Military Drones Matthew Allan Chandler, 2017-01-01 Military drones have been part of wars for more than 100 years. Today's military unmanned aerial vehicles are packed with sensors, high-quality cameras, and even weapons. With each UAV flight, military members are kept safe away from war zones. In this e-book young readers will learn how both aerial and underwater military drones operate and get inside details about some of the missions they've completed.

Predator Drones Denny Von Finn, 2011-08-01 Predator drones can be used for reconnaissance missions or targeted attacks. Pilots control the drones from remote locations, keeping them safe from enemy fire. These unmanned aerial vehicles are an invaluable part of the United States Air Force. Readers will learn the parts and missions of predator drones and how pilots are able to control them from thousands of miles away.

Predator Richard Whittle, 2014-09-16 Documents the lesser-known origin story of the Predator drone, describing the unusual individuals who shaped its innovation, the considerable resistance that hampered its development and the ways in which it has transformed modern warfare. By the author of *The Dream Machine*.

Drones and the Future of Air Warfare Michael P. Kreuzer, 2016-05-26 This book examines the evolution of airpower and specifically the growth and proliferation of Remotely Piloted Aircraft (RPAs). While most existing literature examines either the law or ethics of RPAs, and some newer scholarship looks to the battlefield effectiveness (the gains from strikes versus the potential for 'blowback, etc.), this work investigates it from a broader military perspective. It examines the strategy for employment of RPAs across the spectrum of warfare, the potential deterrent value of RPAs in some circumstances, and the resulting ability of RPAs to fundamentally shift the character of when and how wars are fought. The central aim of this book is to evaluate the role of 'drones' in warfare to date, and make basic projections on how states will adopt RPAs and UAVs in the future. At the core is the goal of answering a broad, underlying research question: How will the RPA innovation impact military strategy and international security? This book will be of much interest to students of airpower, drone warfare, military and strategic studies, security studies and IR.

Drones Ryan Nagelhout, 2013-01-01 Movies and TV shows have been predicting the rise of robot intelligence for years. In 2012, the US government finally revealed that the day is here. Militaries around the world have been experimenting with drones since World War I. Today, US forces have thousands of drones ready for surveillance and attack. From tiny UGVs to the huge SolarEagle UAV developed in part by Boeing, readers are introduced to the fascinating science and history of drones in the military. Vivid photographs and engaging sidebars add to the detailed information and important ethical questions surrounding drone research. Young engineers and future spies alike will keep turning the pages, captivated by the secrecy and intrigue of these military machines.

Predators Brian Glyn Williams, 2013 *Predators* is a riveting introduction to the murky world of Predator and Reaper drones, the CIA's and U.S. military's most effective and controversial killing tools. Brian Glyn Williams combines policy analysis with the human drama of the spies, terrorists, insurgents, and innocent tribal peoples who have been killed in the covert operation—the CIA's largest assassination campaign since the Vietnam War—being waged in Pakistan's tribal regions via remote control aircraft known as drones, or unmanned aerial vehicles. Having traveled extensively in the Pashtun tribal areas while working for the U.S. military and the CIA, Williams explores in detail of the new technology of airborne assassinations. From miniature Scorpion missiles designed to kill terrorists while avoiding civilian collateral damage to prairie fires, the cigarette lightersize homing beacons spies plant on their unsuspecting targets to direct drone missiles to them, the author describes the drone arsenal in full. Evaluating the ethics of targeted killings and drone technology, Williams covers more than a hundred drone strikes, analyzing the number of slain civilians versus the number of terrorists killed to address the claims of antidrone activists. In examining the future of drone warfare, he reveals that the U.S. military is already building more unmanned than manned aerial vehicles. *Predators* helps us weigh the pros and cons of the drone program so that we can decide whether it is a vital strategic asset, a frenemy, or a little of both.

Drones Martin J Dougherty, 2015-09-17 From drones the size of a fingertip to drones that can carry soldiers, from rotorcraft to submersible drones, this book expertly examines these complex autonomous vehicles.

New Generation Vehicles Craig Boutland, 2019-08 Describes the various new generation vehicles that western nations are using in the war on terrorism--

Unmanned Aerial Systems John David Blom, 2010 Manned aerial reconnaissance, from the balloons of WWI to the helicopters of Vietnam, solidified the tactical need for Army Aviation which remained relatively unchanged until 1990. Significant changes have since occurred on the battlefield with the advent of the modern day, unmanned flight and its technological abilities. From its humble beginnings of the suggested use of a toy aircraft kit, to the development and use in today's warfare in Iraq and Afghanistan, the unmanned aerial vehicle (UAV) possesses a deep history. Understanding this past may provide clues into where this technology may be going, and what problems could lie ahead.

