A Prehistory of South America Jerry D. Moore, 2014-07-09 A Prehistory of South America is an overview of the ancient and historic native cultures of the entire continent of South America based on the most recent archaeological investigations. This accessible, clearly written text is designed to engage undergraduate and beginning graduate students in anthropology. For more than 12,000 years, South American cultures ranged from mobile hunters and gatherers to rulers and residents of colossal cities. In the process, native South American societies made advancements in agriculture and economic systems and created great works of art—in pottery, textiles, precious metals, and stone—that still awe the modern eye. Organized in broad chronological periods, A Prehistory of South America explores these diverse human achievements, emphasizing the many adaptations of peoples from a continent-wide perspective. Moore examines the archaeologies of societies across South America, from the arid deserts of the Pacific coast and the frigid Andean highlands to the humid lowlands of the Amazon Basin and the fjords of Patagonia and beyond. Illustrated in full color and suitable for an educated general reader interested in the Precolumbian peoples of South America, A Prehistory of South America is a long overdue addition to the literature on

South American archaeology.

Atlas of Fantastic Infrastructures An Mihe, 2016-04-25 The Atlas of Fantastic infrastructures deals with the characterization of architecture, media and digital infrastructure. In concrete terms, it deals with the materiality of buildings and the intangibility of data. While technical or functional studies often tend to flatten the multiplex phenomena, the author speculatively propose four abstract prisms: 1) AFFAIR WITH PHANTOMS – who do we want to meet in a digitally mediated space, and what kind of conversation/activity will we have?; 2) PARA-DESIRE – where do our surreal desires live, and what are their strategies?; 3) MEDIATED SPACE CATALOGUE – what kinds of data, information, things, spaces and places are available in the world, and how our activities blend them?; 4) GIFTS OF THE GARDENS – how can an idea enter physical reality, and what are the pathways of such becomings? The author examines buildings and projects by Toyo Ito, Philippe

Rahm, Olafur Eliasson, Greg Lynn, MVRDV, Electroland, Troika, NOX, Rafael Lozano-Hemmer and others.

Model of the Universe Bobby McGehee, 2010-02 This Model of the Universe concludes the universe to be a spherical region within a much larger region of primordial matter. Primordial Matter is determined to be an endless array of positroniums; matter (+) and antimatter (-) particles, stabilized in and by an equally spaced (.6 cm) hexahedron arrangement. When positron + and electron - particles come in contact they annihilate into photons; when photon concentrations become adequate, they precipitate into corporeal matter of the universe. The initial annihilation started a chain reaction from a single + & - pair which upset the positronium rotation synchronization. Photons from annihilations propagate in all directions and produce more continuing chain reaction annihilations. Outward flowing photon concentrations coalesce and precipitate into subatomic particles. Accretions of particles produce the objects and matter of the universe. The continuing process is called the deflagration wave, because a simple understandable analogy relates to a flame propagating through dry grass: matter is not created nor destroyed; it is only converted from one form of matter into

another. All processes in this Model have been proven, and verified; all are consistent with the Laws of Physics.
