Apollo's Eye Denis Cosgrove,2003-10-17 This award-winning science history explores our evolving image of the globe—and how it has shifted our relationship to the world. Long before we had the ability to photograph the earth from space—to see our planet as it would be seen by the Greek god Apollo—images of the earth as a globe had captured popular imagination. In *Apollo's Eye*, geographer Denis Cosgrove examines the historical implications for the West of conceiving and representing the earth as a globe: a unified, spherical body. Cosgrove traces how ideas of globalism and globalization have shifted historically in relation to changing images of the earth, from antiquity to the Space Age. He connects the evolving image of a unified globe to politically powerful conceptions of human unity. Winner of the Association of American Publishers Professional and Scholarly Publishing Award in Geography & Earth Sciences

**Future Biotechnology Research on the International Space Station** National Research Council,Commission on Physical Sciences, Mathematics, and Applications,Space Studies Board,Task Group for the Evaluation of NASA's Biotechnology Facility for the International Space Station,2000-04-14 Under current NASA plans, investigations in the area of biotechnology will be a significant component of the life sciences research to be conducted on the International Space Station (ISS). They encompass work on cell science and studies of the use of microgravity to grow high-quality protein crystals. Both these subdisciplines are advancing rapidly in terrestrial laboratories, fueled by federal and industrial research budgets that dwarf those of NASA's life science program. Forging strong and fruitful connections between the space investigations and laboratory-bench biologists, a continual challenge for NASA's life sciences program, is thus of great importance to ensuring the excellence of ISS research. This report evaluates the plan for NASA's biotechnology facility on the ISS and the scientific context that surrounds it, and makes recommendations on how the facility can be made more effective. In addition to questions about optimizing the instrumentation, the report addresses strategies for enhancing the scientific impact and improving the outreach to mainstream terrestrial biology. No major redirection of effort is called for, but collectively the specific, targeted changes recommended by the task group would have a major effect on the conduct of biotechnology research in space.

*Web Programming with HTML5, CSS, and JavaScript* John Dean,2018-01-09 *Web Programming with HTML5, CSS, and JavaScript* is written for the undergraduate, client-side web programming course. It covers the three client-side technologies (HTML5, CSS, and JavaScript) in depth, with no dependence on server-side technologies.

**XML Bible** Elliott Rusty Harold,2001-10-15 This fast-paced and thorough tutorial/reference contains everything an experienced web developer needs to put XML to work on established or new web sites. XML Bible, Gold Edition covers the fundamentals of the XML language, with emphasis on the creation of XML pages and their publication on the Web; the integration of XML with HTML, databases, and scripting languages to build complex applications. This book also covers Cascading Style Sheets and XSL Transformation; and supplemental technologies such as XLinks and XPointers.

**Advanced SharePoint Services Solutions** Scot P. Hillier,2006-11-01 \*Practical examples can be used immediately. \*Hands-on exercises. \*Short, task-based procedures for solving common problems.

**Beloved** Toni Morrison,2006-10-17 Winner of the Pulitzer Prize, Toni Morrison's *Beloved* is a spellbinding and dazzlingly innovative portrait of a woman haunted by the past. Sethe was born a slave and escaped to Ohio, but eighteen years later she is still not free. She has borne the unthinkable and not gone mad, yet she is still held captive by memories of Sweet Home, the beautiful farm where so many hideous things happened. Meanwhile Sethe's house has long been troubled by the angry, destructive ghost of her baby, who died nameless and whose tombstone is engraved with a single word: *Beloved*. Sethe works at beating back the past, but it makes itself heard and felt incessantly in her memory and in the lives of those around her. When a mysterious teenage girl arrives, calling herself *Beloved*, Sethe's terrible secret explodes into the present. Combining the visionary power of legend with the unassailable truth of history, Morrison's unforgettable novel is one of the great and enduring works of American literature.

