Macchi C.200 Saetta Jose Fernandez,2012-10-01 The Macchi C.200 Saetta (also variously identified as the MC.200) was a WWII fighter aircraft built by Aeronautica Macchi in Italy, and used in various forms throughout the Regia Aeronautica (Italian Air Force). The C.200 had excellent maneuverability and the general flying characteristics left little to be desired. The design, development and operations of these aircraft is told in detail, illustrated with many previously unpublished photos. Color schemes and markings are described and illustrated. Scale plans in 1/72nd and 1/48th. The author is a renowned aviation historian, with many books in both French and English to his name.

Italian Aces of World War 2 Giorgio Apostolo,2012-12-20 Flying aircraft such as the Macchi 200-202, Fiat G.50 and biplane Fiat CR.42, the Italian fighter pilots were recognised by their Allied counterparts as brave opponents blessed with sound flying abilities, but employing under-gunned and underpowered equipment. Following the Italian surrender in September 1943, a number of aces continued to take the fight to the Allies as part of the Luftwaffe-run ANR, which was equipped with far more potent equipment such as the Bf 109G, Macchi 205V and Fiat G.55. Flying these types, the handful of ANR squadrons continued to oppose Allied bombing raids on northern Italy until VE-Day.

Japanese Battleships Robert Brown,2016-10-10 This fully illustrated guide offers historical context and step-by-step instruction for building and modifying Japanese battleship models. This volume in the ShipCraft series covers the two related classes of Japanese 14in-gunned battleships, originally built during the First World War but subsequently reconstructed. These ships are famous for their towering forward superstructure, usually described as a pagoda bridge, that they featured when rebuilt. The Ise-class ships underwent further reconstruction during the Second World War to emerge as a unique hybrid of battleship and aircraft carrier to compensate for fleet carriers sunk earlier in the war. This lavishly illustrated guide takes readers through a brief history of the Fuso-class and Ise-class ships, highlighting differences between sisterships and changes in their appearance over their careers. It features color profiles of paint schemes as well as detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing, and provides hints on modifying and improving the basic kit. This volume also includes a photographic survey of selected high-quality models in a variety of scales and a section on further research references

Modeling World War II in Europe Aaron Skinner,2019 The all-new book, Modeling World War II in Europe, features a variety of modeling subjects that fought in the European Theater from the invasion of Poland in 1939 until the end of the war. You'll find armor, aircraft, ships, figures, and dioramas - including several models of D-Day subjects - from FineScale Modeler's Aaron Skinner and other top modeling experts. More than a dozen projects are featured with easy-to-follow step-by-step photos and detailed captions. A variety of popular subjects are covered, including: Hetzer Valentine bridge-layer B-26 Marauder Figure vignette Scratchbuilt Duca d'Aosta Italian destroyer PZL.11 fighter And more!

Eagles of the Luftwaffe Matthew Willis,2021-11-02 The Focke-Wulf Fw 200 Condor was conceived for peace but turned to a warlike purpose savaging convoys bringing vital supplies to Britain. The aircraft Churchill called the scourge of the Atlantic became synonymous with the struggle to supply the Allies by sea. As a truly long-range reconnaissance bomber, the Condor acted as the eyes and ears of the Kriegsmarine, while packing a powerful punch itself. As the Allies stepped up their efforts to address the vulnerability of their convoys to aerial reconnaissance and attack, however, the Fw 200's weaknesses became ever more apparent. Naval aviation author Matthew Willis tackles the career of the feared aircraft, from its beginnings as a cutting-edge airliner, through its early development into a military transport and a maritime bomber and 'spyplane', including the addition of ever more armament and technology such as radar and the carriage of radio-controlled glider bombs. From the expanses of the Atlantic, via the freezing Arctic seas to the heat and dust of North Africa, the operational history of the Fw 200 is examined.

Macchi C.202 Folgore Davide F. Jabes,Alessandro Romanello,Niccolò Tognarini,2021-12-02 The Macchi C.202 was probably the most successful Italian fighter during the Second World War. It is generally agreed that the performance of the Macchi was superior to both the Hawker Hurricane and the Curtiss P-40 Kittyhawk and on a par with the Supermarine Spitfire Mk. V. It is not by chance that virtually all the Italian top scoring aces flew this plane either with the Regia Aeronautica or the Aeronautica Nazionale Repubblicana. At the same time, the Mc.202 is the symbol of the dysfunctions in the Italian military-industrial complex: the lack of sound industrial planning resulting in orders from the Regia Aeronautica for an exaggerated number of different aircraft; the lack of the development of adequate engines limiting aircraft performance and reducing capacity to house weapons with a proper punch; the corruption of politics and the culpable connivance of the high military spheres. The Mc.202 was therefore produced in limited numbers, while there is consensus that air war, especially in the African theatre, would have been different had the aircraft been adopted before.

