings of women's foundation garments in sixteenth and seventeenth-century England. It offers a fascinating insight into dress and fashion in the early modern period, and offers much of value to all those interested in the history of early modern women and gender, material culture and consumption, and the history of the body, as well as curators and reconstructors.

**High Performance Computing** Alex Veidenbaum, Kazuki Joe, Hideharu Amano, Hideo Aiso, 2003-11-18 The 5th International Symposium on High Performance Computing (ISHPC-V) was held in Odaiba, Tokyo, Japan, October 20-22, 2003. The symposium was thoughtfully planned, organized, and supported by the ISHPC Organizing Committee and its collaborating organizations. The ISHPC-V program included two keynote speeches, several invited talks, two panel discussions, and technical sessions covering theoretical and applied research topics in high-performance computing and representing both academia and industry. One of the regular sessions highlighted the research results of the ITBL project (IT-based research laboratory, <http://www.itbl.riken.go.jp/>). ITBL is a Japanese national project started in 2001 with the objective of realizing a virtual joint research environment using information technology. ITBL aims to

connect 100 supercomputers located in main Japanese scientific research laboratories via high-speed networks. A total of 58 technical contributions from 11 countries were submitted to ISHPC-V. Each paper received at least three peer reviews. After a thorough evaluation process, the program committee selected 14 regular (12-page) papers for presentation at the symposium. In addition, several other papers with favorable reviews were recommended for a poster session presentation. They are also included in the proceedings as short (8-page) papers.

The program committee gave a distinguished paper award and a best student paper award to two of the regular papers. The distinguished paper award was given for "Code and Data Transformations for Improving Shared Cache Performance on SMT Processors" by Dimitrios S. Nikolopoulos. The best student paper award was given for "Improving Memory Latency Aware Fetch Policies for SMT Processors" by Francisco J. Cazorla.

*Routledge Handbook of Ecological Economics* Clive L. Spash, 2017-04-07 Since becoming formally established with an international academic society in the late 1980s, ecological economics has advanced understanding of the interactions between social and biophysical reality. It initially combined questioning of the basis of mainstream economics with a concern for environmental degradation and limits to growth, but has now advanced well beyond critique into theoretical, analytical and policy alternatives. Social ecological economics and transformation to an alternative future now form core ideas in an interdisciplinary approach combining insights from a range of disciplines including heterodox economics, political ecology, sociology, political science, social psychology, applied philosophy, environmental ethics and a range of natural sciences. This handbook, edited by a leading figure in the field, demonstrates the dynamism of ecological economics in a wide-ranging collection of state-of-the-art essays. Containing contributions from an array of international researchers who are pushing the boundaries of the field, the Routledge Handbook of Ecological Economics showcases the diversity of the field and points the way forward. A critical analytical perspective is combined with realism about how economic systems operate and their essential connection to the natural world and society. This provides a rich understanding of how biophysical reality relates to and integrates with social reality. Chapters provide succinct overviews of the literature covering a range of subject areas including: heterodox thought on the environment; society, power and politics, markets and consumption; value and ethics; science and society; methods for evaluation and policy analysis; policy challenges; and the future post-growth society. The rich contents dispel the myth of there being no alternatives to current economic thought and the political economy it supports. The Routledge Handbook of Ecological Economics provides a guide to the literature on ecological economics in an informative and easily accessible form. It is essential reading for those interested in exploring and understanding the interactions between the social, ecological and economic and is an important resource for those interested in fields such as: human ecology, political ecology, environmental politics, human geography, environmental management, environmental evaluation, future and transition studies, environmental policy, development studies and heterodox economics.
