**Climate change: Unpacking the burden on food safety** Food and Agriculture Organization of the United Nations, 2020-03-01 Climate change is causing unprecedented damage to our ecosystem. Increasing temperatures, ocean warming and acidification, severe droughts, wildfires, altered precipitation patterns, melting glaciers, rising sea levels and amplification of extreme weather events have direct implications for our food systems. While the impacts of such environmental factors on food security are well known, the effects on food safety receive less attention. The purpose of Climate change: Unpacking the burden on food safety is to identify and attempt to quantify some current and anticipated food safety issues that are associated with climate change. The food safety hazards considered in the publication are foodborne pathogens and parasites, harmful algal blooms, pesticides, mycotoxins and heavy metals with emphasis on methylmercury. There is also, a dedicated section on the benefits of forward-looking approaches such as horizon scanning and foresight, which will not only aid in anticipating future challenges in a shifting global food safety landscape, but also help build resilient food systems that can be continually updated as more knowledge is assimilated. By building a more widespread and better understanding of the consequences climate change has on food safety, it is hoped that this document will aid in fostering stronger international cooperation in making our food safer by reducing the global burden of these concerns.

**Cardiac Regeneration** Masaki Ieda, Wolfram-Hubertus Zimmermann, 2017-10-27 This Volume of the series Cardiac and Vascular Biology offers a comprehensive and exciting, state-of-the-art work on the current options and potentials of cardiac regeneration and repair. Several techniques and approaches have been developed for heart failure repair: direct injection of cells, programming of scar tissue into functional myocardium, and tissue-engineered heart muscle support. The book introduces the rationale for these different approaches in cell-based heart regeneration and discusses the most important considerations for clinical translation. Expert authors discuss when, why, and how heart muscle can be salvaged. The book represents a valuable resource for stem cell researchers, cardiologists, bioengineers, and biomedical scientists studying cardiac function and regeneration.

**Utility of Bromelain and N-Acetylcysteine in Treatment of Peritoneal Dissemination of Gastrointestinal Mucin-Producing Malignancies** Afshin Amini, Samar Masoumi-Moghaddam, David L. Morris, 2016-03-05 This volume will describe both growth-inhibitory and mucin-depleting effects of bromelain and N-acetylcysteine, on their own or in combination, in cancer. It will coherently review the pathophysiological aspects of the mucin glycoproteins in malignancies and provide an updated account of the status of bromelain and N-acetylcysteine in cancer therapy. The volume will develop the idea of using these two drugs as a combination formulation for mucin-depleting effects.

**Festivalisation of Urban Spaces** Waldemar Cudny, 2016-06-03 This is a multi-disciplinary scientific monograph referring to urban geography, urban regions management, event studies, tourism geography, cultural anthropology and sociology. It covers issues which are typically related to the most popular type of events: festivals. This book studies the origins, history, and the main factors of festival development, as well

as the concept of a festival in the context of various scientific disciplines. It presents the existing festival typologies as well as the author's own comprehensive typology. The theoretical part concerns the basic research methods and approaches used in the analysis of these events, as well as their impacts on the urban space in the physical (festival facilities), social (a place where people may pursue their interests, meet with family and friends) and cultural aspect. The economic aspect of festivals (generating jobs and income from tourism, using festivals for city branding, etc.) is also discussed. The book presents practical examples in sub-chapters, references to literature (further reading) and the case study of the influence of festivals on urban space management and urban development, using the example of Łódź – a Polish post-socialist city. It may also be treated as a supplementary course book for students of urban geography, urban regions management, tourism, event management and, to a certain extent, anthropology of culture and sociology.

**Oxidative Stress in Heart Diseases** Sajal Chakraborti, Naranjan S Dhalla, Nirmal K Ganguly, Madhu Dikshit, 2019-11-06 This book bridges the gap between fundamental and translational research in the area of heart disease. It describes a multidisciplinary approach, and demonstrates biochemical mechanisms associated with dysregulation of redox signaling, which leads heart disease. Presenting recent studies on improved forms of ROS scavenging enzymes; specific inhibitors for different ROS generating enzymes; and oxidant induced signaling pathways and their antagonists that allow subtle modulation of redox signaling, it also discusses the spatial and temporal aspects of oxidative stress in the cardiovascular system, which are of vital importance in developing better strategies for treating heart disease. Each chapter offers researchers valuable insights into identifying targets for drug development for different types of heart disease.

