JAK-STAT Signalling Sandra E. Nicholson, Nicos A. Nicola, 2013-01-08 The receptor-associated JAK protein kinases and their substrates, the STAT transcriptional activators, transmit signals following cytokine and growth factor binding to receptors expressed on the cell surface, to result in specific transcriptional and cellular responses. Over the last two decades, the field has progressed from identification of the individual components through to an understanding of the activation and deactivation mechanisms, and the complex structural detail of the proteins involved. We now know that these pathways are important in many biological processes, including growth and development, hematopoiesis, and the innate and adaptive immune response. *JAK-STAT Signalling: Methods and Protocols* provides detailed methodologies for examining many aspects of the pathway. Divided into four sections, topics include JAK and STAT specific approaches, the negative regulators of the pathway (SOCS proteins), and the production and crystallization of JAK and STAT proteins, among others. Written in the successful *Methods in Molecular Biology*TM series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, *JAK-STAT Signalling: Methods and Protocols* will be of use not only to those working in the area but also to new investigators who are led to delve into the complexities of JAK and STAT responses.

Embodiment and Eating Disorders Hillary L. McBride, Janelle L. Kwee, 2018-07-18 This is an insightful and essential new volume for academics and professionals interested in the lived experience of those who struggle with disordered eating. *Embodiment and Eating Disorders* situates the complicated – and increasingly prevalent – topic of disordered eating at the crossroads of many academic disciplines, articulating a notion of embodied selfhood that rejects the separation of mind and body and calls for a feminist, existential, and sociopolitically aware approach to eating disorder treatment. Experts from a variety of backgrounds and specializations examine theories of embodiment, current empirical research, and practical examples and strategies for prevention and treatment.

Economic Nationalism in a Globalizing World Eric Helleiner, Andreas Pickel, 2018-08-06 Is economic nationalism an outdated phenomenon in light of globalization? *Economic Nationalism in a Globalizing World* demonstrates the enduring, and even heightened, economic significance of national identities and nationalism in the current age. The volume's contributors, pioneers in the reinterpretation of economic nationalism, explore diverse ways in which national identities and nationalism continue to shape contemporary economic policies and processes. The authors examine the question in a range of geographical contexts and issues: European Union food politics, competitiveness strategies in New Zealand, East Asian development strategies, Japanese liberalization, monetary politics in Quebec and Germany, and post-Soviet economic reforms. Together, the cases explore the policy breadth of nationalism. It is not just a protectionist ideology but is in fact associated with a wide variety of economic policies, including support for economic liberalization and globalization.

Feminist Epistemology and Philosophy of Science Heidi E. Grasswick, 2011-05-16 Having enjoyed more than twenty years of development, feminist epistemology and philosophy of science are now thriving fields of inquiry, offering current scholars a rich tradition from which to draw. In addition to a recognition of the power of knowledge itself and its effects on women's lives, a central feature of feminist epistemology and philosophy of science has been the attention they draw to the role of power dynamics within knowledge-seeking practices and the implications of these dynamics for our understandings of knowledge, science, and epistemology. *Feminist Epistemology and Philosophy of Science: Power in Knowledge* collects new works that address today's key challenges for a power-sensitive feminist approach to questions of knowledge and scientific practice. The essays build upon established work in feminist epistemology and philosophy of science, offering new developments in the fields, and representing the broad array of the feminist work now being done and the many ways in which feminists incorporate power dynamics into their analyses.

Nuclear Trafficking Carl Feldherr, 2012-12-02 Nuclear Trafficking is a summary of the state of knowledge in nuclear trafficking, and is organized into five parts. The book begins by discussing the diffusion and signal-mediated transport through the pores. It then looks into the detailed accounts of pore structure and composition, nuclear localization signals, signal binding proteins, RNA efflux, and biochemical factors influencing nucleocytoplasmic exchange. This book will be very useful to those people new to this field of interest.

The Politics of African Industrial Policy Lindsay Whitfield, Ole Therkildsen, Lars Buur, Anne Mette Kjær, 2015-07-02 This book engages in the debate on growth versus economic transformation and the importance of industrial policy, presenting a comprehensive framework for explaining the politics of industrial policy. Using comparative research to theorize about the politics of industrial policy in countries in the early stages of capitalist transformation that also experience the pressures of elections due to democratization, this book provides four in-depth African country studies that illustrate the challenges to economic transformation and the politics of implementing industrial policies.