Reliability Study:

Reliability is at the core of achieving routine airspace access, reducing acquisition cost, and improving mission effectiveness for UAVs. Although it has taken the fleet 17 years to reach the 100,000 flight hour milestone, this study is the first comprehensive effort to address formally the reliability issue for these increasingly utilized military assets. The results presented are based primarily on actual flight operations data and augmented by in-house reliability assessments performed by individual UAV programs and contractors. Military, U. S. Army, Department of Defense, 2017-08-19 This is the Army's keystone doctrine for how to fight and sustain Army Unmanned Aircraft Systems (UAS). Chapter 1 focuses on UAS organizations, missions, and fundamentals. Chapter 2 provides an overview of Army UAS and system descriptions and capabilities. Chapter 3 provides an overview of joint UAS and the capabilities they give the maneuver commander. Chapter 4 discusses UAS planning considerations all users must be familiar with for the successful execution of UAS operations. Chapter 5 discusses employment of the UAS. Chapter 6 discusses sustainment requirements and considerations for UAS operations at all echelons. UAS operations support battlefield commanders and their staffs as they plan, coordinate, and execute operations. UAS increase the situational awareness (SA) of commanders through intelligence, surveillance, and reconnaissance (ISR). Chapter 1 *

Predator Drones Jack David, 2011-01-01 Predator drones use cameras and sensors to help the United States Air Force gain valuable information about the enemy. They can also be used for strategic strikes. Readers will find out how predator drones work, what kinds of missions they are sent out to perform, and how a pilot thousands of miles away can safely control one.

Unmanned Aerial Vehicles David Glade, 2000 The development of uninhabited aerial vehicles (UAVs) could potentially revolutionize how military force is used in the future. While the early operational experiences with UAVs show great promise, their full range of capabilities is largely unknown. However, it is clear that these technologies will enable military forces to use aerospace power more efficiently, which means at lower cost and with less risk to the humans who pilot aircraft. The broader question is the wisdom of using unmanned aerial vehicles for employing lethal force, and in particular which air power missions are best accomplished by uninhabited, piloted, and autonomous vehicles. The corollary is to examine the essential roles of human pilots or operators in aerospace operations in the twenty-first century. Since it is common to draw distinctions between vehicles with an on-board pilot, vehicles with off-board operators, and autonomous vehicles, this study explores the essential role of pilots and contrasts it with the roles of remotely piloted and autonomous vehicles. The assumption is that piloted, remotely piloted, and autonomous vehicles have advantages and disadvantages in military operations, and that these vary in strategic significance for different levels of conflict. Since it is essential for the U.S. defense establishment to consider the strategic and technological implications of these types of aerial vehicles, this study is devoted to addressing the issues raised by the new generation of aerial vehicles.

Defense Science Board Study Office of the Under Secretary of Defense, 2014-08-04 Lessons from recent combat experiences in Kosovo, Afghanistan and Iraq have shown that UAVs can provide vastly improved acquisition and more rapid dissemination of Intelligence, Surveillance and Reconnaissance (ISR) data. They are one of the principal contributors to successful outcomes for the United States, in these campaigns. The benefits and promise offered by UAVs in surveillance, targeting and attack have captured the attention of senior military and civilian officials in the Defense Department (DoD), members of Congress, and the public alike. Indeed, these recent combat operations appear to indicate that unmanned air systems have at last come of age. There is no longer any question of the technical viability and operational utility of UAVs. The success of UAVs in recent conflicts represents a historic opportunity to exploit the transformational capabilities inherent in UAVs/Uninhabited Combat Aerial Vehicles (UCAVs). Transformation is not a term, it is a philosophy. Transformation is a predisposition to exploring adaptations of existing and new systems, doctrine and organizations. True transformation is not the result of a one-time improvement, but of sustained and determined effort. For example, the American forces used multiple Predator UAVs during Operation Iraqi Freedom (OIF) to provide a far more comprehensive operational perspective across the theater to the Combined Air Operations Center by integrating the Predator common operating picture with the Falcon View mission planning system. There is now another mission imperative and that is distance. During this review the new concept of Global Persistence Surveillance has specifically focused on the contributions of UAVs and UCAVs. During OIF Predator UAVs also enabled time-critical targeting via streaming video to strike platforms. Likewise one Global Hawk in the Iraqi theater from 8 March 03 to 23 April 03 accounted for 55% of the Time Sensitive Targets generated to kill air defense equipment. In 16 missions, Global Hawk located 13 Surface-to-Air Missile (SAM) batteries, 50 SAM launchers, over 70 SAM transport vehicles and over 300 tanks. Notwithstanding the success of UAVs in OIF, UAVs have not been fully embedded in current Concepts of Operations (CONOPS) or valued with effects driven methodology. Future UAV programs must be conceived with this mix in mind, i.e. predefined operational concepts and effects driven methodology. UAVs are ideal systems to support the emerging joint character and the asymmetric nature of warfare. The Task Force feels it is time for DoD and the Services to move forward and make UAVs and UCAVs an integral part of the force structure, not an additional asset. To do so requires appropriate planning, appropriate budgeting, and continued management attention of DoD and Service leadership. The DoD and the Services have

