This book will also help you select the appropriate model as well as the appropriate algorithm for your problem. What You Will Learn Get to know the basics of Probability theory and Graph Theory Work with Markov Networks Implement Bayesian Networks Exact Inference Techniques in Graphical Models such as the Variable Elimination Algorithm Understand approximate Inference Techniques in Graphical Models such as Message Passing Algorithms Sample algorithms in Graphical Models Grasp details of Naive Bayes with real-world examples Deploy PGMs using various libraries in Python Gain working details of Hidden Markov Models with real-world examples In Detail Probabilistic Graphical Models is a technique in machine learning that uses the concepts of graph theory to compactly represent and optimally predict values in our data problems. In real world problems, it's often difficult to select the appropriate graphical model as well as the appropriate inference algorithm, which can make a huge difference in computation time and accuracy. Thus, it is crucial to know the working details of these algorithms. This book starts with the basics of probability theory and graph theory, then goes on to discuss various models and inference algorithms. All the different types of models are discussed along with code examples to create and modify

them, and also to run different inference algorithms on them. There is a complete chapter devoted to the most widely used networks Naive Bayes Model and Hidden Markov Models (HMMs). These models have been thoroughly discussed using real-world examples. Style and approach An easy-to-follow guide to help you understand Probabilistic Graphical Models using simple examples and numerous code examples, with an emphasis on more widely used models.

Art & Energy Donatella Bernardi,2021-08-03 The conviction that an arts school can be a pedagogical nexus dedicated to the transmission of knowledge, experimentation, and research. If you immerse yourself at Lake Zurich, a hedge-fund office, a botanical garden, or a land-art piece built on ruins, is it possible to discern an energy particular to art? Art as a form of energy capable of encompassing the whole of life, more powerful than finance and its algorithms? Art as science or speculative fiction? We dwell in castles with Schrödinger's cat until we give form to the formless: molecules and failed soldiers, art spaces previously owned by the mafia. We share tips about the tricks of the trade--only to intervene, emancipate,

culminate, collapse, and (re)emerge. Let us look everywhere for ideas, and let us be gloriously out of touch: may we grow our capacity and courage to love. Catastrophism, miniskirt, particle. This book arises from the activities of the MA Fine Arts program at the Zurich University of the Arts in 2019. It reflects the conviction that an arts school can be a pedagogical nexus dedicated to the transmission of knowledge, experimentation, and research as much as a locus for civic and critical debate and exhibition, involved in its community, locally and globally.
