Supramolecular Chemistry of Biomimetic Systems Junbai Li, 2017-10-10 This book investigates the latest developments in supramolecular assembly systems for mimicking biological structures and functions. Consisting of 14 chapters, it covers various assembly systems, such as polysaccharides, peptides, proteins, biopolymers, natural materials and various hybrid systems. Further, it focuses on different types of supramolecular systems with particular functions or structures that are relevant to living systems. A number of modern techniques used to study the supramolecular systems, such as total internal reflection fluorescence microscopy (TIRFM) and two-photon confocal microscopy, are also introduced in detail. Unlike conventional books on supramolecular assemblies, this book highlights the functions of the assembly systems, particularly their biological applications. As such, it offers a valuable resource for experienced researchers, as well as graduate students working in the field of supramolecular chemistry and biomimetic systems.

Chitooligosaccharides Se-Kwon Kim, 2022-02-23 This book outlines the production of chitooligosaccharides and their derivatives and discusses their main biological activities, biomedical applications and their role in disease prevention. Chitooligosaccharides are products of chitosan or chitin degradation, prepared by enzymatic or chemical hydrolysis of chitosan, and they consist mainly of N-acetyl glucosamine and glucosamine bonded with a glycosidic bond. Compared to chitin and chitosan, chitooligosaccharides offer advantages for large-scale and commercial applications due to their solubility in water and lower molecular weight. Written by leading experts, this book is divided into four parts. The first part provides a general introduction to chitooligosaccharides. The second part focuses on the bioproduction of chitooligosaccharides through enzymatic synthesis and also covers physical and chemical methods of synthesis. The third part explores the major biological activities of chitooligosaccharides, including antioxidant, antimicrobial, anti-allergic, anti-inflammatory, anti-cancer and neuroprotective activities, and discusses the disease preventing mechanisms of chitooligosaccharides. In this section, readers will also find about the latest in vivo studies which support the use of chitooligosaccharides in the prevention and control of disease. The final part highlights important biomedical applications of chitooligosaccharides, including in tissue engineering, drug delivery and wound healing applications. It also includes the volume editor's perspective on the health and safety risks of chitooligosaccharides. Given its scope, this book is useful not only for researches in the field but also for students interested in biomaterials, pharmaceuticals, marine biotechnology, nutraceuticals and food science.

Contemporary Appliqué Julia Triston, Rachel Lombard, 2015-04-16 Appliqué is a classic embroidery technique that has recently been experiencing a revival. Appearing in the most cutting-edge contemporary textile work, it can be interpreted in many different ways – layering, patching, applying, overlaying – and offers endless creative possibilities. Each technical variation of appliqué has traditionally had its own set boundaries, but nowadays all the rules are being broken and the technique has become relevant, up-to-date and suitable for all varieties of textile art. This impressive book takes a fresh look at the world of appliqué and surface embellishment, showing you how to develop distinctive and individual designs, create exciting

compositions and use unusual combinations of materials. It covers the traditional variations, including bonded appliqué, broderie perse, cut-away appliqué and Mola work, and explains how the standard techniques can be developed to give exciting results in your own textile work, in both hand and machine embroidery. Accompanying the techniques is a wealth of examples of contemporary appliqué to inspire you. The authors are renowned for their thoughtful, creative but practical approach to teaching textiles, making this book suitable for beginners and established textile artists alike.

Women Poets in the Victorian Era Fabienne Moine,2016-03-09 Examining the place of nature in Victorian women's poetry, Fabienne Moine explores the work of canonical and long-neglected women poets to show the myriad connections between women and nature during the period. At the same time, she challenges essentialist discourses that assume innate affinities between women and the natural world. Rather, Moine shows, Victorian women poets mobilised these alliances to defend common interests and express their engagement with social issues. While well-known poets such as Elizabeth Barrett Browning and Christina Rossetti are well-represented in Moine's study, she pays particular attention to lesser known writers such as Mary Howitt or Eliza Cook who were popular during their lifetimes or Edith Nesbit, whose verse has received scant critical attention so far. She also brings to the fore the poetry of many non-professional poets. Looking to their immediate cultural environments for inspiration, these women reconstructed the natural world in poems that raise questions about the validity and the scope of representations of nature, ultimately questioning or

undermining social practices that mould and often fossilise cultural identities.

Matrixing Chi Al Case, 2020-09-16 Matrixing is the first and only science of the martial arts. Matrixing has been used to resolve martial arts both common and rare, bringing new lights to ancient disciplines. In this book the science of matrixing is used to define chi power. Chi is a type of energy that permeates the universe. Actually, the universe is made of chi, thus, it is impossible for science and physics to define or measure chi in any way. With matrixing, however, it is possible to define, and measure, chi power. Further, in this book the author shares his most scientific methods for generating chi, and manipulating it. He does this through a profound study of the martial arts. About the author: Al Case began the martial arts in 1967. Since that time he has studied Kenpo, classical Karate, Wing Chun, Aikido, Northern Shaolin Ton Toi, Southern Shaolin Fut Ga, Tai Chi Chuan, Pa Kua Chang, Indonesian weapons and more. He was a writer for the martial arts magazines, including a column in *Inside Karate*. He has written over 40 martial arts training manuals, and is the webmaster of MonsterMartialArts.com.
