Judaic Technologies of the Word Gabriel Levy, 2014-10-14 Judaic Technologies of the Word argues that Judaism does not exist in an abstract space of reflection. Rather, it exists both in artifacts of the material world - such as texts - and in the bodies, brains, hearts, and minds of individual people. More than this, Judaic bodies and texts, both oral and written, connect and feed back on one another. Judaic Technologies of the Word examines how technologies of literacy interact with bodies and minds over time. The emergence of literacy is now understood to be a decisive factor in religious history, and is central to the transformations that took place in the ancient Near East in the first millennium BCE. This study employs insights from the cognitive sciences to pursue a deep history of Judaism, one in which the distinctions between biology and culture begin to disappear.

Linking Language, Trade and Migration Ruriko Otomo, 2023-06-21 This book examines the effect of trade policy on language which represents an underrecognized area in the field of language policy and planning. It argues that trade policies like Japan's Economic Partnership Agreements (EPAs) have important consequences for national language (education) policies and for discourses about language and nation. Since 2008, Japan has signed the EPAs with Indonesia, the Philippines and Vietnam to recruit migrant nurses and eldercare workers and manage their mobility by means of pre-employment language training and the Japanese-medium licensure examinations. Through the analysis of these language management devices, this book demonstrates that the EPAs are a manifestation and representation of contemporary language issues intertwined particularly with pressing issues of Japan's social aging and demographic change. As the EPAs are intertwined with welfare, economy, social cohesion, and international political and economic relations and competitiveness, the book presents a far more complex picture of and a richer potential of language policy.

Cryptology Richard E. Klima, Neil P. Sigmon, 2012-06-20 Easily Accessible to Students with Nontechnical Backgrounds In a clear, nontechnical manner, Cryptology: Classical and Modern with Maplets explains how fundamental mathematical concepts are the bases of cryptographic algorithms. Designed for students with no background in college-level mathematics, the book assumes minimal mathematical prerequisites and incorporates student-friendly Maplets throughout that provide practical examples of the techniques used. Technology Resource By using the Maplets, students can complete complicated tasks with relative ease. They can encrypt, decrypt, and cryptanalyze messages without the burden of understanding programming or computer syntax. The authors explain topics in detail first before introducing one or more Maplets. All Maplet material and exercises are given in separate, clearly labeled sections. Instructors can omit the Maplet sections without any loss of continuity and non-Maplet examples and exercises can be completed with, at most, a simple hand-held calculator. The Maplets are available for download at www.radford.edu/~npsigmon/cryptobook.html. A Gentle, Hands-On Introduction to Cryptology After introducing elementary methods and techniques, the text fully develops the Enigma cipher machine and Navajo code used during World War II, both of which are rarely found in cryptology textbooks. The authors then demonstrate mathematics in cryptology through monoalphabetic, polyalphabetic, and block ciphers. With a focus on public-key cryptography, the book describes RSA ciphers, the Diffie–Hellman key exchange, and ElGamal ciphers. It also explores current U.S. federal cryptographic standards, such as the AES, and explains how to authenticate messages via digital signatures, hash functions, and certificates.

Catholics and Everyday Life in Macau Chen Hon-Fai, 2017-03-16 Catholicism has had an important place in Macau since the earliest days of Portuguese colonization in the sixteenth century. This book, based on extensive original research including in-depth interviews, examines in detail the everyday life of Catholics in Macau at present. It outlines the tremendous societal pressures which Macau is currently undergoing – sovereignty handover and its consequences, the growth of casinos and tourism and the transformation of a serene and somewhat obscure colony into a vibrantly developing city. It shows how, although the formal structures of Catholicism no longer share in rule by the colonial power, and although formal religious observance is declining, nevertheless the personal piety and ethical religious outlook of individual Catholics continue to be strong, and have a huge, and possibly increasing, impact on public life through the application of personal religious ethics to issues of human rights and social justice and in the fields of education and social services.

Contemporary Queer Chinese Art Hongwei Bao, Diyi Mergenthaler, Jamie J. Zhao, 2023-06-15 Contemporary Queer Chinese Art is the first English-language academic book that explores the intersections of queer culture and contemporary Chinese art from the mid-1980s to the present. Examining contemporary visual art, performance and activism, this book offers a rich archive of queer Chinese artistic expressions. It provides valuable insights into the status quo and intersectional struggles of Chinese artists who identify themselves as queer and who have associated their work with queer positionalities and perspectives. By sharing personal experiences, art expressions and critical insights about what it means to be queer and Chinese in a transnational context, the book reveals multiple forms and potentialities of queer politics in the domains of art and activism.

