Digital Personalized Health and Medicine L.B. Pape-Haugaard, C. Lovis, I. Cort Madsen, 2020-06-17 Digital health and medical informatics have grown in importance in recent years, and have now become central to the provision of effective healthcare around the world. This book presents the proceedings of the 30th Medical Informatics Europe conference (MIE). This edition of the conference, hosted by the European Federation for Medical Informatics (EFMI) since the 1970s, was due to be held in Geneva, Switzerland in April 2020, but as a result of measures to prevent the spread of the Covid19 pandemic, the conference itself had to be cancelled. Nevertheless, because this collection of papers offers a wealth of knowledge and experience across the full spectrum of digital health and medicine, it was decided to publish the submissions accepted in the review process and confirmed by the Scientific Program Committee for publication, and these are published here as planned. The 232 papers are themed under 6 section headings: biomedical data, tools and methods; supporting care delivery; health and prevention; precision medicine and public health; human factors and citizen centered digital health; and ethics, legal and societal aspects. A 7th section deals with the Swiss personalized health network, and section 8 includes the 125 posters accepted for the conference. Offering an overview of current trends and developments in digital health and medical informatics, the book provides a valuable information resource for researchers and health practitioners alike.

This series of conferences originated from collaborations between researchers from China and Germany and has evolved into an international conference for reporting advances in parallel processing technologies. APPT 2009 addressed the entire gamut of related topics, ranging from the architectural aspects of parallel computer hardware and system software to the applied technologies for novel applications. For this conference, we received over 76 full submissions from researchers all over the world. All the papers were peer reviewed in depth and qualitatively graded on their relevance, originality, significance, presentation, and the overall appropriateness for their acceptance. Any concerns raised were discussed by the Program Committee. The Organizing Committee did an excellent job in selecting 36 papers for presention. In short, the papers included here represent the forefront of research from China, Switzerland, Germany, and other countries.

It is also an excellent resource for researchers in industry and academia and graduate students taking courses in separations and membranes and related fields.

Transparent Electronics Antonio Facchetti, Tobin Marks, 2010-03-25 The challenge for producing "invisible" electronic circuitry and opto-electronic devices is that the transistor materials must be transparent to visible light yet have good carrier mobilities. This requires a special class of materials having "contra-indicated properties" because from the band structure point of view, the combination of transparency and conductivity is contradictory. Structured to strike a balance between introductory and advanced topics, this monograph juxtaposes fundamental science and technology / application issues, and essential materials characteristics versus device architecture and practical applications. The first section is devoted to fundamental materials compositions and their properties, including transparent conducting oxides, transparent oxide semiconductors, p-type wide-band-gap semiconductors, and single-wall carbon nanotubes. The second section deals with transparent electronic devices including thin-film transistors, photovoltaic cells, integrated electronic circuits, displays, sensors, solar cells, and electro-optic devices. Describing scientific fundamentals and recent breakthroughs such as the first "invisible" transistor, Transparent Electronics: From Synthesis to Applications brings together world renowned experts from both academia, national laboratories, and industry.

Ecological Systems Rik Leemans,2012-12-12 Earth is home to an estimated 8 million animal species, 600,000 fungi, 300,000 plants, and an undetermined number of microbial species. Of these animal, fungal, and plant species, an estimated 75% have yet to be identified. Moreover, the interactions between these species and their physical environment are known to an even lesser degree. At the same time, the earth's biota faces the prospect of climate change, which may manifest slowly or extremely rapidly, as well as a human population set to grow by two billion by 2045 from the current seven billion. Given these major ecological changes, we cannot wait for a complete biota data set before assessing, planning, and acting to preserve the ecological balance of the earth. This book provides comprehensive coverage of the scientific and engineering basis of the systems ecology of the earth in 15 detailed, peer-reviewed entries written for a broad audience of undergraduate and graduate students as well as practicing professionals in government, academia, and industry. The methodology presented aims at identifying key interactions and environmental effects, and enabling a systems-level understanding even with our present state of factual knowledge.