Comparative Company Law Carsten Gerner-Beuerle, Michael Anderson Schillig, 2019-05-06 Comparative Company Law provides a systematic and coherent exposition of company law across jurisdictions, augmented by extracts taken from key judgments, legislation, and scholarly works. It provides an overview of the legal framework of company law in the US, the UK, Germany, and France, as well as the legislative measures adopted by the EU and the relevant case law of the Court of Justice. The comparative analysis of legal frameworks is firmly grounded in legal history and legal and economic theory and bolstered by numerous extracts (including extracts in translation) that offer the reader an invaluable insight into how the law operates in context. The book is an essential guide to how company law cuts across borders, and how different jurisdictions shape the corporate lifespan from its formation by way of incorporation to its demise (corporate insolvency) and eventual dissolution. In addition, it offers an introduction to the nature of the corporation, the framework of EU company law, incorporation and corporate representation, agency problems in the firm, rights of stakeholders and shareholders, neutrality and defensive measures in corporate control transactions, legal capital, piercing the corporate veil, and corporate insolvency and restructuring law.

**A Modern History of German Criminal Law** Thomas Vormbaum, 2013-10-01 Increasingly, international governmental networks and organisations make it necessary to master the legal principles of other jurisdictions. Since the advent of international criminal tribunals this need has fully reached criminal law. A large part of their work is based on comparative research. The legal systems which contribute most to this systemic discussion are common law and civil law, sometimes called continental law. So far this dialogue appears to have been dominated by the former. While there are many reasons for this, one stands out very clearly: Language. English has become the lingua franca of international legal research. The present book addresses this issue. Thomas Vormbaum is one of the foremost German legal historians and the book's original has become a cornerstone of research into the history of German criminal law beyond doctrinal expositions; it allows a look at the system's genesis, its ideological, political and cultural roots. In the

field of comparative research, it is of the utmost importance to have an understanding of the law's provenance, in other words its historical DNA.

**Nutrition and Cardiovascular Health** Paramjit S. Tappia, Heather Blewett, 2020-06-17 There is unequivocal experimental, epidemiological, and clinical evidence demonstrating a correlation between diet and increased risk of cardiovascular disease (CVD). While nutritionally-poor diets can have a significant negative impact on cardiovascular health, dietary interventions with specific nutrients and/or functional foods are considered cost-effective and efficient components of prevention strategies. It has been estimated that nutritional factors may be responsible for approximately 40% of all CVD. Indeed, in one of the seminal studies conducted on modifiable risk factors and heart health (the INTERHEART study), >90% of all myocardial infarctions were attributed to preventable environmental factors with nutrition identified as one of the important determinants of CVD. There is an increasing public interest in and scientific investigation into establishing dietary approaches that can be undertaken for the prevention and treatment of CVD. This Special Issue provides an insight into the influential role of nutrition and dietary habits on cardiovascular health and disease, as well as their mechanisms of therapeutic and preventive action.

**Applications of Non-Pollen Palynomorphs** F. Marret, J. O'Keefe, P. Osterloff, M. Pound, 2021-10-29 This long-awaited book about non-pollen palynomorphs (NPPs) aims to cover gaps in our knowledge of these abundant but understudied palynological remains. NPPs, such as fungal spores, testate amoebae, dinoflagellate cysts, acritarchs and animal remains, are routinely recovered from palynological preparations of marine or terrestrial material, from Proterozoic to recent geological times. This book gives the reader a comprehensive overview of the different types of NPPs, with examples from diverse time periods and environments. It provides guidance on sample preparation to maximize the recovery of these NPPs, detailed information on their diversity and ecological affinity, clarification on the nomenclature and demonstrates their value as environmental indicators. This volume will become the reference guide for any student, academic or practitioner interested in everything else in their palynological preparations.

