Reliability of Engineering Systems and Technological Risk Vladimir Rykov, 2016-08-16 This book is based on a lecture course to students specializing in the safety of technological processes and production. The author focuses on three main problems in technological risks and safety: elements of reliability theory, the basic notions, models and methods of general risk theory and some aspects of insurance in the context of risk management. Although the material in this book is aimed at those working towards a bachelor's degree in engineering, it may also be of interest to postgraduate students and specialists dealing with

problems related to reliability and risks.

Graphene and Carbon Nanotubes Ermin Malic, Andreas Knorr, 2013-04-12 A first on ultrafast phenomena in carbon nanostructures like graphene, the most promising candidate for revolutionizing information technology and communication The book introduces the reader into the ultrafast nanoworld of graphene and carbon nanotubes, including their microscopic tracks and unique optical finger prints. The author reviews the recent progress in this field by combining theoretical and experimental achievements. He offers a clear theoretical foundation by presenting transparently derived equations. Recent experimental breakthroughs are reviewed. By combining both theory and experiment as well as main results and detailed theoretical derivations, the book turns into an inevitable source for a wider audience from graduate students to researchers in physics, materials science, and electrical engineering who work on optoelectronic devices, renewable energies, or in the semiconductor industry.

Multiple social studies topics are included for grades K-3, 4-8, and 9-12. This resource includes engaging digital resources and is aligned to College and Career Readiness and other state standards.

Handbook of Pre-Modern Nordic Memory Studies Jürg Glauser, Pernille Hermann, Stephen A. Mitchell, 2018-11-19 In recent years, the field of Memory Studies has emerged as a key approach in the Humanities and Social Sciences, and has increasingly shown its ability to open new windows on Nordic Studies as well. The entries in this book document the work-to-date of this approach on

the pre-modern Nordic world (mainly the Viking Age and the Middle Ages, but including as well both earlier and later periods). Given that Memory Studies is an ever expanding critical strategy, the approximately eighty contributors in this volume also discuss the potential for future research in this area. Topics covered range from texts to performance to visual and other aspects of material culture, all approached from within an interdisciplinary framework. International specialists, coming from such relevant fields as archaeology, mythology, history of religion, folklore, history, law, art, literature, philology, language, and mediality, offer assessments on the relevance of Memory Studies to their disciplines and show it at work in case studies. Finally, this handbook demonstrates the various levels of culture where memory had a critical impact in the pre-modern North and how deeply embedded the role of memory is in the material itself.

Numerical Methods in Contact Mechanics Vladislav A.

Yastrebov, 2013-02-13 Computational contact mechanics is a broad topic which brings together algorithmic, geometrical, optimization and numerical aspects for a robust, fast and accurate treatment of contact problems. This book covers all the basic ingredients of contact and computational contact mechanics: from efficient contact detection algorithms and classical optimization methods to new developments in contact kinematics and resolution schemes for both sequential and parallel computer architectures. The book is self-contained and intended for people working on the implementation and improvement of contact algorithms in a finite element software. Using a new tensor algebra, the authors introduce some original notions in contact kinematics and extend the classical formulation of contact elements. Some classical and new resolution methods for contact problems and associated ready-to-implement expressions are provided. Contents: 1. Introduction to Computational Contact. 2. Geometry in Contact Mechanics. 3. Contact Detection. 4. Formulation of Contact Problems. 5. Numerical Procedures. 6. Numerical Examples. About the Authors Vladislav A. Yastrebov is a postdoctoral fellow in Computational Solid Mechanics at MINES ParisTech in France. His work in computational contact mechanics was recognized by the CSMA award and by the Prix Paul Caseau of the French Academy of Technology and Electricité de France.

White Coat Tales Robert B. Taylor, 2016-04-18 This new edition of *White Coat Tales* presents intriguing stories that give historical context to what we do in medicine today—the body’s “holy bone” and how it got its name, a surprising reason why gout seemed to be so prevalent several centuries ago, and the therapeutic

misadventure that shortened the life of Eleanor Roosevelt. In addition to many new tales, this revised edition contains 128 illustrations, such as images of Baron von Münchhausen aloft with cannonballs and Vincent van Gogh's portrait of his doctor showing a clue to the painter's health. Read about legendary medical innovators, diseases that changed history, illnesses of famous persons, and some epic blunders of physicians and scientists. The author is Robert B. Taylor, MD, Emeritus Professor, Oregon Health & Science University School of Medicine, and Professor, Eastern Virginia Medical School. Dr. Taylor is the author and editor of more than 33 medical books. To see Dr. Taylor lecture on the history of medicine, go here: <https://youtu.be/Zx4yaUyaPRA>

American-Type Options Dmitrii S. Silvestrov, 2015-03-03 The book gives a systematical presentation of stochastic approximation methods for discrete time Markov price processes. Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes. The principal novelty of presented results is based on consideration of multivariate modulated Markov price processes and general pay-off functions, which can depend not only on price but also an additional stochastic modulating index component, and use of minimal conditions of smoothness for transition probabilities and pay-off functions, compactness conditions for log-price processes and rate of growth conditions for pay-off functions. The volume presents results on structural studies of optimal stopping domains, Monte Carlo based approximation reward algorithms, and convergence of American-type options for autoregressive and continuous time models, as well as results of the corresponding experimental studies.

