Environmental Change, Adaptation and Migration
Felicitas Hillmann, Marie Pahl, Birte Rafflenbeul, Harald Sterly, 2015-09-22 The contributors present empirical and theoretical insights on current debates on environmental change, adaptation and migration. While focusing on countries subject to environmental degradation, it calls for a regional perspective that recognises local actors and a systematic link between development studies and migration

research.

Law, Normative Pluralism, and Post-Disaster Recovery Vivencio O. Ballano, 2017-09-14 This book looks at how the multiplicity of formal and informal normative systems that actualize the post-disaster recovery goals of the country's Disaster Risk Reduction and Management Act of 2010 has resulted in the inadequate housing and relocation of Typhoon Ketsana victims in the Philippines. Using the sociological and normative pluralist perspectives and the case study method, it evaluates the level of conformity of the components of the housing project according to international conventions and legal standards. It highlights the negative unintended consequences caused by the complex normative regimes of various competing stakeholders, rigid real estate regulation, and the unscrupulous involvement of powerful and 'corrupt' real estate developers and housing groups as largely contributing to the project's deviation from the law's proactive objectives. This book attempts to promote the socio-legal perspectives which have long been overlooked in disaster research. Finally, it invites policymakers to enact a comprehensive disaster law and create a one-stop disaster management agency to improve the long-term rehabilitation of disaster victims in developing countries such as the Philippines.

Effects of the Late October 1991 North Atlantic Extra-tropical Storm on Water Levels, 1992

Climate Change and Natural Disasters Vinod Thomas, 2017-01-31 The start of the new millennium will be remembered for deadly climate-related disasters—the great floods in Thailand in 2011, Super Storm Sandy in the United States in 2012, and Typhoon Haiyan in the Philippines in 2013, to name a few. In 2014, 17.5 million people were displaced by climate-related disasters, ten times more than the 1.7 million displaced by geophysical

hazards. What is causing the increase in natural disasters and what effect does it have on the economy? Climate Change and Natural Disasters sends three messages: human-made factors exert a growing influence on climate-related disasters; because of the link to anthropogenic factors, there is a pressing need for climate mitigation; and prevention, including climate adaptation, ought not to be viewed as a cost to economic growth but as an investment. Ultimately, attention to climate-related disasters, arguably the most tangible manifestation of global warming, may help mobilize broader climate action. It can also be instrumental in transitioning to a path of low-carbon, green growth, improving disaster resilience, improving natural resource use, and caring for the urban environment. Vinod Thomas proposes that economic growth will become sustainable only if governments, political actors, and local communities combine natural disaster prevention and controlling climate change into national growth strategies. When considering all types of capital, particularly human capital, climate action can drive economic growth, rather than hinder it.

The Asia-Pacific Century Adam B.

Lowther, 2013-08-28 When Secretary of State Hillary Clinton published America's Pacific Century in Foreign Policy magazine in November 2011, the administration was clearly indicating to domestic and international audiences that the United States is beginning a pivot toward the Asia-Pacific. Clinton's article served as a spark for renewed interest in the nation's Asia-Pacific strategy and American interests in the region. The Asia-Pacific Century: Challenges and Opportunities looks to the future of the Asia-Pacific and examines a broad range of questions that focus on diplomatic, economic, and military challenges facing the region's key players, with a particular focus on

their relevance to the US military.

Going to Extremes ,

Climate Change in the Asia-Pacific Region Walter Leal Filho, 2015-04-02 This book investigates the socio-economic impacts of Climate Change in the Asia-Pacific region. The authors put forward a strategy and action plans that can enhance the capacity of government agencies and non-governmental organizations to reduce the negative impacts of climate change. The needs and interests of critical and neglected groups are highlighted throughout the book, alongside the need for improving knowledge management on climate change. The case studies presented offer regional analyses for countries such as Australia, Bangladesh, China, Fiji, India, Mongolia, Nepal and the Philippines and cover issues such as livelihood vulnerability and displacement, climate migration, macroeconomic impacts, urban environmental governance and disaster management.

