*Lost in a Good Game* Pete Etchells,2019-04-04 'Etchells writes eloquently ... A heartfelt defence of a demonised pastime' The Times 'Once in an age, a piece of culture comes along that feels like it was specifically created for you, the beats and words and ideas are there because it is your life the creator is describing. Lost In A Good Game is exactly that. It will touch your heart and mind. And even if Bowser, Chun-li or Q-Bert weren't crucial parts of your youth, this is a flawless victory for everyone' Adam Rutherford When Pete Etchells was 14, his father died from motor neurone disease. In order to cope, he immersed himself in a virtual world - first as an escape, but later to try to understand what had happened. Etchells is now a researcher into the psychological effects of video games, and was co-author on a recent paper explaining why WHO plans to classify 'game addiction' as a danger to public health are based on bad science and (he thinks) are a bad idea. In this, his first book, he journeys through the history and development of video games - from Turing's chess machine to mass multiplayer online games like World of Warcraft- via scientific study, to investigate the highs and lows of playing and get to the bottom of our relationship with games - why we do it, and what they really mean to us. At the same time, Lost in a Good Game is a very unusual memoir of a writer coming to terms with his grief via virtual worlds, as he tries to work out what area of popular culture we should classify games (a relatively new technology) under.

*Foundations of Data Science* Avrim Blum,John Hopcroft,Ravindran Kannan,2020-01-23 This book provides an introduction to the mathematical and algorithmic foundations of data science, including machine learning, high-dimensional geometry, and analysis of large networks. random walks and Markov chains, the fundamentals of and important algorithms for machine learning, algorithms and analysis for clustering, probabilistic models for large networks, representation learning including topic modelling and non-negative matrix factorization, wavelets and compressed sensing. Important probabilistic techniques are developed including the law of large numbers, tail inequalities, analysis of random projections, generalization guarantees in machine learning, and moment methods for analysis of phase transitions in large random graphs. Additionally, important structural and complexity measures are discussed such as matrix norms and VC-dimension. This book is suitable for both undergraduate and graduate courses in the design and analysis of algorithms for data.

**Unicity of Meromorphic Mappings** Pei-Chu Hu, Ping Li, Chung-Chun

Yang, 2013-04-18 For a given meromorphic function  $I(z)$  and an arbitrary value  $a$ , Nevanlinna's value distribution theory, which can be derived from the well known Poisson-Jensen formula, deals with relationships between the growth of the function and quantitative estimations of the roots of the equation:  $I(z) - a = 0$ . In the 1920s as an application of the celebrated Nevanlinna's value distribution theory of meromorphic functions, R. Nevanlinna [188] himself proved that for two nonconstant meromorphic functions  $I, g$  and five distinctive values  $a_i$  ( $i = 1, 2, 3, 4, 5$ ) in the extended plane, if  $I - a_i = g - l(a_i)$   $1M$  (ignoring multiplicities) for  $i = 1, 2, 3, 4, 5$ , then  $I = g$ . Furthermore, if  $I - a_i = g - l(a_i)$   $CM$  (counting multiplicities) for  $i = 1, 2, 3$  and  $4$ , then  $I = L(g)$ , where  $L$  denotes a suitable Möbius transformation. Then in the 1970s, F. Gross and C. C. Yang started to study the similar but more general questions of two functions that share sets of values. For instance, they proved that if  $I$  and  $g$  are two nonconstant entire functions and  $S, T$  and  $U$  are three distinctive finite sets such that  $I - s = g - l(s)$   $CM$  for  $s \in S$ , then  $I = g$ .