Bassman Family Genealogy M. Goldstein et. al.,2013-01-10 Researching Barak Bassman's maternal and paternal ancestors takes us back nearly 300 years to small villages in Poland and in the Russian Empire, where these men and women struggled to eke out a living, to live a Jewish life, and to endure the perils of anti-Semitism. Later we track the family's emigration to the "Golden Land" of America, as well as the horrible deaths of those who remained in Europe and perished in the Holocaust. A close look into some family members' archival documents from America reveals the tragic consequences of the abject poverty in which they lived. Yet throughout, our research of Barak Bassman's ancestors has documented their tenacity to survive and make a better life for their children and future generations.

AI And Machine Learning In Pharmaceuticals Dr. K. ILANGO,Dr. P. VALENTINA,2022-11-08 Artificial intelligence (AI) and machine learning (ML) have emerged over the last decade as the cutting-edge technologies most expected to revolutionise the pharmaceutical R&D industry. Revolutionary developments in computer technology and the concomitant evaporation of earlier limits on the collection/processing of enormous amounts of data

are contributing factors. Meanwhile, the price of developing and delivering new medicines to the market for patients has skyrocketed. Despite these challenges, the pharmaceutical sector is interested in AI/ML methods because of their predictivity, automation, and the efficiency boost that is projected as a result. Over the last 15–20 years, ML techniques have been increasingly used in the drug development process. Clinical trial design, conduct, and analysis are the most recent areas of drug research to see beneficial disruption from AI/ML. Due to the rising dependence on digital technology in the execution of clinical trials, the COVID-19 pandemic could further drive the employment of AI/ML in clinical trials. Getting through the associated buzzwords and noise is crucial as we progress toward a future where AI/ML is more integrated into R&D. Similarly crucial is the acknowledgement that the scientific method is still relevant for concluding evidence. By doing so, we can better evaluate the potential benefits of AI/ML in the pharmaceutical industry and make well-informed decisions on the best use. The purpose of this paper is to clarify important ideas, provide examples of their application, and provide a well-rounded perspective on how to best use AI/ML techniques in research and development.

Geometry - Intuition and Concepts Jost-Hinrich

Eschenburg, 2022-10-31 This book deals with the geometry of visual space in all its aspects. As in any branch of mathematics, the aim is to trace the hidden to the obvious; the peculiarity of geometry is that the obvious is sometimes literally before one's eyes. Starting from intuition, spatial concepts are embedded in the pre-existing mathematical framework of linear algebra and calculus. The path from visualization to mathematically exact language is itself the learning content of this book. This is intended to close an often lamented gap in understanding between descriptive preschool and school geometry and the abstract concepts of linear algebra and calculus. At the same time, descriptive geometric modes of argumentation are justified

because their embedding in the strict mathematical language has been clarified. The concepts of geometry are of a very different nature; they denote, so to speak, different layers of geometric thinking: some arguments use only concepts such as point, straight line, and incidence, others require angles and distances, still others symmetry considerations. Each of these conceptual fields determines a separate subfield of geometry and a separate chapter of this book, with the exception of the last-mentioned conceptual field symmetry, which runs through all the others: - Incidence: Projective geometry - Parallelism: Affine geometry - Angle: Conformal Geometry - Distance: Metric Geometry - Curvature: Differential Geometry - Angle as distance measure: Spherical and Hyperbolic Geometry - Symmetry: Mapping Geometry. The mathematical experience acquired in the visual space can be easily transferred to much more abstract situations with the help of the vector space notion. The generalizations beyond the visual dimension point in two directions: Extension of the number concept and transcending the three illustrative dimensions. This book is a translation of the original German 1st edition *Geometrie – Anschauung und Begriffe* by Jost-Hinrich Eschenburg, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Modules on Developing Life Skills of Four to Five Year Old Children Using Digital Stories and Activities Priscilla Angelique Pegollo, MAEd, 2022-03-18 The concept of the modules is based on the author's observations in the early education system that is failing to deliver the outcomes needed to advance the young learner's social skills and development. This scenario will, later on, affect the education opportunities in the future which will contribute to the country's economic growth. Thus, the successful performance in preschool needs to be supported by life skills and values which should be fostered by our education systems. Teaching life skills with hands-on activities is a bit behind because most of the preschool curriculum are merely focused on academics in preparation for Grade 1. The modules are designed to help teachers, parents, school, and education in general to teach life skills through digital storytelling and facilitate hands-on and digital activities in virtual learning. The format of the modules' activities is anchored on the play-based and learner-centered teaching method to immerse the preschool students in fun, meaningful learning experiences. After the discussion, students will perform the oral activity to practice how they express their thoughts and feelings or insights about the lesson. The hands-on activity and games will be the students' application of the lesson they learned.