International Disaster Response Law Andrea de Guttry, Marco Gestri, Gabriella Venturini, 2012-08-31 With a Foreword by Kristalina Georgieva, European Commissioner for International Cooperation, Humanitarian Aid and Crisis Response Over the last decades natural and man-made disasters have been increasing in terms of frequency, size, number of people affected and material damage caused. There is growing awareness of the importance of adequate national and international legal frameworks for disaster prevention, mitigation and response. The

implementation of these frameworks, however, poses serious challenges. This book analyses International Disaster Response Law as developed in recent times and identifies the main existing normative gaps. The authors address the rights and duties of States in preventing and mitigating disasters, in facilitating access to their territory for humanitarian relief actors, as well as issues related to liability and compensation. Due attention is paid to European Union law governing disaster response (and to its reform in the light of the Lisbon Treaty) and to the main trends in domestic legislation. Human rights obligations are thoroughly examined and the potential relevance of international criminal law is assessed. Additional topics such as the status of relief personnel, the hindrances to the delivery of relief consignments by customs and excise administration, the use of civilian and military defence assets in emergency situations, the mechanisms and procedures available to offer financial support for recovery and rehabilitation, risk insurance, and the issue of corruption during disaster-related activities are specifically addressed. By drawing on the expertise of lawyers, political scientists, economists and humanitarian practitioners, the book promotes much-needed interdisciplinary dialog and sheds light on a largely uncharted field of research. It is therefore essential reading for academics and practitioners in international and EU law, policy makers, civil protection and humanitarian operators and for anyone interested in exploring the legal facets of the international community's response to large-scale calamitous events. Climate Change [3 volumes] Bruce E. Johansen, 2017-09-15 This three-volume set presents entries and primary sources that will impress on

readers that what we do—or don't do—today regarding climate change will dramatically influence what life on this planet will be like for untold numbers of generations. How are the behaviors of birds, butterflies, and other migratory animals connected to climate change? What does the term thermal inertia mean, and what does this geophysical effect have on predicting what the planet's future will be like? What is the context for the effects we are seeing on various forms of animal life, from migrating birds to polar bears to mosquitoes that transmit Zika and other diseases? *Climate Change: An Encyclopedia of Science, Society, and Solutions* combines entries describing Earth's variable climatic history, references to scientific literature, weather record data, and selected primary documents to present readers with a comprehensive account of global warming's effects worldwide. By examining verifiable, quantitative information such as the frequency and intensity of hurricanes and changes in the hydrological cycle, as well as clear patterns and trends of alternating droughts and deluges and wildfires, melting ice, and rising seas, readers will be able to understand why scientists are so concerned about the future of our climate. Researchers will benefit from detailed explanations of scientific topics such as thermal inertia, feedbacks, and tipping points; and receive invaluable context on the role of energy use in climate change, including automobiles and air travel. Readers will learn about the role of China in the current global climate and in the future; the widespread effects of climate change on agriculture; and how indigenous peoples' lives are being impacted, from drought and the Navajos to hunters' lives in the Arctic. The work concludes with thought-provoking debates regarding potential solutions, from wind power and solar power to geo-engineering.

Integrative Observations and Assessments Shin-

ichi Nakano, Tetsukazu Yahara, Tohru

Nakashizuka, 2014-06-04 This volume focuses on new trends in monitoring biodiversity in the Asia-Pacific region, one of the most rapidly changing areas in the world. It provides reviews of the challenges in studying the spatial variability of biodiversity across various ecosystems. This book also describes newly developed concepts and methods for biodiversity observation including ubiquitous genotyping, systematic conservation, monitoring of the functions and services of ecosystems and biodiversity informatics. These contributions will lead to establishing integrative observations and assessments of biodiversity, essential for reporting the current status and for the effective conservation and sustainable use of biodiversity. This work will interest biodiversity researchers not only in the Asia-Pacific region but also across the entire globe.

Natural Disaster Management in the Asia-Pacific

Caroline Brassard, David W. Giles, Arnold M.

