Mathematical Foundations of Image Processing and Analysis

Jean-Charles Pinoli, 2014-07-22 Mathematical Imaging is currently a rapidly growing field in applied mathematics, with an increasing need for theoretical mathematics. This book, the second of two volumes, emphasizes the role of mathematics as a rigorous basis for imaging sciences. It provides a comprehensive and convenient overview of the key mathematical concepts, notions, tools and frameworks involved in the various fields of gray-tone and binary image processing and analysis, by proposing a large, but coherent, set of symbols and notations, a complete list of subjects and a detailed bibliography. It establishes a bridge between the pure and applied mathematical disciplines, and the processing and analysis of gray-tone and binary images. It is accessible to readers who have neither extensive mathematical training, nor peer knowledge in Image Processing and Analysis. It is a self-contained book focusing on the mathematical notions, concepts, operations, structures, and frameworks that are beyond or involved in Image Processing and Analysis. The notations are simplified as far as possible in order to be more explicative and consistent throughout the book and the mathematical aspects are systematically discussed in the image processing and analysis context, through practical examples or concrete illustrations. Conversely, the discussed applicative issues allow the role of mathematics to be highlighted. Written for a broad audience – students, mathematicians, image processing and analysis specialists, as well as other scientists and practitioners – the author hopes that readers will find their own way of using the book, thus providing a mathematical companion that can help mathematicians become more familiar with image processing and analysis, and likewise, image processing and image analysis scientists, researchers and engineers gain a deeper understanding of mathematical notions and concepts.

New Trends in Disruptive Technologies, Tech Ethics and Artificial Intelligence Daniel H. de la Iglesia, Juan F. de Paz Santana, Alfonso J. López Rivero, 2022-08-27 This book provides a forum for experts to present their latest research in disruptive technologies, promoting knowledge transfer. Due to the important advances in technologies such as artificial intelligence, big data, the Internet of things, or bioinformatics produced in recent years, it is necessary to conduct a thorough review of current ethical patterns. One of the research fields that is in full expansion and with a broad future is technology ethics or tech ethics. Just a few years ago, this type of research was a small part, and they did not have too many technology researchers involved. At present, due to the explosion of new applications of artificial intelligence, their problems and their legal barriers have flourished innumerable initiatives, declarations, principles, guides, and analyses focused on measuring the social impact of these systems and on the development of a more ethical technology. It is, therefore, a problem that needs to be addressed from an academic and multidisciplinary point of view, where experts in ethics and behavior work together with experts in new and disruptive technologies. The international conference “Disruptive Technologies Tech Ethics and Artificial Intelligence” (DITTET 2022) provides a forum to present and discuss the latest scientific and technical advances and their implications in the field of ethics. It provides a unique opportunity to bring together experts in different fields, academics, and professionals to exchange their experience in the development and deployment of disruptive technologies, artificial intelligence, and their ethical problems.

A Global Church History Steven D. Cone,Robert F. Rea,2019-09-05 How did the Christian Church originate, what journeys has it taken over two millennia, and how did it come to exist in its present, myriad forms? The answers to these questions form a tapestry of history that reaches from first century Palestine to the ends of the earth. This volume tells this rich story from an ecumenical perspective, drawing on both Eastern and Western historic sources in exploring the rise of Eastern Orthodoxy; the church across Asia, Africa, and the Americas; and the reformations of the Western Church; including the diversity of contemporary voices. The work benefits from many pedagogical features: - boxed text sections identifying central figures and points of debate - study questions for each chapter - chapter summaries - maps --charts --index Supplemented by over 400 illustrations, this book embraces the universality of historic and current Christianity, creating a single and comprehensive volume for students of Church history and systematic theology.

Visual Domain Adaptation in the Deep Learning Era Gabriela Csurka,Timothy M. Hospedales,Mathieu Salzmann,Tatiana Tommasi,2022-06-06 Solving problems with deep neural networks typically relies on massive amounts of labeled training data to achieve high performance. While in many situations huge volumes of unlabeled data can be and often are generated and available, the cost of acquiring data labels remains high. Transfer learning (TL), and in particular domain adaptation (DA), has emerged as an effective solution to overcome the burden of annotation, exploiting the unlabeled data available from the target domain together with labeled data or pre-trained models from similar, yet different source domains. The aim of this book is to provide an overview of such DA/TL methods applied to computer vision, a

field whose popularity has increased significantly in the last few years. We set the stage by revisiting the theoretical background and some of the historical shallow methods before discussing and comparing different domain adaptation strategies that exploit deep architectures for visual recognition. We introduce the space of self-training-based methods that draw inspiration from the related fields of deep semi-supervised and self-supervised learning in solving the deep domain adaptation. Going beyond the classic domain adaptation problem, we then explore the rich space of problem settings that arise when applying domain adaptation in practice such as partial or open-set DA, where source and target data categories do not fully overlap, continuous DA where the target data comes as a stream, and so on. We next consider the least restrictive setting of domain generalization (DG), as an extreme case where neither labeled nor unlabeled target data are available during training. Finally, we close by considering the emerging area of learning-to-learn and how it can be applied to further improve existing approaches to cross domain learning problems such as DA and DG.

Illustrated Lexicon of Germanic Deities Gunivortus Goos, 2022-10-26 This lexicon of Germanic deities fills a gap in its branch. It introduces goddesses and gods of Germanic peoples in the form of a lexicon. These are names of deities in inscriptions from Roman times, as well as deities from mostly medieval literary works from Iceland and Scandinavia, and goddesses and gods that are mentioned only in sources of later times, where the gathered collection of folk tales from the Renaissance on plays an important role. The quality of these sources varies greatly, all have their shortcomings and leave many questions unanswered. Regardless, this lexicon tries to explain all this as good as possible ... unambiguously and critically. The longer introductory chapter plays a central role in classifying and evaluating the provided information.

Fighter, Worker, and Family Man Sebastian Huebel, 2021-12-02 When the Nazis came to power, they used various strategies to expel German Jews from social, cultural, and economic life. *Fighter, Worker, and Family Man* focuses on the gendered experiences and discrimination that German-Jewish men faced between 1933 and 1941. Sebastian Huebel argues that Jewish men's gender identities, intersecting with categories of

ethnicity, race, class, and age, underwent a profound process of marginalization that destabilized accustomed ways of performing masculinity. At the same time, in their attempts to sustain their conceptions of masculinity these men maintained agency and developed coping strategies that prevented their full-scale emasculation. Huebel draws on a rich archive of diaries, letters, and autobiographies to interpret the experiences of these men, focusing on their roles as soldiers and protectors, professionals and breadwinners, and parents and husbands. *Fighter, Worker, and Family Man* sheds light on how the Nazis sought to emasculate Jewish men through propaganda, the law, and violence, and how in turn German-Jewish men were able to defy emasculation and adapt – at least temporarily – to their marginalized status as men.