National Purpose in the World Economy Rawi Abdelal, 2018-08-06 How do national identities affect the world economy? Building on the insight that nationalisms and national identities endow economic policy with social purpose, Rawi Abdelal proposes a novel theoretical framework, a distinctively Nationalist perspective on international political economy, to answer this question. Using this framework, and drawing on field research in Lithuania, Ukraine, and Belarus, he provides an in-depth look at the link between national identity and the economic policies of the new states formed by the breakup of the Soviet Union. All these states, from the Baltic coast to central Asia, were economically dependent on Russia during the 1990s. However, they reacted very differently to that dependence, and their reactions can be traced, Abdelal contends, to their individual societies. Some, such as Belarus, found dependence inevitable and sought economic reintegration with Russia. Others, like Lithuania, interpreted dependence as a large-scale security threat and reoriented their economies away from Russia. A third group, typified by Ukraine, demonstrated no coherent economic policy at all regarding dependence. Abdelal distinguishes the Nationalist

tradition in international political economy from the Realist tradition, and shows that economic nationalism is different than mercantilism. He demonstrates the ways that national identity affects economic policy and explains why some governments seek economic autonomy while others prefer regional reintegration. He then applies his approach to other cases of economic reorganization after the end of empire—eastern Europe in the 1920s after the Habsburgs, 1950s Indonesia, and French West Africa in the 1960s.

The Body in Medical Thought and Practice D. Leder, 2013-06-29 In the second half of the 20th century, the body has become a central theme of intellectual debate. How should we perceive the human body? Is it best understood biologically, experientially, culturally? How do social institutions exercise power over the body and determine norms of health and behavior? The answers arrived at by phenomenologists, social theorists, and feminists have radically challenged our conventional notions of the body dating back to 17th century Cartesian thought. This is the first volume to systematically explore the range of contemporary thought concerning the body and draw out its crucial implications for medicine. Its authors suggest that many of the problems often found in modern medicine -- dehumanized treatment, overspecialization, neglect of the mind's healing resources -- are directly traceable to medicine's outmoded concepts of the body. New and exciting alternatives are proposed by some of the foremost physicians and philosophers working in the medical humanities today.

Physiology of Love and Other Writings Paolo Mantegazza, 2008-02-16 Physician, anthropologist, travel writer, novelist, politician, Paolo Mantegazza (1831-1910) was probably the most eclectic figure in late-nineteenth century Italian culture. A prolific writer, Mantegazza can be seen as a forerunner of what has come to be known as cultural studies on account of his interdisciplinary approach, his passionate blend of scientific and literary elements in his writings, and his ability to transcend the boundaries between 'high' and 'low' culture. Though extremely popular during his lifetime both in Italy and abroad, Mantegazza's works have not been made available in a significant English language compilation. This volume is a representative overview of Mantegazza's key works, many of them translated into English for the first time. In addition to the unabridged *Physiology of Love* (1873), a veritable best-seller at the time of its initial publication, this compilation features selections from Mantegazza's writings on medicine, his travelogues, his epistolary novel *One Day in Madeira* (1868), and his treatise on materialistic aesthetics. Replete with an extensive and informative introduction by the editor, *The Physiology of Love and Other Writings* also excerpts Mantegazza's works of science fiction, memoir, and social and cultural criticism. As an anthology of the works of Paolo Mantegazza, a writer of diverse topical orientations, this volume is also an account of the circulation of ideas and cross-fertilization of disciplines that defined a crucial period of Italian and European cultural life.

Banking on Markets Rachel A. Epstein, 2017 States and banks have traditionally maintained close ties. At various points in time, states have used banks to manage their economies and soak up government debt, while banks enjoyed regulatory forbearance, restricted competition, and implicit or explicit guarantees from their home markets. The political foundations of banks have thus been powerful and enduring, with actors on both sides of the aisle reluctant to sever relations. The central argument of this book, however, is that in the world's largest integrated market, Europe, the traditional political ties between states and banks have been transformed. Specifically, through a combination of post-communist transition, monetary union, and economic crisis, states in Europe no longer wield preponderant influence over their banks. *Banking on Markets* explains why we have witnessed the radical denationalization of this politically vital

sector, as well as the consequences for economic volatility and policy autonomy. The findings in Europe have implications for other world regions, which, to varying degrees, have also experienced intensified pressure on their traditional models of domestic political control over finance. Through an investigation of foreign bank behavior in economic crises, the developmental consequences of political control over banks and the emergence of European Banking Union in the Eurozone, the book advances three main findings. First is that foreign bank ownership need not necessarily lead to economic vulnerability of host states. Second is that marketized bank-state ties do, however, limit pathways to catching up in the global economy. And third is that European Banking Union has strengthened the euro's credibility while cutting down substantially on Eurozone member states' economic policy discretion. This book details the intense political struggles that have underpinned all three outcomes.

Drawn after Nature Jan Koning, Gerda van Uffelen, Alicja Zemanek, Bogdan Zemanek, 2017-03-27 *Drawn after nature* presents a vivid and complete picture of a unique historical collection of botanical watercolours. Botanists, art lovers, historians as well as the general public will enjoy this publication of the watercolours, their annotations and their history, but above all their supreme beauty and display of craftsmanship. For over 300 years, the Preußische Staatsbibliothek in Berlin held a most remarkable collection of botanical watercolours. They were catalogued as part of the library's illustrated manuscripts, or *Libri Picturati*. These magnificent works of art, rich in colour and detail, were made in the second half of the 16th century in the southern part of the Low Countries. In the 1970s the complete set of watercolours had been rediscovered and sparked the interest of historians, art historians and botanists alike. Together they set out to unravel the many secrets still held by the *Libri Picturati*'s watercolours: who had collected them, and why? A team of pre-eminent European scientists worked together on these and other intriguing questions surrounding the collection. They unveiled the important role played by the famous Dutch botanist Carolus Clusius, who later founded the University of Leiden's Botanical Gardens. *Drawn after nature* contains accessible and informative chapters on the collection's history, but most importantly: it brings together all of the original 1429 watercolours and sketches, for the first time in one volume, accompanied by their original annotations.

