Differential Forms in Algebraic Topology Raoul Bott, Loring W. Tu, 2013-04-17 Developed from a first-year graduate course in algebraic topology, this text is an informal introduction to some of the main ideas of contemporary homotopy and cohomology theory. The materials are structured around four core areas: de Rham theory, the Čech-de Rham complex, spectral sequences, and characteristic classes. By using the de Rham theory of differential forms as a prototype of cohomology, the machineries of algebraic topology are made easier to assimilate. With its stress on concreteness, motivation, and readability, this book is equally suitable for self-study and as a one-semester course in topology.

Agile Processes in Software Engineering and Extreme Programming Hubert Baumeister, Horst Lichter, Matthias Riebis, 2017-04-12 This book is open access under a CC BY license. The volume constitutes the proceedings of the 18th International Conference on Agile Software Development, XP 2017, held in Cologne, Germany, in May 2017. The 14 full and 6 short papers presented in this volume were carefully reviewed and selected from 46 submissions. They were organized in topical sections named: improving agile processes; agile in organization; and safety critical software. In addition, the volume contains 3 doctoral symposium papers (from 4 papers submitted).

Finite Fields with Applications to Coding Theory, Cryptography and Related Areas Gary L. Mullen, Henning Stichtenoth, Horacio Tapia-Recillas, 2012-12-06 The Sixth International Conference on Finite Fields and Applications, Fq6, held in the city of Oaxaca, Mexico, from May 21-25, 2001, continued a series of biennial international conferences on finite fields. This volume documents the steadily increasing interest in this topic. Finite fields are an important tool in discrete mathematics and its applications cover algebraic geometry, coding theory, cryptology, design theory, finite geometries, and scientific computation, among others. An important feature is the interplay between theory and applications which has led to many new perspectives in research on finite fields and other areas. This interplay has been emphasized in this series of conferences and certainly was reflected in Fq6. This volume offers up-to-date original research papers by leading experts in the area.

Combinatorial Methods for Chemical and Biological Sensors Radislav A. Potyrailo, Vladimir M. Mirsky, 2009-03-21 Chemical sensors are in high demand for applications as varied as water pollution detection, medical diagnostics, and battlefield air analysis. Designing the next generation of sensors requires an interdisciplinary approach. The book provides a critical analysis of new opportunities in sensor materials research that have been opened up with the use of combinatorial and high-throughput technologies, with emphasis on experimental techniques. For a view of component selection with a more computational perspective, readers may refer to the complementary volume of Integrated Analytical Systems edited by M. Ryan et al., entitled "Computational Methods for Sensor Material Selection".

Ecology of Plants Jessica Gurevitch, Samuel M. Scheiner, Gordon A. Fox, 2006-07-17 Brighter than ever, this text covers a range of topics with the focus on the interactions between plants and their environment over a range of scales. Throughout the book, human environmental influences are discussed as well as the importance of evolutionary and other historical processes for current ecology.

The Role of Biofilms in Device-Related Infections Mark Shirtliff, Jeff G. Leid, 2008-12-19 Approximately 60% of all hospital-associated infections, over one million cases per year, are due to biofilms that have formed on indwelling medical devices. Device-related biofilm infections increase hospital stays and add over one billion dollars/year to U.S. hospitalization costs. Since the use and the types of indwelling medical devices commonly used in modern healthcare are continuously expanding, especially with an aging population, the incidence of biofilm infections will also continue to rise. The central problem with microbial biofilm infections of foreign bodies is their propensity to resist clearance by the host immune system and all antimicrobial agents tested to date. In fact, compared to their free floating, planktonic counterparts, microbes within a biofilm are 50 – 500 times more resistant to antimicrobial agents. Therefore, achieving therapeutic and non-lethal dosing regimens within the human host is impossible. The end result is a conversion from an acute infection to one that is persistent, chronic, and recurrent, most often requiring device removal in order to eliminate the infection. This text will describe the major types of device-related infections, and will explain the host, pathogen, and the unique properties of their interactions in order to gain a better understanding of these recalcitrant infections.

One-Factorizations W.D. Wallis, 1996-12-31 This book has grown out of graduate courses given by the author at Southern Illinois University, Carbondale, as well as a series of seminars delivered at Curtin University of Technology, Western Australia. The book is intended to be used both as a textbook at the graduate level and also as a professional reference. The topic of one-factorizations fits into the theory of combinatorial designs just as much as it does into graph theory. Factors and factorizations occur as building blocks in the theory of designs in a number of places. Our approach owes as much to design theory as it does to graph theory. It is expected that nearly all readers will have some background in the theory of graphs, such as an advanced undergraduate course in Graph Theory or Applied Graph Theory. However, the book is self-contained, and the first two chapters are a thumbnail sketch of basic graph theory. Many readers will merely skim these chapters, observing our notational conventions along the way. (These introductory chapters could, in fact, enable some instructors to use the book for a somewhat eccentric introduction to graph theory.) Chapter 3 introduces one-factors and one-factorizations. The next two chapters outline two major application areas: combinatorial arrays and tournaments. These two related areas have provided the impetus for a good deal of study of one-factorizations.

