Voices of Vietnam Lonán Ó Briain, 2021 Introduction. On Radio, Red Music, and Revolution -- Sound, Technology, and Culture in French Indochina -- Battle of the Airwaves during the First Indochina War -- Songs of the Golden Age in the Democratic Republic -- National Radio in the Reform Era -- Studio Production in Contemporary Vietnam -- Conclusion. Nostalgia for the Past, Hope for the Future.

Voices of Vietnam Lonán Ó Briain, 2021-09-16 On September 2, 1945, Ho Chi Minh read out the Vietnamese Declaration of Independence over a makeshift wired loudspeaker system to thousands of listeners in Hanoi. Five days later, Ho's Viet Minh forces set up a clandestine radio station using equipment brought to Southeast Asia by colonial traders. The revolutionaries garnered support for their coalition on air by interspersing political narratives with red music (nh.ac /d?o). Voice of Vietnam Radio (VOV) grew from these communist and colonial foundations to become one of the largest producers of music in contemporary Vietnam. In this first comprehensive English-language study on the history of radio music in mainland Southeast Asia, Lonán Ó Briain examines the broadcast voices that reconfigured Vietnam's cultural, social, and political landscape over a century. Ó Briain draws on a year of ethnographic fieldwork at the VOV studios (2016-17), interviews with radio employees and listeners, historical recordings and broadcasts, and archival research in Vietnam, France, and the United States. From the Indochinese radio clubs of the 1920s to the 75th anniversary celebrations of the VOV in 2020, *Voices of Vietnam: A Century of Radio, Red Music, and Revolution* offers a fresh perspective on this turbulent period by demonstrating how music production and sound reproduction are integral to the unyielding process of state formation.

Disability, Sexuality, and Gender in Asia Wanhong Zhang, Elisabeth Perioli Bjørnstøl, Peng Ding, Wei Gao, Hanxu Liu, Yijun Liu, 2023-08-01 This book introduces experiential knowledge of the intersectionality of disability, sexuality, and gender equality issues. Scholars and disabled persons' organizations in different Asian countries such as China, Vietnam, Myanmar, Nepal, and Japan have contributed to the book. It is a preliminary introduction of the frontline practice of Asian disability activism and the experience of women and LGBTIQ people with disabilities. It presents the direct participation of disability advocates in mapping how both women with disabilities and LGBTIQ individuals with disabilities realize their rights such as identity, work rights, personal safety, and sexual rights. Studies presented here explore the experience of empowering diverse disability groups and advocating for equality and non-discrimination. It explains how to use the leverage of the Convention on the Rights of Persons with Disabilities (CRPD) for further human rights campaigns in a broader context for disadvantaged groups. This collection is the product of a participatory research project, which aims to increase the capabilities of local disabled persons' organizations and NGOs in utilizing human rights laws and encourage dialogue and collaboration between academia, people with disabilities, and human rights advocates. It will be essential reading for academics, researchers, policy-makers, and campaign groups.

Analysis of Markov Chain Models of Adaptive Processes K. R. Kaplan, Jack Sklansky, 1965 Learning and adaptation are considered to be stochastic in nature by most modern psychologists and by many engineers. Markov chains are among the simplest and best understood models of stochastic processes and, in recent years, have frequently found application as models of adaptive processes. A number of new techniques are developed for the analysis of synchronous and asynchronous Markov chains, with

emphasis on the problems encountered in the use of these chains as models of adaptive processes. Signal flow analysis yields simplified computations of asymptotic success probabilities, delay times, and other indices of performance. The techniques are illustrated by several examples of adaptive processes. These examples yield further insight into the relations between adaptation and feedback. (Author).