**Mesenchymal Stem Cell Therapy** Lucas G. Chase, Mohan C Vemuri, 2012-12-12 Over the past decade, significant efforts have been made to develop stem cell-based therapies for difficult to treat diseases. Multipotent mesenchymal stromal cells, also referred to as mesenchymal stem cells (MSCs), appear to hold great promise in regards to a regenerative cell-based therapy for the treatment of these diseases. Currently, more than 200 clinical trials are underway worldwide exploring the use of MSCs for the treatment of a wide range of disorders including bone, cartilage and tendon damage, myocardial infarction, graft-versus-host disease, Crohn's disease, diabetes, multiple sclerosis, critical limb ischemia and many others. MSCs were first identified by Friendstein and colleagues as an adherent stromal cell population within the bone marrow with the ability to form clonogenic colonies in vitro. In regards to the basic biology associated with MSCs, there has been tremendous progress towards understanding this cell population's phenotype and function from a range of tissue sources. Despite enormous progress and an overall increased understanding of MSCs at the molecular and cellular level, several critical questions remain to be answered in regards to the use of these cells in therapeutic applications. Clinically, both autologous and allogenic approaches for the transplantation of MSCs are being explored. Several of the processing steps needed for the clinical application of MSCs, including isolation from various tissues, scalable in vitro expansion, cell banking, dose preparation, quality control parameters, delivery methods and numerous others are being extensively studied. Despite a significant number of ongoing clinical trials, none of the current therapeutic approaches

have, at this point, become a standard of care treatment. Although exceptionally promising, the clinical translation of MSC-based therapies is still a work in progress. The extensive number of ongoing clinical trials is expected to provide a clearer path forward for the realization and implementation of MSCs in regenerative medicine. Towards this end, reviews of current clinical trial results and discussions of relevant topics association with the clinical application of MSCs are compiled in this book from some of the leading researchers in this exciting and rapidly advancing field. Although not absolutely all-inclusive, we hope the chapters within this book can promote and enable a better understanding of the translation of MSCs from bench-to-bedside and inspire researchers to further explore this promising and quickly evolving field.

The New Palgrave Dictionary of Economics and the Law NA NA, 2016-04-30 A great deal of economics is about law - the functioning of markets, property rights and their enforcement, financial obligations, and so forth - yet these legal aspects are almost never addressed in the academic study of economics. Conversely, the study and practice of law entails a significant understanding of economics, yet the drafting and administration of laws often ignore economic principle. The New Palgrave Dictionary of Economics and the Law is uniquely placed by the quality, breadth and depth of its coverage to address this need for building bridges. Drawn from the ranks of academics, professional lawyers, and economists in eight countries, the 340 contributors include world experts in their fields. Among them are Nobel laureates in economics and eminent legal scholars. First published in 1998 and now available in paperback for the first time, The New Palgrave Dictionary of Economics and the Law has established itself as a classic reference work in this important field.

Mechatronics Robert H. Bishop, 2017-12-19 Mechatronics has evolved into a way of life in engineering practice, and it pervades virtually every aspect of the modern world. In chapters drawn from the bestselling and now standard engineering reference, The Mechatronics Handbook, this book introduces the vibrant field of mechatronics and its key elements: physical system modeling; sensors and actuators; signals and systems; computers and logic systems; and software and data acquisition. These chapters, written by

leading academics and practitioners, were carefully selected and organized to provide an accessible, general outline of the subject ideal for non-specialists. **Mechatronics: An Introduction** first defines and organizes the key elements of mechatronics, exploring design approach, system interfacing, instrumentation, control systems, and microprocessor-based controllers and microelectronics. It then surveys physical system modeling, introducing MEMS along with modeling and simulation. Coverage then moves to essential elements of sensors and actuators, including characteristics and fundamentals of time and frequency, followed by control systems and subsystems, computer hardware, logic, system interfaces, communication and computer networking, data acquisition, and computer-based instrumentation systems. Clear explanations and nearly 200 illustrations help bring the subject to life. Providing a broad overview of the fundamental aspects of the field, **Mechatronics: An Introduction** is an ideal primer for those new to the field, a handy review for those already familiar with the technology, and a friendly introduction for anyone who is curious about mechatronics.

**Perspectives in Company Law and Financial Regulation** Michel Tison,Hans De Wulf,Christoph Van der Elst,Reinhard Steennot,2009-06-18 This collection of essays has been compiled in honour of Professor Eddy Wymeersch on the occasion of his retirement as professor at Ghent University. His main international academic peers explore developments on the crossroads of company law and financial regulation in Europe and the United States, providing a unique view on the dynamics of regulatory competition in an era of economic globalisation, whether in the fields of rulemaking, organising the mobility of capital or the enforcement of rules. The deepening of European financial integration and the transatlantic regulatory dialogue has generated new paradigms of rule-setting in a multinational framework and reinforced the need to develop adequate instruments for co-operation between regulators. Regulators increasingly use concepts such as equivalence or mutual recognition to regulate cross-border relations.
