Storm Chaser Mike Olbinski, 2017-02-19 "Olbinski chases storms . . . capturing lightning, tornadoes and dramatic cloud formations in images that convey the awesome power and beauty of nature." —International Business Times The storms that cross the Great Plains of North America each spring are some of nature's most spectacular. They can also be some of the most dangerous. Most people who live in areas susceptible to these storms keep a close eye on the weather reports and take cover or evacuate when one is on the way. Storm chasers keep an even closer eye on the weather data, but for a different reason: they don't run away when they see a storm approaching, they follow it! Professional photographer and Emmy Award winner, Mike Olbinski has chased storms throughout his native Arizona, as well as even further afield, including Texas, Oklahoma, Kansas, and Colorado. Whether he's photographing lightning, tornadoes or even cloud formations, his remarkable images are able to convey nature in its most dramatic and impressive forms. With over 100 stunning colour photographs, this book brings together some of Mike's most breathtaking images from the past five years as he describes his love of the open road and the thrill of capturing the perfect storm on film. "These pictures are truly fascinating; they show just how small we are and how little control we have over the environment and that these storms can pack a wallop. For fans of weather and spectacular photos, this is the book for you." —San Francisco Book Review (5-star review) "A striking series of breath-taking pictures of nature lashing out from apocalyptic skies." —Daily Mail Online

Coastal Risk: Shores and Deltas in Peril Clara Armaroli,Derek W. T. Jackson,Denise Reed,Christophe Viavattene,2020-01-30 The interaction between land and sea is controlled by a number of processes that are in general driven by the equilibrium between environmental forcing components (e.g. hydrodynamic - waves, currents, surges), atmospheric (e.g. winds) and terrestrial (e.g. catchment land cover) and sediment dynamics. In the context of the Anthropocene epoch, the equilibrium in many coastal regions is now often altered by the influence of human activities. Successive human activities globally influence (indirectly) these forcing components, helping magnify the negative impact of extreme meteorological events and sea level rise. Directly, human activity can also influence a number of processes at a local scale within and between the catchment, the sea and the coast. For example, misplaced engineered infrastructure inside these naturally dynamic environments can accentuate disequilibrium, destabilizing shores and deltas. Development in catchments can promote rapid runoff, inducing sometimes-dramatic effects on downstream urbanized areas, the socio-economy as well as on coastal resources and ecosystems. This Research Topic aims to assemble research and review papers that focus on the dynamics of shores and deltas in peril under present conditions as well as in the future context of sea-level rise, climate change and adaptation strategies under various scenarios.

Time-Storm Gordon R Dickson,2011-09-29 The day the Time Storm came, Marc Despard was one of the handful to survive - or keep a remnant of sanity. Mist walls moving endlessly across the surface of the Earth, created a devastated, shifting patchwork of temporal anarchy, wrenching both inanimate and living things between the past and the future, beyond all hope of return. But Despard saw strange, dazzling patterns in his head that he knew were instruments that might enable him to beat the Time Storm. Travelling through the violent, terrifying landscape of an ever-changing world, slowly gathering others around him, he began to realise his awe-inspiring mission. He, Marc Despard, must become nothing less than master of the universe - what men call God.