AU-18 Space Primer Air Command Staff College, 2012-08-01 The US National Space Policy released by the president in 2006 states that the US government should develop space professionals. As an integral part of that endeavor, AU-18, Space Primer, provides to the joint war fighter an unclassified resource for understanding the capabilities, organizations, and operations of space forces. This primer is a useful tool both for individuals who are not space aware-unacquainted with space capabilities, organizations, and operations-and for those who are space aware, especially individuals associated with the space community, but not familiar with space capabilities, organizations, and operations outside their particular areas of expertise. It is your guide and your invitation to all the excitement and opportunity of space. Last published in 1993, this updated version of the Space Primer has

been made possible by combined efforts of the Air Command and Staff College's academic year 2008 Jointspacemindedness and Operational Space research seminars, as well as select members of the academic year 2009 Advanced Space research seminar. Air university Press.

Stratigraphy and Paleolimnology of the Green River Formation, Western USA Michael Elliot Smith, Alan R. Carroll, 2015-07-02 This volume presents a suite of detailed stratigraphic and sedimentologic investigations of the Eocene Green River Formation of Wyoming, Colorado and Utah, one of the world's foremost terrestrial archives of lacustrine and alluvial deposition during the warmest portion of the early Cenozoic. Its twelve chapters encompass the rich and varied record of lacustrine stratigraphy, sedimentology, geochronology, geochemistry and paleontology. Chapters 2-9 provide detailed member-scale synthesis of Green River Formation strata within the Greater Green River, Fossil, Piceance Creek and Uinta Basins, while its final two chapters address its enigmatic evaporite deposits and ichnofossils at broad, interbasinal scale.

Advanced Technology for Design and Fabrication of Composite Materials and Structures George C. Sih, Alberto Carpinteri, G. Surace, 2013-03-09 The last decade has seen a significant growth in the processing and fabrication of advanced composite materials. This volume contains the up-to-date contributions of those with working experience in the automotive, marine, aerospace and construction field. Starting with modern technologies concerned with assessing the change in material microstructure in terms of the processing parameters, methodologies are offered to account for tradeoffs between the fundamental variables such as temperature and pressure that control the product quality. The book contains new ideas and data, not available in the open literature.

Coastal Lagoons Michael J. Kennish, Hans W. Paerl, 2010-06-15 Dynamic and productive ecosystems, coastal lagoons play an important role in local economies and often bear the brunt of coastal development, agricultural, and urban waste, overuse from fisheries, aquaculture, transportation, energy production, and other human activities. The features that make coastal lagoons vital ecosystems underline the importance of sound management strategies for long-term environmental and resource sustainability. Written by an internationally renowned group of contributors, *Coastal Lagoons: Critical Habitats of Environmental Change* examines the function and structure of coastal lagoonal ecosystems and the natural and anthropogenic drivers of change that affect them. The contributors examine the susceptibility of coastal lagoons to eutrophication, the indicators of eutrophic conditions, the influences of natural factors such as major storms, droughts and other climate effects, and the resulting biotic and ecosystem impairments that have developed worldwide. They provide detailed descriptions of the physical-chemical and biotic characteristics of diverse coastal lagoonal ecosystems, and address the environmental factors, forcing features, and stressors affecting hydrologic, biogeochemical, and trophic properties of these important water bodies. They also discuss the innovative tools and approaches used for assessing ecological change in the context of anthropogenically- and climatically-mediated factors. The book investigates the biogeochemical and ecological responses to nutrient enrichment and other pollutants in lagoonal estuaries and compares them to those in other estuarine types. With editors among the most noted international scholars in coastal ecology and contributors who are world-class in their fields, the chapters in this volume represent a wide array of studies on natural and anthropogenic drivers of change in coastal lagoons located in different regions of the world. Although a significant number of journal articles on the subject can be found in the literature, this book provides a single-source reference for coastal lagoons within the arena of the global environment.