Landscape Boundaries Andrew J. Hansen, Francesco DiCastri, 2012-12-06 The emergence of landscape ecology during the 1980s represents an import ant maturation of ecological theory. Once enamored with the conceptual beauty of well-balanced, homogeneous ecosystems, ecologists now assert that much of the essence of ecological systems lies in their lumpiness. Patches with differing properties and behaviors lie strewn across the land scape, products of the complex interactions of climate, disturbance, and biotic processes. It is the collective behavior of this patchwork of eco systems that drives pattern and process of the landscape. is not an end point This realization of the importance of patch dynamics in itself, however. Rather, it is a passage to a new conceptual framework, the internal workings of which remain obscure. The next tier of questions includes: What are the fundamental pieces that compose a landscape? How are these pieces bounded? To what extent do these boundaries influence communication and interaction among patches of the landscape? Will con sideration of the interactions among landscape elements help us to under stand the workings of landscapes? At the core of these questions lies the notion of the ecotone, a term with a lineage that even predates ecosystem. Late in the nineteenth century, F. E. Clements realized that the transition zones between plant communities distinct from either of the adjacent communities. Not until the emergence of patch

dynamics theory, however, has central significance of the ecotone concept become apparent.

Gallstone Disease Werner Swobodnik,Roger D. Soloway,Hans Ditschuneit,2012-12-06 The nonsurgical management of gallstone disease has drawn widespread clinical interest during the last decade as ultrasound surveys have indicated that cholelithiasis is predom inantly an asymptomatic condition and much more prevalent than previously thought. This book presents an overview of the pathophysiologic and pathobiochemical principles of gallstone formation and the consequences for clinical therapeutic regimens. New information concerning the balance between vesicular and micellar transport of choles terol, early cholesterol nucleation, and the influence of inhibiting and promoting com pounds for cholesterol nucleation as well as information concerning the effects of changes in gallbladder motility and gallbladder mucosal function is reviewed. In order to make further progress in developing treatments which facilitate gallstone dissolution and in preventing disease, it is necessary to integrate this new data into our thinking. Methods of treatment such as systemic litholysis of cholesterol gallbladder stones with bile acid preparations and mechanical fragmentation of stones either by extracorpo ral shock waves or intracorporal laser systems are carefully described and separate discussions of direct contact litholysis of cholesterol stones with ether preparations and the local litholytic treatment of calcified pigment stones are included. New therapeutic applications of HMG-CoA-reductase inhibitors and nonsteroidal anti-inflammatory drugs are also critically reviewed. Finally, for the interested reader an evaluation of prophylactic treatment against stone recurrence after successful conservative treatment and an appraisal of alternative management strategies supplement the information on the conservative treatment of gallstones.

Information Technology Based Methods for Health Behaviours A.J. Maeder,S. Champion,C. Moores,2020-03-12 Understanding and modifying health behaviors plays an important part in healthcare. The need to change behaviors applies across a range of health contexts, from individual interventions to the clinically-delivered management of chronic diseases and rehabilitation. Telehealth or virtual care technology offers many possible advantages here, including cost-efficiency, scalability, personalization, and automated high volume data collection and analysis, but success will depend on the effectiveness of the design, implementation and deployment of IT-based methods. This book, which forms part of the Global Telehealth series, includes papers presented at Global Telehealth 2019 (GT2019), a National Symposium on the topic of IT-based Methods for Health Behaviours held in Adelaide, Australia on 5 July 2019. The 10 papers selected for inclusion here comprise only full-paper, blind peer-reviewed contributions received for the symposium and the subsequent call for further contributions. Topics range from the scientific theory of health behavior change, through technological approaches to active ageing and the implementation of the 10,000 steps project, to a discussion of digital infrastructure for the storing & sharing of internet of things, wearables and app-based research study data. The book will be of interest to all researchers, managers and healthcare practitioners working to bring about positive changes in health behavior.