*The Case For Mars* Robert Zubrin,2012-12-11 Since the beginning of human history Mars has been an alluring dream; the stuff of legends, gods, and mystery. The planet most like ours, it has still been thought impossible to reach, let alone explore and inhabit. Now with the advent of a revolutionary new plan, all this has changed. Leading space exploration authority Robert Zubrin has crafted a daring new blueprint, *Mars Direct*, presented here with illustrations, photographs, and engaging anecdotes. The Case for Mars is not a vision for the far future or one that will cost us impossible billions. It explains step-by-step how we can use present-day technology to send humans to Mars within ten years; actually produce fuel and oxygen on the planet's surface with Martian natural resources; how we can build bases and settlements; and how we can one day terraform Mars; a process that can alter the atmosphere of planets and pave the way for sustainable life.

**U.S.-European Collaboration in Space Science** European Science Foundation,National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Commission on Physical Sciences, Mathematics, and Applications,European Space Science Committee,Committee on International Space Programs,1998-07-26 U.S.-European Collaboration in Space Science reviews the past 30 years of space-based research across the Atlantic. The book, which was prepared jointly with the European Space Science Committee (under the aegis of the European Science Foundation) begins with a broad survey of the historical and political context of U.S.-European cooperation and collaboration in space. The focus of the book is a set of 13 U.S.-European missions in astrophysics, space physics, planetary sciences, earth sciences, and life and microgravity research that illustrate lessons learned on the evolution of the cooperation, mission planning and scheduling, international agreements, cost-sharing, management, and scientific output. These lessons form the basis of the joint committee's findings and recommendations, which serve to improve the future conduct and enhance the scientific output of U.S.-European cooperation and collaboration in space science.

**Destination Mars** Rod Pyle,2012-04-24 In the next decade, NASA, by itself and in collaboration with the European Space Agency, is planning a minimum of four separate missions to Mars. Clearly, exciting times are ahead for Mars exploration. This is an insider's look into the amazing projects now being developed here and abroad to visit the legendary red planet. Drawing on his contacts at NASA and the Jet Propulsion Laboratory, the author provides stunning insights into the history of Mars exploration and the difficulties and dangers of traveling there. After an entertaining survey of the human fascination with Mars over the centuries, the author offers an introduction to the geography, geology, and water processes of the planet. He then briefly describes the many successful missions by NASA and others to that distant world. But failure and frustration also get their due. As the author makes clear, going to Mars is not, and never will be, easy. Later in the book, he describes in detail what each upcoming mission will involve. In the second half of the book, he offers the reader a glimpse inside the world of Earth-based Mars analogs, places on Earth where scientists are conducting research in hostile environments that are eerily Martian. Finally, he constructs a probable scenario of a crewed expedition to Mars, so that readers can see how earlier robotic missions and human Earth simulations will fit together. All this is punctuated by numerous firsthand interviews with some of the finest Mars explorers of our day, including Stephen Squyres (*Mars Exploration Rover*), Bruce Murray (former director of the Jet Propulsion Laboratory), and Peter Smith (chief of the Mars Phoenix Lander and the upcoming OSIRIS-REx missions). These stellar individuals give us an insider's view of the difficulties and rewards of roaming the red planet. The author's infectious enthusiasm and firsthand knowledge of the international space industry combine to make a uniquely appealing and accessible book about Mars.

Living Among Giants Michael Carroll,2014-10-27 The outer Solar System is rich in resources and may be the best region in which to search for life beyond Earth. In fact, it may ultimately be the best place for Earthlings to set up permanent abodes. This book surveys the feasibility of that prospect, covering the fascinating history of exploration that kicks off our adventure into the outer Solar System. Although other books provide surveys of the outer planets, Carroll approaches it from the perspective of potential future human exploration, exploitation and settlement, using insights from today's leading scientists in the field. These experts take us to targets such as the moons Titan, Triton, Enceladus, Iapetus and Europa, and within the atmospheres of the gas and ice giants. In these pages you will experience the thrill of discovery awaiting those who journey through the giant worlds and their moons. All the latest research is included, as are numerous illustrations, among them original paintings by the author, a renowned prize-

winning space artist.

