Creating and Contesting Carolina Michelle LeMaster,Bradford J.

Wood,2013-11-01 The essays in *Creating and Contesting Carolina* shed new light on how the various peoples of the Carolinas responded to the tumultuous changes shaping the geographic space that the British called Carolina during the Proprietary period (1663–1719). In doing so, the essays focus attention on some of the most important and dramatic watersheds in the history of British colonization in the New World. These years brought challenging and dramatic changes to the region, such as the violent warfare between British and Native Americans or British and Spanish, the no-less dramatic development of the plantation system, and the decline of proprietary authority. All involved contestation, whether through violence or debate. The very idea of a place called Carolina was challenged by Native Americans, and many colonists and metropolitan authorities differed in their visions for Carolina. The stakes were high in these contests because they occurred in an early American world often characterized by brutal warfare, rigid hierarchies, enslavement, cultural dislocation, and transoceanic struggles for power. While Native Americans and colonists shed each other's blood to define the territory on their terms, colonists and officials built their own version of Carolina on paper and in the discourse of early modern empires. But new tensions also provided a powerful incentive for political and economic creativity. The peoples of the early Carolinas reimagined places, reconceptualized cultures, realigned their loyalties, and adapted in a wide variety of ways to the New World. Three major groups of peoples—European colonists, Native Americans, and enslaved Africans—shared these experiences of change in the Carolinas, but their histories have usually been written separately. These disparate but closely related strands of scholarship must be connected to make the early Carolinas intelligible. *Creating and Contesting Carolina* brings together work relating to all three groups in this unique collection.

A Geek in Korea Daniel Tudor,2014-09-09 For every fan of K-Pop music, Korean Wave dramas and Kimchi—or anyone intrigued by Korea and Korean culture—*A Geek in Korea* is a hip, new guide to the land of the Samsung smartphone and Gangnam Style. Author Dan Tudor first arrived in Korea on the eve of the 2002 World Cup when South Korea played Italy in the finals. What he saw inspired him to return and work in Korea. He served as *The Economist* magazine's Korea correspondent for three years, and he writes regular columns for the national daily JoongAng Ilbo newspaper. Along the way, he has developed a great love and admiration for Korean culture and the Korean people. *A Geek in Korea* reinvents the culture guide for the Internet age. Packed with articles and photographs, it covers all the touchstones of Korean culture—from Buddhism and Confucianism to chapters on the traditional arts and disciplines like Taekwondo. There are chapters on cultural code words and norms; personal relationships; business and technology; and symbols and practices that are peculiarly Korean. A number of chapters are devoted to Korean pop culture, with attention to the stars, idols, and urban subcultures associated with them. For visitors to Korea, the author includes a mini-guide to his favorite neighborhoods in Seoul and other places of outstanding interest. Spotlighting the originality and creativity of the Koreans, debunking myths about them, and answering nagging questions like why they're so obsessed with education and success—Tudor has created the perfect book for the growing ranks of Koreaphiles in this inspired, insightful, and highly informative guide.

Reinforced Concrete Beams, Columns and Frames Jostein Hellesland, Noël Challamel, Charles Casandjian, Christophe Lanos, 2013-02-13 This book is focused on the theoretical and practical design of reinforced concrete beams, columns and frame structures. It is based on an analytical approach of designing normal reinforced concrete structural elements that are compatible with most international design rules, including for instance the European design rules – Eurocode 2 – for reinforced concrete structures. The book tries to distinguish between what belongs to the structural design philosophy of such structural elements (related to strength of materials arguments) and what belongs to the design rule aspects associated with specific characteristic data (for the material or loading parameters). A previous book, entitled Reinforced Concrete Beams, Columns and Frames – Mechanics and Design, deals with the fundamental aspects of the mechanics and design of reinforced concrete in general, both related to the Serviceability Limit State (SLS) and the Ultimate Limit State (ULS), whereas the current book deals with more advanced ULS aspects, along with instability and second-order analysis

aspects. Some recent research results including the use of non-local mechanics are also presented. This book is aimed at Masters-level students, engineers, researchers and teachers in the field of reinforced concrete design. Most of the books in this area are very practical or code-oriented, whereas this book is more theoretically based, using rigorous mathematics and mechanics tools. Contents 1. Advanced Design at Ultimate Limit State (ULS). 2. Slender Compression Members – Mechanics and Design. 3. Approximate Analysis Methods. Appendix 1. Cardano's Method. Appendix 2. Steel Reinforcement Table. About the Authors Jostein Hellesland has been Professor of Structural Mechanics at the University of Oslo, Norway since January 1988. His contribution to the field of stability has been recognized and magnified by many high-quality papers in famous international journals such as Engineering Structures, Thin-Walled Structures, Journal of Constructional Steel Research and Journal of Structural Engineering. Noël Challamel is Professor in Civil Engineering at UBS, University of South Brittany in France and chairman of the EMI-ASCE Stability committee. His contributions mainly concern the dynamics, stability and inelastic behavior of structural components, with special emphasis on Continuum Damage Mechanics (more than 70 publications in International peer-reviewed journals). Charles Casandjian was formerly Associate Professor at INSA (French National Institute of Applied Sciences), Rennes, France and the chairman of the course on reinforced concrete design. He has published work on the mechanics of concrete and is also involved in creating a web experience for teaching reinforced concrete design – BA-CORTEX. Christophe Lanos is Professor in Civil Engineering at the University of Rennes 1 in France. He has mainly published work on the mechanics of concrete, as well as other related subjects. He is also involved in creating a web experience for teaching reinforced concrete design – BA-CORTEX.

Integral and Measure Vigirdas Mackevicius, 2014-09-10 This book is devoted to integration, one of the two main operations in calculus. In Part 1, the definition of the integral of a one-variable function is different (not essentially, but rather methodically) from traditional definitions of Riemann or Lebesgue integrals. Such an approach allows us, on the one hand, to quickly develop the practical skills of integration as well as, on the other hand, in Part 2, to pass naturally to the more general Lebesgue integral. Based on the latter, in Part 2, the author develops a theory of integration for functions of several variables. In Part 3, within the same methodological scheme, the author presents the elements of theory of integration in an abstract space equipped with a measure; we cannot do without this in functional analysis, probability theory, etc. The majority of chapters are complemented with problems, mostly of the theoretical type. The book is mainly devoted to students of mathematics and related specialities. However, Part 1 can be successfully used by any student as a simple introduction to integration calculus.