Capitalist Diversity on Europe's Periphery Dorothee Bohle, Bela Greskovits, 2012-08-15 With the collapse of the Council for Mutual Economic Assistance in 1991, the Eastern European nations of the former socialist bloc had to figure out their newly capitalist future. Capitalism, they found, was not a single set of political-economic relations. Rather, they each had to decide what sort of capitalist nation to become. In *Capitalist Diversity on Europe's Periphery*, Dorothee Bohle and Béla Greskovits trace the form that capitalism took in each country, the assets and liabilities left behind by socialism, the transformational strategies embraced by political and technocratic elites, and the influence of transnational actors and institutions. They also evaluate the impact of three regional shocks: the recession of the early 1990s, the rolling global financial crisis that started in July 1997, and the political shocks that attended EU enlargement in 2004. Bohle and Greskovits show that the postsocialist states have established three basic variants of capitalist political economy: neoliberal, embedded neoliberal, and neocorporatist. The Baltic states followed a neoliberal prescription: low controls on capital, open markets, reduced provisions for social welfare. The larger states of central and eastern Europe (Poland, Hungary, and the Czech and Slovak republics) have used foreign investment to stimulate export industries but retained social welfare regimes and substantial government power to enforce industrial policy. Slovenia has proved to be an outlier, successfully mixing competitive industries and neocorporatist social inclusion. Bohle and Greskovits also describe the political contention over such arrangements in Romania, Bulgaria, and

Croatia. A highly original and theoretically sophisticated typology of capitalism in postsocialist Europe, this book is unique in the breadth and depth of its conceptually coherent and empirically rich comparative analysis.

Resilient Liberalism in Europe's Political Economy Vivien A. Schmidt, Mark Thatcher, 2013-08-29 Why have neo-liberal economic ideas been so resilient since the 1980s, despite major intellectual challenges, crippling financial and political crises, and failure to deliver on their promises? Why do they repeatedly return, not only to survive but to thrive? This groundbreaking book proposes five lines of analysis to explain the dynamics of both continuity and change in neo-liberal ideas: the flexibility of neo-liberalism's core principles; the gaps between neo-liberal rhetoric and reality; the strength of neo-liberal discourse in debates; the power of interests in the strategic use of ideas; and the force of institutions in the embedding of neo-liberal ideas. The book's highly distinguished group of authors shows how these possible explanations apply across the most important domains - fiscal policy, the role of the state, welfare and labour markets, regulation of competition and financial markets, management of the Euro, and corporate governance - in the European Union and across European countries.

Twenty-Five Sides of a Post-Communist Mafia State Balint Magyar, Julia Vasarhelyi, 2017-02-28 The twenty-five essays accompany, illustrate and underpin the conceptual framework elaborated in *Post-Communist Mafia State*, published in conjunction with this volume. Leading specialists analyze the manifestations of the current political regime in Hungary from twenty-five angles. Topics discussed include the ideology, constitutional issues, social policy, the judiciary, foreign relations, nationalism, media, memory politics, corruption, civil society, education, culture and so on. Beyond the basic features of the economy the domains of taxation, banking system, energy policies and the agriculture are treated in dedicated studies. The essays are based on detailed empirical investigation about conditions in today's Hungary. They nevertheless contribute to the exploration of the characteristic features of post-communist authoritarian regimes, shared by an increasing number of countries in Europe and Central Asia. Joint publication with Noran Libro, Budapest

Numerical Methods for Unconstrained Optimization and Nonlinear Equations J. E. Dennis, Jr., Robert B. Schnabel, 1996-12-01 This book has become the standard for a complete, state-of-the-art description of the methods for unconstrained optimization and systems of nonlinear equations. Originally published in 1983, it provides information needed to understand both the theory and the practice of these methods and provides pseudocode for the problems. The algorithms covered are all based on Newton's method or quasi-Newton methods, and the heart of the book is the material on computational methods for multidimensional unconstrained optimization and nonlinear equation problems. The republication of this book by SIAM is driven by a continuing demand for specific and sound advice on how to solve real problems. The level of presentation is consistent throughout, with a good mix of examples and theory, making it a valuable text at both the graduate and undergraduate level. It has been praised as excellent for courses with approximately the same name as the book title and would also be useful as a supplemental text for a nonlinear programming or a numerical analysis course. Many exercises are provided to illustrate and develop the ideas in the text. A large appendix provides a mechanism for class projects and a reference for readers who want the details of the algorithms. Practitioners may use this book for self-study and reference. For complete understanding, readers should have a background in calculus and linear algebra. The book does contain background material in multivariable calculus and numerical linear algebra.