The Essential Guide to HTML5 and CSS3 Web Design Craig Grannell,Victor Sumner,Dionysios Synodinos,2012-09-07 The Essential Guide to HTML5 and CSS3 Web Design has been fully revised from its critically acclaimed first edition, and updated to include all of the new features and best practices of HTML5 and CSS3. This book reveals all you'll need to design great web sites that are standards-compliant, usable, and aesthetically pleasing, but it won't overwhelm you with waffle, theory, or obscure details! You will find The Essential Guide to HTML5 and CSS3 Web Design invaluable at any stage of your career, with its mixture of practical tutorials and reference material. Beginners will quickly pick up the basics, while more experienced web designers and developers will keep returning to the book again and again to read up on techniques they may not have used for a while, or to look up properties, attributes and other details. This book is destined to become a close friend, adopting a permanent place on your desk. The Essential Guide to HTML5 and CSS3 Web Design starts off with a brief introduction to the web and web design, before diving straight in to HTML5 and CSS3 basics, reusing code, and other best practices you can adopt. The book then focuses on the most important areas of a successful web site: typography, images, navigation, tables, layouts, forms and feedback (including ready-made PHP scripts) and browser quirks, hacks and bugs. The Essential Guide to HTML5 and CSS3 Web Design is completely up-to-date, covering support of the newest standards in all the latest browsers, including IE 9 and Firefox 4. The last chapter of the book provides several case studies to dissect and learn from, including all the most popular web site archetypes—a blog, a store front, a corporate home page, and an online gallery. You'll also appreciate several detailed reference appendices covering CSS, HTML, color references, entities, and more—any details you need to look up will be close at hand.

**The Mars Project** Wernher Von Braun,1953 This classic on space travel was first published in 1953, when interplanetary space flight was considered science fiction by most of those who considered it at all. Here the German-born scientist Wernher von Braun detailed what he believed were the problems and possibilities inherent in a projected expedition to Mars. Today von Braun is recognized as the person most responsible for laying the groundwork for public acceptance of America's space program. When President Bush directed NASA in 1989 to prepare plans for an orbiting space station, lunar research bases, and human exploration of Mars, he was largely echoing what von Braun proposed in The Mars Project.

The New Negro Alain Locke,1925

The Strait of Magellan Michael A. Morris,1989-07-27 After an introductory chapter concerning the definition of 'Straits used for international navigation', the author examines in detail the evolution of the question in the years prior to the convening of UNCLOS-III, during the preparatory works of the Sea-Bed Committee & throughout the Conference. The second part of the book studies the legal norms set up by the 1982 UN Convention on the Law of the Sea concerning the regime of transit passage for maritime & air navigation applicable in most of the straits used for international navigation & the regime of innocent passage residually applied in the other straits. In the final chapter, the author makes a critical appraisal of the new regimes of navigation & overflight in straits, exposes the implications of such regimes in Spain, analyzes the applicability of the Convention's regulations before their coming into force, & examines the practice followed in the last few years by the most important States which favoured or opposed the regime of transit passage. From his position as Deputy-Head of the Spanish Delegation to the Law of the Sea Conference, Ambassador de Yturriaga participated from the very beginning in the work of UNCLOS-III & was an active protagonist in the debates of the straits' question. The book offers a first hand testimony of the straits' negotiation, which will be extremely useful for scholars & students of the Law of the Sea.

**Aggie in Space** Rachel Thompson,2020-05-30 In this third Aggie Piper story, Aggie is just 18 and in danger, the deep state wants her head and her alien space fleet. But Aggie's self-aware mother ship won't leave local space until Mother has an Earthling crew. Aggie must go back to Earth, find crew members, and avoid being killed while the moon breaks apart as the alien city located there makes ready to leave before American's impending attack. Aggie is stranded on Earth and must get away before it's too late. American's empire is failing, a revolution has begun, and Aggie must decide to stay on dying Earth or escape into space leaving all she knew behind. Time is short and Aggie must finally become an adult and make the biggest decision of her life which will affect Earth's future and human kind's survival.