Howitt, 2014-11-18 The Asia-Pacific region is one of the most vulnerable to a variety of natural and manmade hazards. This edited book productively brings together scholars and senior public officials having direct experience in dealing with or researching on recent major natural disasters in the Asia-Pacific. The chapters focus on disaster preparedness and management, including pre-event planning and mitigation, crisis leadership and emergency response, and disaster recovery. Specific events discussed in this book include a broad spectrum of disasters such as tropical storms and typhoons in the Philippines; earthquakes in China; tsunamis in Indonesia, Japan, and Maldives; and bushfires in Australia. The book aims to generate discussions about improved risk reduction strategies throughout the

region. It seeks to provide a comparative perspective across countries to draw lessons from three perspectives: public policy, humanitarian systems, and community engagement.

The Dock and Harbour Authority, 1980

How the World Breaks Stan Cox, Paul Cox, 2016-07-12 We've always lived on a dangerous planet, but its disasters aren't what they used to be. *How the World Breaks* gives us a breathtaking new view of crisis and recovery on the unstable landscapes of the Earth's hazard zones. Father and son authors Stan and Paul Cox take us to the explosive fire fronts of overheated Australia, the future lost city of Miami, the fights over whether and how to fortify New York City in the wake of Sandy, the Indonesian mud volcano triggered by natural gas drilling, and other communities that are reimagining their lives after quakes, superstorms, tornadoes, and landslides. In the very decade when we should be rushing to heal the atmosphere and address the enormous inequalities of risk, a strange idea has taken hold of global disaster policy: resilience. Its proponents say that threatened communities must simply learn the art of resilience, adapt to risk, and thereby survive. This doctrine obscures the human hand in creating disasters and requires the planet's most beleaguered people to absorb the rush of floodwaters and the crush of landslides, freeing the world economy to go on undisturbed. The Coxes' great contribution is to pull the disaster debate out of the realm of theory and into the muck and ash of the world's broken places. There we learn that change is more than mere adaptation and life is more than mere survival. Ultimately, *How the World Breaks* reveals why—unless we address the social, ecological, and economic roots of disaster—millions more people every year will find themselves spiraling into misery. It is essential reading for our time.

Engaging Isolated Communities in Disaster Preparation and Communication in the Philippines

Dennis John Sumaylo,2023-09-04 This book provides an account of how local government units in the Philippines engage marginalized and geographically isolated communities in taking part in pre-disaster communication efforts. The book focuses on communities classified by the government as Geographically Isolated and Disadvantaged Areas (GIDA) on the culturally rich island of Mindanao, Philippines. The focus is centered on GIDA communities because they are assumed to receive less information and help in relation to their circumstances. This book accounts for the disaster preparedness communicative conditions of people living in GIDAS and identifies synergies and tensions in the engagement process. As such, specific branches of enquiry focus on how information-seeking and sharing experiences of GIDA communities inform the current practice of community engagement. In taking this research approach, this book deliberately gives voice to these marginalized and often silenced communities. In general, the study examines other possibilities (or variables) in the pre-disaster risk communication process that truly engage geographically isolated and socioeconomically disadvantaged communities in disaster risk reduction and management (DRRM). Considering the existing methodologies used to engage local communities in DRRM, this book looks at ways in which bottom-up and top-down approaches could be melded together for a transformational level of engagement in these communities. The novelty of

addressing issues concerning geographically isolated communities in a developing country is a research track worthy of being investigated by academics. The book is of interest to students and in development communication and disaster risk communication as well as community engagement practitioners specializing in DRRM. The framework proposed in this book for engaging isolated communities is helpful to practitioners in designing, planning, and implementing pre-disaster communication and community engagement programs.

Yearbook of the United Nations 2013 United Nations DPI,2018-03-19 With its comprehensive coverage of political and security matters, human rights issues, economic and social questions, legal issues, and institutional, administrative and budgetary matters, the Yearbook of the United Nations stands as the most authoritative reference work on the activities and concerns of the Organization. Fully indexed, the Yearbook includes the texts of all major General Assembly, Security Council and Economic and Social Council resolutions and decisions, putting all of these in a narrative context of United Nations consideration, decision and action.