Difference Methods for Initial-Boundary-Value Problems and Flow Around Bodies You-lan Zhu,Xi-chang Zhong,Bing-mu Chen,Zuo-min Zhang,2013-06-29 Since the appearance of computers, numerical methods for discontinuous solutions of quasi-linear hyperbolic systems of partial differential equations have been among the most important research subjects in numerical analysis. The authors have developed a new difference method (named the singularity-separating method) for quasi-linear hyperbolic systems of partial differential equations. Its most important feature is that it possesses a high accuracy even for problems with singularities such as shocks, contact discontinuities, rarefaction waves and detonations. Besides the thorough description of the method itself, its mathematical foundation (stability-convergence theory of difference schemes for initial-boundary-value hyperbolic problems) and its application to supersonic flow around bodies are discussed. Further, the method of lines and its application to blunt body problems and conical flow problems are described in detail. This book should soon be an important working basis for both graduate students and researchers in the field of partial differential equations as well as in mathematical physics.

The New York Times Film Reviews 1999-2000 New York Times Theater

Reviews,2001-12 From the Oscar-winning blockbusters *American Beauty* and *Shakespeare in Love* to Sundance oddities like *American Movie* and *The Tao of Steve*, to foreign films such as *All About My Mother*, the latest volume in this popular series features a chronological collection of facsimiles of every film review and awards article published in *The New York Times* between January 1999 and December 2000. Real Analysis (Classic Version) Halsey Royden,Patrick Fitzpatrick,2017-02-13 This text is designed for graduate-level courses in real analysis. *Real Analysis*, 4th Edition, covers the basic material that every graduate student should know in the classical theory of functions of a real variable, measure and integration theory, and some of the more important and elementary topics in general topology and normed linear space theory. This text assumes a general background in undergraduate mathematics and familiarity with the material covered in an undergraduate course on the fundamental concepts of analysis.

Molecular Symmetry and Spectroscopy Philip Bunker,2012-12-02 *Molecular Symmetry and Spectroscopy* deals with the use of group theory in quantum mechanics in relation to problems in molecular spectroscopy. It discusses the use of the molecular symmetry group, whose elements consist of permutations of identical nuclei with or without inversion. After reviewing the permutation groups, inversion operation, point groups, and representation of groups, the book describes the use of representations for labeling molecular energy. The text explains an approximate time independent Schrödinger equation for a molecule, as well as the effect of a nuclear permutation or the inversion of E^* on such equation. The book also examines the expression for the complete molecular Hamiltonian and the several groups of operations commuting with the Hamiltonian. The energy levels of the Hamiltonian can then be symmetrically labeled by the investigator using the irreducible representations of these groups. The text explains the two techniques to change coordinates in a Schrödinger equation, namely, (1) by using a diatomic molecule in the rovibronic Schrödinger equation, and (2) by a rigid nonlinear

polyatomic molecule. The book also explains that using true symmetry, basis symmetry, near symmetry, and near quantum numbers, the investigator can label molecular energy levels. The text can benefit students of molecular spectroscopy, academicians, and investigators of molecular chemistry or quantum mechanics.

Heaven's Ambassador Kevin Sullivan, 2015-12-22 My name is Kevin Sullivan. I am the author of a NEW book series entitled: Heavens Ambassador. It is the most influential, thought-provoking, Christian book series of the 21st Century. I wrote this book for anyone who is interested in learning what it takes to become an Ambassador of Heaven. In case you didn't know, an Ambassador of Heaven is someone who: dominates the Father of Lies, discerns the deceitfulness of worldly wisdom, and actualizes the power of heavenly wisdom. In order to adequately address this topic, I wrote this book in 4 volumes. Volumes 1 and 2 admonishes the recklessness and foolishness of worldly wisdom. Volume 3 is a compilation of the main points of Volumes 1 and 2, which exposes the worthlessness of worldly wisdom. And Volume 4 reveals secrets to maintaining relationships with your spouse and children that are pleasing to God. My books are simple enough for a 5th grader to understand and deep enough for a Ph.D. student to embrace. Show your family some love and buy a few copies. They are the perfect empowerment tools for middle school, high school, and college bound family members; and make excellent birthday, graduation, and Christmas gifts.

Advanced Calculus Lynn Harold Loomis, Shlomo Sternberg, 2014-02-26 An authorised reissue of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention *Differential and Integral Calculus* by R Courant, *Calculus* by T Apostol, *Calculus* by M Spivak, and *Pure Mathematics* by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.