already started to integrate UAVs into their force structure plans. Currently there are UAV plans and roadmaps within the DoD and Services and the FY 04 budget also shows substantial increases in funding of UAV programs. While progress has been made in planning and funding for UAVs, the Services need to move from deconfliction to integration to interdependence. UAV capabilities should be assessed in the larger context of the Global Persistent Surveillance. UAVs can ideally complement current architectures for Future Imagery Architecture, New Imagery System, and Space Based Radar. This study identifies steps the Department of Defense and Armed Services can take to field a robust UAV and UCAV capability. The recommendations in his executive summary indicate the Task Force's top level recommendations. Additional recommendations can be found in the body of the report. The Task Force's findings and recommendations fall into eight subject areas and are described in this executive summary in order of importance.

Kill Chain Andrew Cockburn, 2015-08-01 Surveillance, technology, war, and the failed US policy of remote killing Kill Chain is the essential history of drone warfare, a development in military technology that, as Andrew Cockburn demonstrates, has its origins in long-buried secret programmes dating to US military interventions in Vietnam and Yugoslavia. Cockburn follows the links in a chain that stretches from the White House, through the drone command center in Nevada, to the skies of Helmand Province. The book reveals the powerful interests—military, CIA and corporate—that turned the Pentagon away from manned aircraft and boots on the ground to killing by remote control. Cockburn uncovers the technological breakthroughs, the revolution in military philosophy, and the devastating collateral damage resulting from assassinations allegedly targeted with pinpoint precision. Vivid, powerful and chilling, Kill Chain draws on sources deep in the military and intelligence establishment to lay bare the failure of the modern American way of war.

The Predator ACTD Michael R. Thirtle, Robert V. Johnson, J. L. Birkler, United States. Department of Defense. Office of the Secretary of Defense, 1997 In this analysis, we closely detail the Predator Advanced Concept Technology Demonstration (ACTD) and also document the important demonstration and transition issues from the project that can be applied to other ACTDs.

The Predator ACTD; A Case Study for Transition Planning to the Formal Acquisition Process Michael Thirtle, Rand corp santa monica ca, 1997 In July 1995, a new endurance unmanned aerial vehicle (UAV) flew over Bosnia to surveil and provide all-weather reconnaissance and image-gathering in an operational (i.e., conflict) environment. Representing a new capability for the Department of Defense (DoD), this UAV represented, above all, a departure from DoD's usual way of doing acquisition business. The study documented in this report was completed in support of RAND research on Advanced Concept Technology Demonstration (ACTD) programs for the Office of the Secretary of Defense. The effort was conducted from July until December 1996 and documents research on the Medium Altitude Endurance (MAE) Unmanned Aerial Vehicle ACTD program, also known as the Predator UAV. Specifically, RAND was tasked to examine two questions: (1) what were the overarching lessons learned from the Predator ACTD? and (2) Which lessons can be generalized and applied to other ACTD programs? In this analysis, we closely detail the Predator ACTD and also document the important demonstration and transition issues from the project that can be applied to other ACTDs. The intent of this work is to improve the ACTD process and the transition of ACTDs to formal acquisition programs. This report should be of interest to those involved in acquisition, program offices, and ACTD programs.
