**Choosing the Better Part** M.P. de Baar, Machteld Löwensteyn, Marit Monteiro, A. Agnes Sneller, 2012-12-06 Anna Maria van Schurman was in more than one aspect an unconventional woman in her own lifetime. As a gifted scholar in many foreign and ancient languages, as well as in philosophy and theology, she corresponded with other learned men and women all over Europe. She achieved international renown for her own defence of scholarly activity of women. Life and work of this Dutch femme savante of the 17th Century has thus far been studied by theologians, philosophers, literary scholars, historians, pedagogues and art historians, each concentrating on specific aspects of Van Schurman's biography or work. A rather fragmented image of this scholar was the result. This interdependent collection of essays describes the life and work of Anna Maria van Schurman from an interdisciplinary - or rather multidisciplinary - approach and will outline a more integrated yet at the same time subtly differentiated picture. Nine contributions - from the disciplines of philosophy, theology, Dutch language and literature, intellectual and art history, and women's studies - partly based on new source material, shed light on Van Schurman's ideas on erudition and femininity, ethics and philosophy, as well as on her religious beliefs, within the context of the early modern intellectual community to which she belonged. Audience: This collection of essays will therefore command the interest not only of historians, but also of scholars and students in theology, philosophy, art history, and women's studies.

**A History of Folding in Mathematics** Michael Friedman, 2018-05-25 While it is well known that the Delian problems are impossible to solve with a straightedge and compass – for example, it is impossible to construct a segment whose length is cube root of 2 with these instruments – the discovery of the Italian mathematician Margherita Beloch Piazzolla in 1934 that one can in fact construct a segment of length cube root of 2 with a single paper fold was completely ignored (till the end of the 1980s). This comes as no surprise, since with few exceptions paper folding was seldom considered as a mathematical practice, let alone as a mathematical procedure of inference or proof that could prompt novel mathematical discoveries. A few questions immediately arise: Why did paper folding become a non-instrument? What caused the marginalisation of this technique? And how was the mathematical knowledge, which was nevertheless transmitted and prompted by paper folding, later treated and conceptualised? Aiming to answer these questions, this volume provides, for the first time, an extensive historical study on the history of folding in mathematics, spanning from the 16th century to the 20th century, and offers a general study on the ways mathematical knowledge is marginalised, disappears, is ignored or becomes obsolete. In doing so, it makes a valuable contribution to the field of history and philosophy of science, particularly the history and philosophy of mathematics and is highly recommended for anyone interested in these topics.

*Four Histories about Early Dutch Football, 1910-1920* Nicholas Piercey, 2016-10-06 What is the purpose of history today, and how can sporting research help us understand the world around us? In this stimulating book, Nicholas Piercey constructs four new histories of early Dutch football, exploring urban change, club members, the media, and the diaries of Cornelis Johannes Karel van Aalst, a stadium director, to propose practical examples of how history can become an

important democratic tool for the 21st century. Using early Dutch football as a field for experimental thinking about the past, the four histories offer new insights into the lives, interests and passions of those connected to the sport in the 1910s and the cities they lived in. How did the First World War impact on Dutch football? Were new stadia a form of social control? Is the spread of the beautiful game really a good thing? And why was one of the sport's most prominent figures more concerned with potatoes? These stories of early Dutch football suggest how vital sport and history can be in shaping our lives, perceptions and actions, and why we need to challenge the influence they have today.

**The Universal Art of Samuel Van Hoogstraten (1627-1678)** Thijs Weststeijn, 2013 The versatile painter, poet, courtier and European traveller Samuel van Hoogstraten (1627-1678), one of Rembrandt's pupils, has received much scholarly attention in the last two decades. Whereas older historians allotted him a marginal role as a minor figure in his master's studio, he is now recognized for his central position in the world of art and letters in the Dutch Golden Age. This new evaluation is mainly due to careful studies of his treatise on painting, 'Inleyding tot de Hooge Schoole der Schilderkonst' (Introduction to the Academy of Painting, 1678). His book has been mined for unique insights not only into Rembrandt's working methods but also into profounder problems relative to Dutch art and culture, such as pictorial realism, imitation and illusion, the rise of landscape and still life and the status of the 'learned artist'.
