A Pattern Language Christopher Alexander, 2018-09-20 You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely. The three books are *The Timeless Way of Building*, *The Oregon Experiment*, and this book, *A Pattern Language*. At the core of these books is the idea that people should design for themselves their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain languages, which, like the languages we speak, allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. Patterns, the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seems likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

Building a Grouse Dog Craig Doherty,2019-04-10 *Building a Grouse Dog: From Puppy to Polished Performer* by Craig Doherty, is the most comprehensive, how-to manual there is for taking an eight-week-old little squirmer of any pointing breed and turning him or her into that most coveted game bird finder there is: a finished grouse dog. Unlike many general pointing-dog training books, this one concentrates on one species – the ruffed grouse. Grouse are notorious for their caginess, their wariness, and their difficulty in being pinned down so a hunter can get close enough to flush and shoot. It takes a dog that has been trained nearly from birth to handle that task, and no one knows

how to do it better than Craig Doherty. Craig was the driving force behind Field Trial Magazine, is a columnist for The Pointing Dog Journal, regularly competes in grouse trials throughout the Northeast, professionally trains grouse dogs for clients from all over the country, and – this is important – guides grouse hunters using his own dogs trained in his outstanding methods; important because paying clients need results, and those results can only come by following dogs that know the game. A number of how-to training books tell you what to do from beginning to end; but if you have started your own training, run into problems, and consult the literature, many times you'll find that the advice is something along the lines of, "Well, you messed up because you didn't do X, Y, and Z. Remember that so you won't ruin your next dog." Not Craig – if you have run into a snag with your current dog, Craig tells you what to do to get past it and on with the dog's completed training. So if your aim, your goal, is to own and hunt behind a finished grouse dog that knows what's what in the coverts, *Building a Grouse Dog* is the best guide you'll ever have.