Business, Economic and Financial Issues in Emerging Markets and Advanced Economies after the COVID-19 Crisis Giray Gozgor, Chi Lau, 2023-11-22 This Research Topic is Volume 2 in the Research Topic series 'Economic and Financial Issues in the Post-COVID-19 World: Implications and Role of Public Health'. Both developed and developing economies have experienced significant risks and uncertainties due to the COVID-19 pandemic. There are still risks and uncertainty shocks of the COVID-19 in every aspect of the global economic and financial system, including investors' decisions and the financial sector's development. In this Research Topic, we aim to understand the dynamics of business, economic, and financial issues - including potential structural changes after the COVID-19 in emerging markets and advanced economies. This Research Topic's main goal is to provide different aspects and consequences of economic and financial issues in emerging markets and advanced economies after the COVID-19 pandemic. In particular, we welcome interdisciplinary, empirical, and theoretical papers (panel data studies, survey studies, and time-series analyses) focusing on the business, economic, and financial issues after the COVID-19 crisis. We also welcome policy briefs of people working at central banks, governments, and other public institutions, focusing on these issues.

Behavioral Cybersecurity Wayne Patterson,Cynthia E. Winston-Proctor,2020-12-07 This book discusses the role of human personality in the study of behavioral cybersecurity for non-specialists. Since the introduction and proliferation of the Internet, cybersecurity maintenance issues have grown exponentially. The importance of behavioral cybersecurity has recently been amplified by current events, such as misinformation and cyber-attacks related to election interference in the United States and internationally. More recently, similar issues have occurred in the context of the COVID-19 pandemic. The book presents profiling approaches, offers case studies of major cybersecurity events and provides analysis of password attacks and defenses. Discussing psychological methods used to assess behavioral cybersecurity, alongside risk management, the book also describes game theory and its applications, explores the role of cryptology and steganography in attack and defense scenarios and brings the reader up to date with current research into motivation and attacker/defender personality traits. Written for practitioners in the field, alongside nonspecialists with little prior knowledge of cybersecurity, computer science, or psychology, the book will be of interest to all who need to protect their computing environment from cyber-attacks. The book also provides source materials for courses in this growing area of behavioral cybersecurity.

Error Correction Coding Todd K. Moon,2020-12-22 Providing in-depth treatment of error correction Error Correction Coding: Mathematical Methods and Algorithms, 2nd Edition provides a comprehensive introduction to classical and modern methods of error correction. The presentation provides a clear, practical introduction to using a lab-oriented approach. Readers are encouraged to implement the encoding and decoding algorithms with explicit algorithm statements and the mathematics used in error correction, balanced with an algorithmic development on how to actually do the encoding and decoding. Both block and stream (convolutional) codes are discussed, and the mathematics required to understand them are introduced on a “just-in-time” basis as the reader progresses through the book. The second edition increases the impact and reach of the book, updating it to discuss recent important technological advances. New material includes: Extensive coverage of LDPC codes, including a variety of decoding algorithms. A comprehensive introduction to polar codes, including systematic encoding/decoding and list decoding. An introduction to fountain codes. Modern applications to systems such as HDTV, DVBT2, and cell phones Error Correction Coding includes extensive program files (for example, C++ code for all LDPC decoders and polar code decoders), laboratory materials for students to implement algorithms, and an updated solutions manual, all of which are perfect to help the reader understand and retain the content. The book covers classical BCH, Reed Solomon, Golay, Reed Muller, Hamming, and convolutional codes which are still component codes in virtually every modern communication system. There are also fulsome discussions of recently developed polar codes and fountain codes that serve to educate the reader on the newest developments in error correction.

Digital Television John Arnold,Michael Frater,Mark Pickering,2007-10-26 The only single, comprehensive textbook on all aspects of digital television. The next few years will see a major revolution in the technology used to deliver television services as the world moves from analog to digital television. Presently, all existing textbooks dealing with analog television standards (NTSC and PAL) are becoming obsolete as the prevalence of digital technology continues to become more widespread. Now, Digital Television: Technology and Standards fills the need for a single, authoritative textbook that covers all aspects of digital television technology. Divided into three main sections, Digital Television explores: * Video: MPEG-2, which is at the heart of all digital video broadcasting services * Audio: MPEG-2 Advanced Audio Coding and Dolby AC-3, which will be used internationally in digital video broadcasting systems * Systems: MPEG, modulation transmission, forward error correction, datacasting, conditional access, and digital storage media command and control Complete with tables, illustrations, and figures, this valuable textbook includes problems and laboratories at the end of each

chapter and also offers a number of exercises that allow students to implement the various techniques discussed using MATLAB. The authors' coverage of implementation and theory makes this a practical reference for professionals, as well as an indispensable textbook for advanced undergraduates and graduate-level students in electrical engineering and computer science programs.
