Tiger I: German Army Heavy Tank Dennis Oliver, 2019-10-30 The Tiger I tank, probably the most famous German armoured vehicle of the Second World War, might have been a war-winning, break-through weapon if it had been produced in sufficient numbers and if it had been introduced earlier on the Eastern Front, before the balance of strength had tipped towards the Soviet Union. At the Battle of Kursk there were not enough Tigers to make a decisive difference and thereafter the Tiger was forced to play a mainly defensive role as the Wehrmacht struggled to withstand the advances of the Red Army. And it is this period in the Tiger tank's short history that Dennis Oliver concentrates on in this, his third book on the Tiger in the TankCraft series. He uses archive photos and extensively researched colour illustrations to examine the tanks and units of the German army's heavy panzer battalions. A large part of the book showcases available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined providing everything the modeller needs to recreate an accurate representation of the Tigers of 1943.

Tiger Thomas Anderson, 2013-07-20 One of the most feared weapons of World War II, the Tiger tank was a beast of a machine which dominated the battlefields of Europe with its astonishing size, speed and firepower, which continues to fascinate more than 70 years after it was first designed. Revealing its design and development history, Thomas Anderson draws upon original German archival material to tell the story of the birth of the Tiger. He then analyzes its success on the battlefield and the many modifications and variants that also came into play. Illustrated throughout with rare photographs and drawings, this is a unique history of what is easily the most famous tank ever produced.

Pershing vs Tiger Steven J. Zaloga, 2017-09-21 During the final battles on World War II's Western Front, the legendary German Tiger I heavy tank clashed with the brand-new M26 Pershing fielded by the United States. The Tiger I had earned a formidable reputation by the end of 1944, although its non-sloped armour and poor mobility meant it was being superseded by the Tiger II or 'King Tiger'. While the Tiger I had been in the front lines since 1942, the US Pershing first entered combat in late February 1945, and more than 20 Pershings would see action before war's end. This book examines the dramatic Tiger/Pershing duel at Elsdorf in Germany, and also assesses the clashes between German armour and the sole 'Super Pershing' deployed to Europe. Featuring full-colour artwork, carefully chosen photographs and specially commissioned maps, this is the story of the first US heavy tanks in combat with the fearsome Tiger I during the last months of World War II in Europe.

Panzerkampfwagen VI Tiger Slawomir Zajackowski,2019-09-19 The German heavy tank Panzerkampfwagen VI Tiger is a vehicle known even to laymen. It was heavily armored and armed with a deadly 88 mm gun. Despite their legend, the Tigers were plagued by several technical problems, especially with propulsion, which often did not allow them to fully use their combat potential. The main motivator for designing the Pz.Kpfw. VI was eager to install a Flak 36 anti-aircraft gun 36 caliber 88 in the turret. It was a weapon that could destroy Soviet tanks on long distances. In addition, it was necessary to build a tank able to withstand fire from the T-34/76 guns, which effectively eliminated the German medium tanks Pz.Kpfw. III and IV. A competition for a tank that fulfills these requirements was set, and in April 1942 the prototypes of Porsche and Henschel went for the final duel. After a series of tests, the tank developed by Henschel proved to be better. It received the designation Sd.Kfz. 181 Pz.Kpfw. VI Tiger Ausf. H1 and went into production at the plants in Kassel-Mittelfeld and Wegmann AG. The tank was plagued by many teething problems, and as a result, many subsequent construction changes were introduced in the course of production. Considering the periods of their implementation, it is possible to extract Tigers of early production series, vehicles after modification and vehicles of late production series.

