**Foundational and Practical Aspects of Resource Analysis** Marko van Eekelen, Olha Shkaravska, 2010-09-08 This book constitutes the refereed proceedings of the First International Workshop on Foundational and Practical Aspects of Resource Analysis, FOPARA 2009, held at the 16th International Symposium on Formal Methods, FM 2009, in Eindhoven, The Netherlands, in November 2009. The 10 revised full papers were carefully reviewed and selected from 13 research presentation contributions and one invited lecture.

*Enumerative Geometry and String Theory* Sheldon Katz, 2006 Perhaps the most famous example of how ideas from modern physics have revolutionized mathematics is the way string theory has led to an overhaul of enumerative geometry, an area of mathematics that started in the eighteenth century. Century-old problems of enumerating geometric configurations have now been solved using new and deep mathematical techniques inspired by physics! The book begins with an insightful introduction to enumerative geometry. From there, the goal becomes explaining the more advanced elements of

enumerative algebraic geometry. Along the way, there are some crash courses on intermediate topics which are essential tools for the student of modern mathematics, such as cohomology and other topics in geometry. The physics content assumes nothing beyond a first undergraduate course. The focus is on explaining the action principle in physics, the idea of string theory, and how these directly lead to questions in geometry. Once these topics are in place, the connection between physics and enumerative geometry is made with the introduction of topological quantum field theory and quantum cohomology.

**Algebra and its Applications** Syed Tariq Rizvi, Asma Ali, Vincenzo De Filippis, 2016-11-18 This book discusses recent developments and the latest research in algebra and related topics. The book allows aspiring researchers to update their understanding of prime rings, generalized derivations, generalized semiderivations, regular semigroups, completely simple semigroups, module hulls, injective hulls, Baer modules, extending modules, local cohomology modules, orthogonal lattices, Banach algebras, multilinear polynomials, fuzzy ideals, Laurent power series, and Hilbert functions. All the contributing authors are leading international academicians and researchers in their respective fields. Most of the papers were presented at the international conference on Algebra and its Applications (ICAA-2014), held at Aligarh Muslim University, India, from December 15–17, 2014. The book also includes papers from mathematicians who couldn't attend the conference. The conference has emerged as a powerful forum offering researchers a venue to meet and discuss advances in algebra and its applications, inspiring further research directions.

**Left Atrial Appendage Occlusion, An Issue of Cardiac Electrophysiology Clinics, E-Book** Matthew

James Daniels,2023-04-18 In this issue of Cardiac Electrophysiology Clinics, guest editor Dr. Matthew J. Daniels brings his considerable expertise to the topic of Left Atrial Appendage Occlusion. Top experts in the field discuss topics such as pre-cath laboratory planning for left atrial appendage occlusion: optional or essential; the case for intracardiac echo to guide left atrial appendage closure; follow-up imaging after left atrial appendage occlusion: something or nothing and for how long?; left atrial appendage closure: what the evidence does and does not reveal; and more. Contains 11 practice-oriented topics including the strengths and weaknesses of the LAA covering disc occluders; left atrial appendage occlusion strengths and weaknesses of the lobe-only occluder concept in theory and in practice; the strengths and weaknesses of left atrial appendage ligation or exclusion (LARIAT, AtriaClip, Surgical Suture); the future of LAAC—in 5, 10, and 20 years; and more. Provides in-depth clinical reviews on left atrial appendage occlusion, offering actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant, topic-based reviews.

*Computational Models of Argument* Philippe Besnard, Sylvie Doutre, Anthony Hunter, 2008 Focuses on the aim to develop software tools to assist users in constructing and evaluating arguments and counterarguments and/or to develop automated systems for constructing and evaluating arguments and counterarguments. This book includes articles, which provide a snapshot of research questions in the area of computational models of argument.

**Colloid and Interface Science V3** Milton Kerker, 2012-12-02 Colloid and Interface Science, Volume III: Adsorption, Catalysis, Solid Surfaces, Wetting, Surface Tension, and Water covers the proceedings of the International Conference on Colloids and Surfaces, held in San Juan, Puerto Rico on June 21-25, 1976. The conference is sponsored jointly by the Division of Colloid and Surface Chemistry of the American Chemical Society and the International Union of Pure and Applied Chemistry in celebration of the 50th Anniversary of the Division and the 50th Colloid and Surface Science Symposium. This volume contains 56 chapters that cover the subjects of adsorption, catalysis, solid surfaces, wetting, surface tension, and water. Other topics discussed include chemisorption; analytical methods for surface analysis; reaction kinetics; polymeric colloid systems; hydrogel-water interface; and the effect of various parameters, such as temperature and pressure. The concluding chapters explore surface and interfacial tension measurement, capillarity, thermal expansion of water, and heat capacity of vicinal water.
