A Geek in Korea Daniel Tudor, 2014-09-09 For every fan of K-Pop music, Korean Wave dramas and Kimchi—or anyone intrigued by Korea and Korean culture—*A Geek in Korea* is a hip, new guide to the land of the Samsung smartphone and Gangnam Style. Author Dan Tudor first arrived in Korea on the eve of the 2002 World Cup when

South Korea played Italy in the finals. What he saw inspired him to return and work in Korea. He served as The Economist magazine's Korea correspondent for three years, and he writes regular columns for the national daily Joongang Ilbo newspaper. Along the way, he has developed a great love and admiration for Korean culture and the Korean people. A Geek in Korea reinvents the culture guide for the Internet age. Packed with articles and photographs, it covers all the touchstones of Korean culture—from Buddhism and Confucianism to chapters on the traditional arts and disciplines like Taekwondo. There are chapters on cultural code words and norms; personal relationships; business and technology; and symbols and practices that are peculiarly Korean. A number of chapters are devoted to Korean pop culture, with attention to the stars, idols, and urban subcultures associated with them. For visitors to Korea, the author includes a mini-guide to his favorite neighborhoods in Seoul and other places of outstanding interest. Spotlighting the originality and creativity of the Koreans, debunking myths about them, and answering nagging questions like why they're so obsessed with education and success—Tudor has created the perfect book for the growing ranks of Koreaphiles in this inspired, insightful, and highly informative guide.

Books I–III Ludger Hovestadt, 2022-12-19 *Treatise on digital architecture* Hovestadt's treatise strictly follows the model of the

famous treatises by Vitruvius (De architectura) and Alberti (De re aedificatoria), based on the supposition that we find ourselves in a comparable situation today. Vitruvius and Alberti expressed the meaning of architecture in their eras: Roman antiquity and the Renaissance. Hovestadt has done the same for the present day, incorporating considerations of physics, mathematics, technology, literature, and philosophy. Books I to III deal with the role of the architect and the objectivity of architecture. Books IV to VI address the modalities of speaking about and encoding architecture: the secret, the public, and the private. Books VII to X are dedicated to actual digital mechanisms: artificial intelligence, natural communication, gnomonics, and cultural heritage. An architectural treatise for our age in 10 books Inspired by the works of Vitruvius and Alberti Published in three volumes in the Applied Virtuality Book Series

Linux in a Nutshell Ellen Siever,Aaron Weber,Stephen Figgins,Robert Love,Arnold Robbins,2005 Over the last few years, Linux has grown both as an operating system and a tool for personal and business use. Simultaneously becoming more user friendly and more powerful as a back-end system, Linux has achieved new plateaus: the newer filesystems have solidified, new commands and tools have appeared and become standard, and the desktop--including new desktop environments--have proved to be viable, stable, and readily accessible to even those who don't consider themselves computer gurus. Whether you're using Linux for personal software projects, for a small office or home office (often termed the SOHO environment), to provide services to a small group of colleagues, or to administer a site responsible for millions of email and web connections each day, you need quick access to information on a wide range of tools. This book covers all aspects of administering and making effective use of Linux systems. Among its topics are booting, package

management, and revision control. But foremost in Linux in a Nutshell are the utilities and commands that make Linux one of the most powerful and flexible systems available. Now in its fifth edition, Linux in a Nutshell brings users up-to-date with the current state of Linux. Considered by many to be the most complete and authoritative command reference for Linux available, the book covers all substantial user, programming, administration, and networking commands for the most common Linux distributions. Comprehensive but concise, the fifth edition has been updated to cover new features of major Linux distributions. Configuration information for the rapidly growing commercial network services and community update services is one of the subjects covered for the first time. But that's just the beginning. The book covers editors, shells, and LILO and GRUB boot options. There's also coverage of Apache, Samba, Postfix, sendmail, CVS, Subversion, Emacs, vi, sed, gawk, and much more. Everything that system administrators, developers, and power users need to know about Linux is referenced here, and they will turn to this book again and again.

Visual proficiency - A perspective on art education Kunibert Bering, Rolf Niehoff, 2015-12-18 Every day, over a million images are uploaded to flickr. This is a striking example of the so-called »flood« of images that emerged with the beginning of the digital age. A generation of adolescents has already been socialised with this flood of images and deals with it on a daily basis, both in their networks and elsewhere. Art education thus faces significant challenges: art is the only school subject that deals with the problems inherent in images as images, making them the focus of pedagogic activity. This volume presents both the foundations for engaging with the phenomenon of the »image« in a competent and historically informed manner as well as the perspectives for art education that arise from these foundations. It is based upon the conviction that providing orientation in a world defined by images does not mean following solely a technocratic, functionalist or even neoliberal »concept of education«. Quite the contrary: »providing an orientation« for how to deal with images in a world that is dominated by them is a crucial part of the holistic development of young people's personalities. The volume's main focus lies upon the new functions taken on both by the image and by art

more generally. It takes into account aspects of globalisation and participation and also includes more unusual views (often from a cross-media perspective) of art and its historical repertory, which even current image creation is unable to dispense with. The volume also deals extensively with architecture and the images it conveys.
