*Sustainable Ho Chi Minh City: Climate Policies for Emerging Mega Cities*

Antje Katzschner, Michael Waibel, Dirk Schwede, Lutz Katzschner, Michael Schmidt, Harry Storch, 2015-12-01 As climate change and urban development are closely interlinked and often interact negatively, this edited volume takes Ho Chi Minh City (HCMC), Vietnam's first mega-urban region as a case study to analyse its vulnerability to climate change and to suggest measures towards a more sustainable urban development. The book offers an overview on land use planning regarding the aspects of urban flooding, urban climate, urban energy and urban mobility as well as spatial views from the angle of urban planning such as the metropolitan level, the city, the neighbourhood and building level. It shows that to a significant degree, measures dealing with climate change can be taken from the toolbox of sustainable urban development and reflects how institutional structures need to change to enhance chances for implementation given socio-cultural and economic constraints. This is merged and integrated into a holistic perspective of planning recommendations, supporting the municipal government to increase its adaptive capacity. The authors are members of a German government funded research project on how to support HCMC's municipal government to adapt to risks related to climate change.

**Cutting Transport CO2 Emissions** European Conference of Ministers of Transport, 2007-01-24 This report reviews the progress OECD and ECMT countries have made in reducing transport sector CO2 emissions and makes recommendations for the focus of future policies. It analyses over 400 abatement measures introduced or under development. Despite significant efforts on the part of some countries, transport CO2 emissions have increased steadily over the last ten years. Slowing the growth of these emissions will require more government action and an increasingly pro-active role from transport sector industries. The report identifies the policies most likely to be effective and underlines the importance of energy efficiency improvements for cost effective action on global warming.

*Mobility and Transportation* Wulf-Holger Arndt, 2014 While the trend towards the growth of megacities creates huge challenges, it also offers the opportunity for reshaping mobility patterns in cities, promoting energy efficiency and principles of low carbon development. In this volume, an overview is provided of solutions comprising concepts for sustainable transportation through intelligent management, innovative instruments for integrated transport planning, modelling systems, adaptation strategies in the transport sector and concepts for enhancing public transit. Developed for five cities of the programme by transdisciplinary and international research teams in close collaboration with local stakeholders, they are presented on the background of big challenges ranging from data collection issues, modelling and planning in a fast growing environment to resistance of citizens against big infrastructure projects

*Advanced Synergetics* Hermann Haken, 2012-12-06 This text on the interdisciplinary field of synergetics will be of interest to students and scientists in physics, chemistry, mathematics, biology, electrical, civil and mechanical engineering, and other fields. It continues the outline of basic concepts and methods presented in my book *Synergetics*. An Introduction, which has by now appeared in English, Russian, Japanese, Chinese, and German. I have written the present book in such a way that most of it can be

read independently of my previous book, though occasionally some knowledge of that book might be useful. But why do these books address such a wide audience? Why are instabilities such a common feature, and what do devices and self-organizing systems have in common? Self-organizing systems acquire their structures or functions without specific interference from outside. The differentiation of cells in biology, and the process of evolution are both examples of self-organization. Devices such as the electronic oscillators used in radio transmitters, on the other hand, are man made. But we often forget that in many cases devices function by means of processes which are also based on self-organization. In an electronic oscillator the motion of electrons becomes coherent without any coherent driving force from the outside; the device is constructed in such a way as to permit specific collective motions of the electrons. Quite evidently the dividing line between self-organizing systems and man-made devices is not at all rigid.

**Urban Transport and the Environment** World Conference On Transport Research Society, 2004-07-01

*The Organization of Transport* Massimo Moraglio, Christopher Kopper, 2014-12-05  
Over the past ten years, the study of mobility has demonstrated groundbreaking approaches and new research patterns. These investigations criticize the concept of mobility itself, suggesting the need to merge transport and communication research, and to approach the topic with novel instruments and new methodologies. Following the debates on the role of users in shaping transport technology, new mobility research includes debates from sociology, planning, economy, geography, history, and anthropology. This edited volume examines how users, policy-makers, and industrial managers have organized and continue to organize mobility, with a particularly attention to Europe, North America, and Asia. Taking a long-term and comparative perspective, the volume brings together thirteen chapters from the fields of urban studies, history, cultural studies, and geography. Covering a variety of countries and regions, these chapters investigate how various actors have shaped transport systems, creating models of mobility that differ along a number of dimensions, including public vs. private ownership and operation as well as individual vs. collective forms of transportation. The contributions

also examine the extent to which initial models have created path dependencies in terms of technology, physical infrastructure, urban development, and cultural and behavioral preferences that limit subsequent choices.