Soviet Tank Company Tactics Defense Intelligence Agency,2019-07-25 Soviet Tank Company Tactics, May 1976 We were surprised to find there were no clean copies in print so we decided to reconstitute the report as best we could. Unfortunately, the photos are not very good and the originals are nowhere to be found, so we did not replace them. Rather than change the document, we decided to add a new document at the end that would show current (2019) Russian tanks and include what little information is available. As far as tactics go, not really sure how the new tanks, such as the T-14 will cause changes to Russian tank tactics but some of the information is still valid today, such as the use of snorkel, night vision and the effects of poor weather conditions. You will note that we added some additional information regarding Russian New Generation Warfare (RNGW), 4th Generation Warfare, Hybrid War, and new Russian weapons at the end including: - 1K17 Szhatie (1К17 Звезда) Russian Stiletto Laser Tank - Combat Laser System (Peresvet) Russian Laser Cannon - T-14 Armata Main Battle Tank - T-15 Heavy Infantry Combat Vehicle - Kurganets-25 Light Tracked Armored Vehicle - 2S35 Koalitsiya-SV 152-mm Self-Propelled Howitzer - VPK-7829 Bumerang Modular Infantry Wheeled Fighting Vehicle Why buy a book you can download for free? We print the paperback book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour.

It's much more cost-effective to just order the bound paperback from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these paperbacks as a service so you don't have to. The books are compact, tightly-bound paperback, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a HUBZONE SDVOSB. <https://usgovpub.com>

Super-heavy Tanks of World War II Kenneth W Estes,2014-11-18 This title explores the conception and design of a range of enormous and powerful tanks that came to be designated as 'super-heavy'. The fascinating super-heavy tanks of World War II were heirs to the siege machine tradition - a means of breaking the deadlock of ground combat. As a class of fighting vehicle, they began with the World War I concept of the search for a breakthrough tank, designed to cross enemy lines. It is not surprising that the breakthrough tank projects of the period prior to World War II took place in the armies that suffered the most casualties of the Great War (Russia, France, Germany). All of the principal Axis and Allied nations eventually initiated super-heavy development projects, with increasingly heavy armor and armament. Much as the casualties of World War I prompted the original breakthrough tank developments, as Germany found itself on the defensive, with diminishing operational prospects and an increasingly desperate leadership, so too did its focus turn to the super-heavy tanks that could turn the tide back in their favor. Although only a small number of super-heavy tanks were built, much less saw active service, their impressive appearance and specifications - not to mention the possibilities of what might have been - have captured the interest of AFV enthusiasts, historians and military personnel. This illustrated and detailed study explores and compares these designs in unprecedented depth.

Tiger I Dennis Oliver,2018-04-30 When at Hitler's insistence the first Tiger I tanks went into action in Tunisia in December 1942 they rapidly gained a formidable fighting reputation despite their lack of reliability and the small number deployed. With its heavy armour and 88mm gun, it outclassed all the Allied tanks then in service and forced the Allies to accelerate the introduction of improved anti-tank guns and tanks that could match the Tiger in terms of firepower and protection. In this, his second volume in the TankCraft series on the Tiger, Dennis Oliver uses archive photos and extensively researched color illustrations to examine the Tiger tanks and German army units that first took them into combat in North Africa and then operated them as they fell back through Sicily and Italy between 1943 and 1945. A large part of the book showcases available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined providing everything the modeller needs to recreate an accurate representation of the tanks that made such an immediate impact on the southern front during the Second World War.

Hitler's Heavy Tiger Tank Battalions 1942-1945 Ian Baxter,2020-02 With rare, often unpublished photographs and full captions Hitler's Heavy Tank Battalions provides a superb record of the Wehrmacht's Schwere Panzerabteilung on operations between 1942 and 1945. In addition to the Tiger I and successor Tiger II heavy tanks, these battalions were equipped with Pz.Kpfw III's, Flakpanzer IV, Sd. Kfz 7/1 self-propelled antiaircraft guns, Sd.Kfz 9 and 10 halftracks, Sd.Kfz 2 and Kettenkrad gun tractors. The Tigers required substantial maintenance and the Berge Panther armored recovery vehicle played a key role. Heavy tank battalions saw action on the Eastern Front, in Italy and North West Europe before being pushed back to Berlin for the final defensive battles and there are graphic photographs and descriptions of vehicles on operations in all these theaters. While feared by the Allies in the early years, these units suffered increasing attrition from antitank artillery, ground attack aircraft and mechanical issues. Modelers and equipment buffs in particular will find this latest Images of War book extremely useful and fascinating.

