Review of Some Online Banks and Visa/Master Cards Issuers Dr. Hedaya Mahmood

Alasooly, 2020-09-22 A digital wallet also known as e-Wallet refers to an electronic device, online service, or software program that allows one party to make electronic transactions with another party bartering digital currency units for goods and services. This can include purchasing items online with a computer or using a smartphone to purchase something at a store. Money can be deposited in the digital wallet prior to any transactions or, in other cases; an individual's bank account can be linked to the digital wallet. Users might also have their driver's license, health card, loyalty card(s) and other ID documents stored within the wallet. The credentials can be passed to a merchant's terminal wirelessly via near field communication (NFC). Increasingly, digital wallets are being made not

just for basic financial transactions but to also authenticate the holder's credentials. For example, a digital wallet could verify the age of the buyer to the store while purchasing alcohol. The system has already gained popularity in Japan, where digital wallets are known as wallet mobiles". A crypto currency wallet is a digital wallet where private keys are stored for crypto currencies like bitcoin. Online banking, also known as internet banking or web banking, is an electronic payment system that enables customers of a bank or other financial institution to conduct a range of financial transactions through the financial institution's website. The online banking system will typically connect to or be part of the core banking system operated by a bank and is in contrast to branch banking which was the traditional way customers accessed banking services. Some banks operate as a direct bank (or "virtual bank"), where they rely completely on internet banking. Internet banking software provides personal and corporate banking services offering features such as viewing account balances, obtaining statements, checking recent transactions, transferring money between accounts, and making payments. A crypto currency exchange, or a digital currency exchange (DCE), is a business that allows customers to trade crypto currencies or digital currencies for other assets, such as conventional fiat money or other digital currencies. A crypto currency exchange can be a market maker that typically takes the bid-ask spreads as a transaction commission for its service or, as a matching platform, simply charges fees. A

debit card is a payment card that deducts money directly from a consumer's checking account to pay for a purchase. Debit cards eliminate the need to carry cash or physical checks to make purchases directly from your savings. It is similar to a credit card, but unlike a credit card, the money is immediately transferred directly from the cardholder's bank account when performing any transaction. A credit card is a payment card issued to users (cardholders) to enable the cardholder to pay a merchant for goods and services based on the cardholder's promise to the card issuer to pay them for the amounts plus the other agreed charges.[1] The card issuer (usually a bank) creates a revolving account and grants a line of credit to the cardholder, from which the cardholder can borrow money for payment to a merchant or as a cash advance. As Electronic banks and E-wallets and Crypto currency Exchanges are important in internet shopping and Ecommerce and crypto currency trading. We have nowadays many online payment providers and so it becomes very difficult for the users to compare in between them to choose the best in term of deposit and withdraw fees. I will not go in detail on each payment provider services, rules and fees. I will just list roughly most commonly used online payment providers for sort of comparison in between them. I will specifically compare the withdraw and deposit fees for each one. I will mention also some of the difficulties I met with some of them because lack of their services in my country Palestine. guest. The value of a Bitcoin in dollar terms has
tripled in the past month as the price has gone
parabolic. Who’s to say it can’t triple again in
the next month?” For those of you who keep track
of the value of Bitcoin, you no doubt see all the
fluctuations that are connected to this digital
currency. Some people wonder if this means that
there is a threat to the entire crypto-currency
platform or not? In the recent past the popularity
of Bitcoin has gained new attention. The number of
online and offline retailers accepting Bitcoin has
grown substantially. One huge attraction of
Bitcoin is that it has very low transactions fees
associated with it. This is because no bank or
government has control over this digital currency.
Because Bitcoin is basically a code, could a group
of users get together and try to gain control?
This is thought to be highly unlikely due to the
verification process of each transaction. As the
history of Bitcoin only dates back to 2009 it is
still very early in the evolution of this
currency. It is difficult to predict the future

and what will happen. As Bitcoin stands today it has no country boundaries and this is one aspect that people love. All transactions are done via keys with no names or identities attached to them. Investors are becoming passionate about Bitcoin due to the lack of government involvement. They love that the banks can't dictate the value of this currency or assign transaction or exchange fees to it. For a monopolizing threat to be real to Bitcoin, it would need to involve massive amounts of computer power and technology. If any one person or group would be willing to go this far, only time will tell. If you are considering entering the Bitcoin bubble, most experts suggest the 'now rather than later' approach. Any type of digital currency or stock market trading can be volatile. You just need to be aware of the risks and you must be willing to accept them. Feeling Confused? Not to worry you are not alone. One of the biggest issues with any digital currency is not knowing how to get started. Some of the most common questions asked about Bitcoin include: What is cryptocurrency? What is Blockchain Technology? What is Bitcoin and how does it work? What are the other popular digital currencies? What are the coins market caps? How can you start your own cryptocurrency exchanges? Where can you make cryptocurrency exchanges? How do I buy and trade Bitcoins and the best places to do so?
