**Engineering Aspects of Cereal and Cereal-Based Products** Raquel de Pinho Ferreira Guine,Paula Maria dos Reis Correia,2016-04-19 Cereal food engineering has become increasingly important in the food industry over the years, as it plays a key role in developing new food products and improved manufacturing processes. Engineering Aspects of Cereal and Cereal-Based Products focuses on the recent growth in cereal technology and baked foods science, reviewing the latest updates in technological developments in agricultural cultivation and processing for cereal scientists, food engineers, and students. Cereals include a vast number of biochemical entities, very diverse in composition and properties, as well as technological abilities. The text discusses cereal production, which varies according to cultural practices, type of cereal, cultivar, and region. It also addresses transportation, storage, and cereal quality—important at every phase from harvest to production. Chapters cover technological operations such as wet and dry milling and extrusion, and they address particular processing operations that are subject to improvements, including bread and confectionary baking. The text also examines malting, rice processing, breakfast cereals, and pasta. In addition, it explores new trends in cereal-based products and the effects of processing on nutritional and functional properties of cereal products. This book discusses the basic elements of cereal technology, from production to transformation, including the most important processing operations in cereal technology, with emphasis on the engineering aspects.

*Transporting Operations of Food Materials within Food Factories* Seid Mahdi Jafari,Narjes Malekjani,2022-08-26 Transporting Operations of Food Materials within Food Factories, a volume in the Unit Operations and Processing Equipment in the Food Industry series, explains the processing operations and equipment necessary for storage and transportation of food materials within food production factories. Divided into four sections, Receiving and storage facilities, Liquid food transportation, Solid and semi- solid transportation and General material handling machines in food plants, all sections emphasize basic content relating to experimental, theoretical, computational and/or applications of food engineering principles and relevant processing equipment. Written by experts in the field of food engineering in a simple and dynamic way, the book targets all who are engaged in worldwide food processing operations, giving readers comprehensive knowledge and an understanding of different transporting facilities and equipments. Thoroughly explores alternatives in food processing through innovative transporting operations Brings novel applications of pumping and conveying operations in food industries Covers how to improve the quality and safety of food products with good transporting operations

Cereal Grains Sergio O. Serna-Saldivar,2016-04-19 While cereals remain the world's largest food yield - with more than 2.3 billion metric tons produced annually - consumer demands are on the rise for healthier cereal products with greater nutrition. Cereal Grains: Properties, Processing, and Nutritional Attributes provides a complete exploration of the scientific principles related to domesticatio

Detecting Foreign Bodies in Food M Edwards,2004-04-22 Foreign bodies are the biggest single source of customer complaints for many food manufacturers, retailers and enforcement authorities. Foreign bodies are any undesirable solid objects in food and range from items entirely unconnected with the food such as glass or metal fragments to those related to the food such as bones or fruit stalks. Detecting foreign bodies in food discusses ways of preventing and managing incidents involving foreign bodies and reviews the range of current methods available for the detection and control of foreign bodies, together with a number of new and developing technologies. Part one addresses management issues, with chapters on identifying potential sources of foreign bodies, good manufacturing practice (GMP), the role of the hazard analysis and critical control point (HACCP) system and how best to manage incidents involving foreign bodies. The book also includes a chapter on the laboratory identification of foreign bodies. Part two examines methods for the detection and removal of foreign bodies. There are chapters on existing methods, including metal detection, magnets, optical sorting, X-ray systems and physical separation methods. Other chapters consider research on potential new technologies, including surface penetrating radar, microwave reflectance, nuclear magnetic resonance, electrical impedance and ultrasound. Detecting foreign bodies in food is a standard reference for all those concerned with ensuring the safety of food. Discusses ways of preventing and managing incidents involving foreign bodies Reviews the range of technologies available for effective detection and control of foreign bodies

**Wheat** W. Bushuk,V.F. Rasper,2012-12-06 Wheat provides over 20% of the calories for the world population of 5. 3 billion persons. It is widely grown in five of the six continents. It is a highly versatile food product in that it can be stored safely for long periods of time and transported in bulk over long distances. In relative terms, it is reasonably priced; over the past quarter century, the inflation-adjusted price of wheat has been declining. Modern milling and baking technology required for the transformation of wheat grain into consumable baked products is available or accessible in all countries of the world. For these reasons, and because Canada is one of world's leading wheat producing countries, it seemed appropriate to include a major symposium on wheat in the scientific and technical program of the 8th World Congress of Food Science and Technology held in Toronto, Canada during September 29-October 4, 1992. In selecting the topics for the symposium on wheat, we attempted to cover a full range of subjects including economics and marketing, nutrition, grading, processing, constituent chemistry and functionality, biote- nology, and safety of genetically modified wheat varieties. The major focus was on common hard (bread) wheats; separate papers were devoted to the unique characteristics and technological properties of common soft (biscuit) and durum (pasta) wheats. Each paper was presented by an acknowledged international expert. This book provides a more permanent record of the papers presented at the symposium.