Atomistic Simulation of Anisotropic Crystal Structures at Nanoscale Jia Fu, 2019-05-10 Multiscale simulations of atomistic/continuum coupling in computational materials science, where the scale expands from macro-/micro- to nanoscale, has become a hot research topic. These small units, usually nanostructures, are commonly anisotropic. The development of molecular modeling tools to describe and predict the mechanical properties of structures reveals an undeniable practical importance. Typical anisotropic structures (e.g. cubic, hexagonal, monoclinic) using DFT, MD, and atomic finite element methods are especially interesting, according to the modeling requirement of upscaling structures. It therefore connects nanoscale modeling and continuous patterns of deformation behavior by identifying relevant parameters from smaller to larger scales. These methodologies have the prospect of significant applications. I would like to recommend this book to both beginners and experienced researchers.

Specificity of Proteolysis Borivoj Keil, 2012-12-06 *Specificity of Proteolysis* presents a survey and conclusions on the action of proteinases - enzymes which are cleaving proteins or peptides. The specificity of proteinases which is determined as the sequence of amino acids at the cleavage site of a substrate, is an important criteria to choose an enzyme as tool in protein research. Whenever one is looking for an enzyme to act at a defined site or to give defined cleavage products one will find comprehensive information in this work. Comprehensive information about more than 280 endopeptidases which are based on the database LYSIS including a calculation program to determine cleavage sites, is given in the book.

Crime and Social Organization Elin Waring, David Weisburd, 2018-02-06 This tenth volume in the *Advances in Criminological Theory* series is dedicated to the work of Albert J. Reiss, Jr. It focuses on the relationship between crime and social organization that is so central to his work. This focus rejects a view of crime solely as the action of atomistic individuals and sees the criminal justice system as inseparable from its social, political and organizational context. This perspective has had a resurgence in recent years, and this volume brings together some of the most important scholars who have contributed to these developments. Articles examine the social organization of crime itself, the context of crime, and the response to crime. The concept of co-offending, originally developed by Reiss, is explored both as a way of improving understanding of juvenile offending and as a framework for understanding patterns of criminal organization across crime types and the relationship of criminal to licit organization. Other articles recast social disorganization theory in light of recent theoretical and empirical developments. They argue for a version of control theory that incorporates internal, contextual, and state-focused dimensions. Organizational actors, both as offenders and as governmental agencies responding to crime, are explored. Building from Reiss's groundbreaking work on policing, a group of articles on policing examine organizational change through reorganization, the adoption of strategies such as community policing and the increased use of empirical evidence, complicated by routines, organizational culture and political constraints. Taken together, these works develop new connections between dimensions of social organization and renew the social organization perspective on crime and criminal justice. Contributors include: Diane Vaughan, Joan McCord, Kevin P. Conway, Elin Waring, Felton Earls, Beat Mohler, Peter Manning, Stephen Mastrofski, Lawrence Sherman, David Weisburd, Robert Sampson, David F. Greenberg, Margaret Kelley, Robin Tamarelli and Jeremy Travis.

The book provides an introduction to all the clinical topics required by the trainee psychiatrist, including all the sub-specialties and major psychiatric conditions. Throughout, the authors emphasize the basic clinical skills required for the full assessment and understanding of the patient. Discussion of treatment includes not only scientific evidence, but also practical problems in the management of patients their family and social context. The text emphasizes an evidence-based approach to practice and gives full attention to ethical and legal issues. Introductory chapters focus on recognition of signs and symptoms, classification and diagnosis, psychiatric assessment, and aetiology. Further chapters deal with all the the major psychiatric syndromes as well as providing detailed coverage of pharmacological and psychological treatments. The book gives equal prominence to ICD and DSM classification - often with direct comparisons - giving the book a universal appeal. The Shorter Oxford Textbook of Psychiatry remains the most up-to-date secondary level textbook of psychiatry available, with the new edition boasting a new modern design and greater use of summary boxes, tables, and lists than ever before. The extensive bibliography has been brought up-to-date and there are targeted reading lists for each chapter. The Shorter Oxford Textbook of Psychiatry fulfils all the study and revision needs of psychiatric trainees, but will also prove useful to medical students, GPs, qualified psychiatrists, and those in related fields who need to be kept informed with current psychiatric practice.

Universe and Inner Self in Early Indian and Early Greek Thought Seaford Richard Seaford,2016-07-11 From the sixth century BCE onwards there occurred a revolution in thought, with novel ideas such as such as that understanding the inner self is both vital for human well-being and central to understanding the universe. This intellectual transformation is sometimes called the beginning of philosophy. And it occurred - independently it seems - in both India and Greece, but not in the vast Persian Empire that divided them. How was this possible? This is a puzzle that has never been solved. This volume brings together Hellenists and Indologists representing a variety of perspectives on the similarities and differences between the two cultures, and on how to explain them. It offers a collaborative contribution to the burgeoning interest in the Axial Age and will be of interest to anyone intrigued by the big questions inspired by the ancient world.
