**The John Deere Story** Neil Dahlstrom,Jeremy Dahlstrom,2005 Today, John Deere is remembered-some say mistakenly-as the inventor of the steel plow. Who was this legendary man and how did he create the internationally renowned company that still bears his name? He began as a debt-stricken blacksmith who, fleeing debt in New England in the 1830s, set up shop in a little town on the Illinois frontier. There, in response to farmers' struggles, he designed a new plow that cut through the impervious prairie sod and lay open the rich, heavy soil for planting. The demand for his polished steel plow convinced him to specialize in farm implements. In the decades before the Civil War, John Deere envisioned a company supplying midwestern farmers with reliable, affordable equipment. He used only high quality, imported steel and resisted pressure to raise prices. At the same time, he won respectful affection from his employees by working alongside them on the shop floor. Upon taking the helm in the 1860s, John's only surviving son, Charles, expanded the Moline factories to increase production, started branch houses in major midwestern cities to speed distribution, and began to transform the company into a modern corporation. The transformation didn't come without difficulties however: Charles found himself battling the Grange, facing threats of labor unions and strikes led by his own employees, and enduring patent suits and blatant thefts of product designs and advertising.

*Have Dog, Will Travel* Stephen Kuusisto,2019-03-19 In a lyrical love letter to guide dogs everywhere, a blind poet shares his delightful story of how a guide dog changed his life and helped him discover a newfound appreciation for travel and independence. Stephen Kuusisto was born legally blind—but he was also raised in the 1950s and taught to deny his blindness in order to pass as sighted. Stephen attended public school, rode a bike, and read books pressed right up against his nose. As an adult, he coped with his limited vision by becoming a professor in a small college town, memorizing routes for all of the places he needed to be. Then, at the age of thirty-eight, he was laid off. With no other job opportunities in his vicinity, he would have to travel to find work. This is how he found himself at Guiding Eyes, paired with a Labrador named Corky. In this vivid and lyrical memoir, Stephen Kuusisto recounts how an incredible partnership with a guide dog changed his life and the heart-stopping, wondrous adventure that began for him in midlife. Profound and deeply moving, this is a spiritual journey, the story of discovering that life with a guide dog is both a method and a state of mind.

*John Deere's Steel Plow* Edward C. Kendall,2021-04-25 In 1837 John Deere invented the steel plow that could be used in the sticky, root-filled soil of the prairie. Deere's creation succeeded because, as the durable steel share of the plow cut through the heavy earth, the damp mud could find no place to stick on its polished surfaces. This work will make a fun read for people interested in learning about less discussed innovations.

Pain Psychology for Clinicians Leanne R. Cianfrini,Elizabeth J. Richardson,Daniel Doleys,2021 Pain Psychology for Clinicians equips the general medical provider with core psychological and communication strategies to implement in their care of patients with chronic pain. Given the opioid crisis and its intersection with adequate chronic pain management, there is increasing focus to assist the patient with self-management of their pain through the use of interdisciplinary modalities. However, despite the evidence base for efficacy, pain psychology remains largely relegated to formal interdisciplinary outpatient programs or referral-based private practice settings that may not be locally available in a provider's community. This book will present how to briefly and effectively incorporate key concepts from Cognitive-Behavioral Therapy (CBT), Acceptance and Commitment Therapy (ACT), Motivational Interviewing (MI) and other orientations into any health care setting in order to lessen the frustration of both the patient and provider. Dialogues and vignettes will demonstrate how the provider can use these strategies to foster positive clinical outcomes in difficult contexts, such as patients who are non-compliant or avoidant, over-reliant on the physician, misusing opioids, depressed or suicidal, angry, or anxious. With the use of these strategies, the provider will garner confidence and enhance the overall atmosphere of clinical practice when assisting patients with chronic pain--

*Fruit and Vegetable Processing* Wim Jongen,2002-08-13 Fruit and vegetables are both major food products in their own right and key ingredients in many processed foods. There has been growing research on their importance to health and techniques to preserve the nutritional and sensory qualities desired by consumers. This major collection summarises some of the key themes in this recent research. Part one looks at fruit, vegetables and health. There are chapters on the health benefits of increased fruit and vegetable consumption, antioxidants and improving the nutritional quality of processed fruits. Part two considers ways of managing safety and quality through the supply chain. A number of chapters discuss the production of fresh fruit and vegetables, looking at modelling, the use of HACCP systems and ways of maintaining postharvest quality. There are also two chapters on instrumentation for measuring quality. Two final chapters look at maintaining the safety and quality of processed fruit and vegetables. Part three reviews technologies to improve fruit and vegetable products. Two chapters consider how to extend the shelf-life of fruits and vegetables during cultivation. The following three chapters then consider how postharvest handling can improve quality, covering minimal processing, new modified atmosphere packaging techniques and the use of edible coatings. Two final chapters discuss two major recent technologies in processing fruit and vegetables: high pressure processing and the use of vacuum technology. With its distinguished editor and international team of contributors, *Fruit and vegetable processing* provides an authoritative review of key research on measuring and improving the quality of both fresh and processed fruits and vegetables. Reviews recent research on improving the sensory, nutritional and functional qualities of fruit and vegetables, whether as fresh or processed products Examines the importance of fruits and vegetables in processed foods and outlines techniques to preserve the nutritional and sensory qualities desired by
