General Aviation Aircraft Design Snorri Gudmundsson, 2013-09-03 Find the right answer the first time with this useful handbook of preliminary aircraft design. Written by an engineer with close to 20 years of design experience, *General Aviation Aircraft Design: Applied Methods and Procedures* provides the practicing engineer with a versatile handbook that serves as the first source for finding answers to realistic aircraft design questions. The book is structured in an equation/derivation/solved example format for easy access to content. Readers will find it a valuable guide to topics such as sizing of horizontal and vertical tails to minimize drag, sizing of lifting surfaces to ensure proper dynamic stability, numerical performance methods, and common faults and fixes in aircraft design. In most cases, numerical examples involve actual aircraft specs. Concepts are visually depicted by a number of useful black-and-white figures, photos, and graphs (with full-color images included in the eBook only). Broad and deep in coverage, it is intended for practicing engineers, aerospace engineering students, mathematically astute

amateur aircraft designers, and anyone interested in aircraft design. Organized by articles and structured in an equation/derivation/solved example format for easy access to the content you need Numerical examples involve actual aircraft specs Contains high-interest topics not found in other texts, including sizing of horizontal and vertical tails to minimize drag, sizing of lifting surfaces to ensure proper dynamic stability, numerical performance methods, and common faults and fixes in aircraft design Provides a unique safety-oriented design checklist based on industry experience Discusses advantages and disadvantages of using computational tools during the design process Features detailed summaries of design options detailing the pros and cons of each aerodynamic solution Includes three case studies showing applications to business jets, general aviation aircraft, and UAVs Numerous high-quality graphics clearly illustrate the book's concepts (note: images are full-color in eBook only)

Unconventional Flying Objects Hill, Paul R., 2014-06-01 Paul Hill was a well-respected NASA scientist when, in the early 1950s, he had a UFO sighting. Soon after, he built the first flying platform and was able to duplicate the UFO's tilt-to-control maneuvers. Official policy, however, prevented him from proclaiming his findings. I was destined, says Hill, to be as unidentified as the flying objects. For the next twenty-five years, Hill acted as an unofficial clearinghouse at NASA, collecting and analyzing sightings' reports for physical properties, propulsion possibilities, dynamics, etc. To refute claims that UFOs defy the laws of physics, he had to make technological sense... of the unconventional object. After his retirement from NASA, Hill finally completed his remarkable analysis. This book, published posthumously, presents his findings that UFOs obey, not defy, the laws of physics. Vindicating his own sighting and thousands of others, he proves that UFO technology is not only explainable, but attainable.

Aircraft Production Technology Douglas F. Horne, 1986-07-31 The aircraft industry is being transformed by the introduction of new techniques in

design, production, and testing. New techniques for forming, bonding and manufacturing with existing materials as well as the development of new materials have made a considerable impact on the industry. After a short historical introduction, this book describes in detail operations and machinery concerned with light alloys, steels, nickel and titanium alloys, metal cutting, welding and brazing, surface and protective treatments, sheet metal working, non-metallic materials, assembly, inspection and testing. A final chapter describes estimating, planning and the role of computer aided design and machining (CAD/CAM).

Dyna-Soar Robert Godwin, 2003 It was a Space Shuttle with a mission - to drop a weapon payload anywhere on Earth and to do so while approaching its target at hypersonic velocity - 18,000 miles per hour. Between 1957 and 1963 the Dyna-Soar program consumed \$430 million of the US taxpayer's money. However, it never flew. Cancelled less than two weeks after President
