Utilizing Targeted Nutrition Tactics (TNT), the authors move beyond good carbs and bad carbs to focus instead on well-timed carbs that will allow readers to eat the foods they want as long as they are eating them at the right time. Subsistence-Settlement Systems and Intersite Variability in the Moroiso Phase of the Early Jomon Period of Japan Junko Habu,2001-01-01 This book examines the settlement patterns and intersite variability in lithic assemblages of Early Jomon (ca. 5000 BP) hunter-gatherers in Japan. A model is proposed that links regional

settlement patterns and intersite lithic assemblage variability to residential mobility. The results of this study suggest that the Early Jomon people were not sedentary, as previously assumed, but instead moved their residential basis seasonally. The implications of this result are discussed in the context of the development of hunter-gatherer cultural complexity in general and the course of Japanese prehistory in particular.