Panzerkampfwagen 38 (t) ,2007-01-01 Panzer Tracts No. 18 - Panzerkampfwagen 38 (t) Ausf.A to G and S, Production, Modification, and Operational History from 1939 to 1942 Now for the first time, we have compiled an accurate record of the features of each Pz.kpfw.38(t) Ausfuehrung. The correct pieces of the puzzle were found through a lot of hard work, research trips to measure and study the survivors, close attention to detail, and help from friends. Over one thousand hours were spent carefully measuring and drawing all the details of surviving Pz.Kpfw.38(t) chassis and turrets to create accurate four-view drawings of the Ausf.B, C, D, E, F, and S and six-view drawings of the Ausf.A and G. Extra efforts were also expended to draw details on the chassis and belly. As is our high standard, Panzer Tracts are based solely on the content of primary source documents. The real value of the Pz.Kpfw.38(t) can be learned by reading the experience reports written by unit commanders close to the time when the actions occurred. This 76 page book is illustrated with 50 drawings and 67 clean/rare photos with captions that correctly identify the external characteristics of each Ausfuehrung.

King Tiger vs IS-2 David R. Higgins,2011-08-23 As a prelude to the post-war concept of a single main battle tank design, vehicles during World War II tended to be categorized as light, medium, and heavy, depending on their use. In this last category, tanks had grown in size, weight, and firepower to counter ever-improving anti-tank weapon systems. This resulted in changes in tactics and doctrine to better integrate heavy armor into a combined arms system. This was especially true on the Eastern Front, where the open terrain promoted armor action and a rapid cycle of improvements. The Soviets were quick to develop vehicles that were able to fight the Tiger I on an equal footing by late 1943, such as the up-gunned T-34/85 and the self-propelled

ISU-152s. Because the American T-26/M-26 Pershing arrived late in the war, and the British Centurion not at all, only the Soviet IS-2 serves as an example of a heavy design that was fielded in large battlefield numbers. The Soviet drive to cut off enemy forces in East Prussia during Operation Solstice (February 1945) is a prime example of this conflict. The Germans, had limited resources, and were strategically on the defensive, but enjoyed ever-shorter logistic distances as they retreated, and fought in an environment and terrain that played to the strengths of the technically-superior King Tiger. The IS-2 was lighter, more maneuverable, and far more numerous, and used these assets to its advantage. This battle, fought in the closing months of the war, depicts the classic late-war contrast between the military doctrines of Germany and the Soviet Union.

Tiger I & Tiger II Anthony Tucker-Jones,2013-07-17 A pictorial history and analysis of the infamous World War II German tanks. The German Tiger I and Tiger II (known to the Allies as the King Tiger or Royal Tiger) were the most famous and formidable heavy tanks of the Second World War. In their day, their awesome reputation inspired such apprehension among Allied soldiers that the weaknesses of these brilliant but flawed designs tended to be overlooked. Anthony Tucker-Jones, in this illustrated history, tells the story of their conception and development and reconsiders their operational history, and he dispels the myths that have grown up around them. The Tigers were over-engineered, required raw materials that were in short supply, and were time-consuming to manufacture and difficult to recover from the battlefield. Only around 1,300 of the Tiger I and fewer than 500 of the Tiger II were produced, so they were never going to make anything more than a local impact on the outcome of the fighting on the Western and Eastern fronts. Yet the myth of the Tigers, with their 88mm guns, thick armor, and brutal profiles, has grown over time to the extent that they are regarded as the deadliest tanks of the Second World War. Anthony Tucker-Jones’s expert account of these remarkable fighting vehicles is accompanied by a series of color plates showing the main variants of the designs and the common ancillary equipment and unit markings. His book is an essential work of reference for enthusiasts.