You Suck at Racing Ian Korf,2016-05-12 A lot of books on driving are written by professional racers who assume you too want to be a professional racer. Not this book. It's written by a hobbyist who suggests you keep your day job. Besides, it's much more fun being an enthusiastic amateur than a jaded professional (just ask someone in the sex industry). This book is designed to help the average driver make the transition from commuter to safe road racer in as few pages as possible. I wrote this book because it's what I would have wanted to read when I first became interested in track driving: succinct, nerdy, practical, and occasionally diverting. It is not intended as a definitive tome or a work of art. It's more like a sandwich: convenient and nourishing.

Battle of Britain The Movie Dilip Sarkar,Robert J Rudhall,2023-05-31 Released in 1969, the film Battle of Britain went on to become one of the most iconic war movies ever produced. The film drew many respected British actors to accept roles as key figures of the battle, including Sir Laurence Olivier as Hugh Dowding and Trevor Howard as Keith Park. It also starred Michael Caine, Christopher Plummer and Robert Shaw as squadron leaders. As well as its large all-star international cast, the film was notable for its spectacular flying sequences which were on a far grander scale than anything that had been seen on film before. At the time of its release, Battle of Britain was singled out for its efforts to portray the events of the summer of 1940 in great accuracy. To achieve this, Battle of Britain veterans such as Group Captain Tom Gleave, Wing Commander Robert Stanford Tuck, Wing Commander Douglas Bader, Squadron Leader Bolesław Drobiński and Luftwaffe General Adolf Galland were all involved as consultants. This detailed description of the making of the film is supported by a mouth-watering selection of pictures that were taken during the production stages. The images cover not only the many vintage aircraft used in the film, but also the airfields, the actors, and even the merchandise which accompanied the film's release in

1969 – plus a whole lot more. There are numerous air-to-air shots of the Spitfires, Messerschmitts, Hurricanes and Heinkels that were brought together for the film. There are also images that capture the moment that Battle of Britain veterans, some of whom were acting as consultants, visited the sets. Interviews with people who worked on the film, such as Hamish Mahaddie, John Blake and Ron Goodwin, among others, bring the story to life.

Spitfire V vs C.202 Folgore Donald Nijboer, 2014-04-20 The inability of the Italians and Germans to invade Malta proved decisive for Allied victory in the Mediterranean during World War II, as the islands provided the Allies with a base from which to project air power. Early Italian efforts to pound the islands into submission were supplemented by major German forces from January 1942 and in a few weeks the situation for the defenders reached a critical stage; in response, in March 1942 the first Spitfires were delivered to Malta. Throughout the summer C.202s fought over Malta, escorting tiny formations of Cant Z.1007s, SM.79s and Ju 88s. The fighting subsided in August and September, but grew in strength with the arrival of more C.202s. In October the Regia Aeronautica could muster three Gruppi with a total of 74 C.202s. For ten days the Italians pressed a relentless attack before attrition brought the offensive to a halt. Throughout the bombing campaign the British were able to supply Malta with ever increasing numbers of Spitfires.

German Eagles in Spanish Skies David Johnston, 2018-11-28 Willy Messerschmitt's Bf 109 is among the most famous fighter aircraft in the history of military aviation, and it was during the Spanish Civil War that it first saw combat. Using newly-discovered records, the author describes the Bf 109's operational career with the Legion Condor, the German military unit that fought in Spain. The text is enhanced by many personal accounts written by the pilots who flew the Bf 109 in Spain, with descriptions of combat and other aspects of life in Spain from 1936-39. All versions of the Bf 109 which served in Spain are described, accompanied by illustrations from the pilot's notes. The book is illustrated with 235 photos--most never before published--and technical drawings. Appendices provide detailed descriptions of the fourteen Bf 109 A fighters sent to Spain, biographies of selected pilots who served there, and a copy of J/88's victory list from the estate of a former Legion fighter pilot.

Horten Ho 229 Andrei Shepelev, Huib Ottens, 2006 The Horten Ho 229, one of the Luftwaffe's legendary secret projects or so-called 'wonder weapons', was one of the most enigmatic aircraft designs to emerge from World War II. In some ways a precursor to the 'stealth' concept, it was clearly ahead of its time when compared to its contemporaries. The Ho 229 was planned as the first of the next generation of German jet fighters to follow on from the Messerschmitt Me262, with the intention to create a high-speed cannon-equipped fighter-bomber and reconnaissance aircraft. Development involved design bureaus such as Goering, Galland, and Lippish, and flight testing began in December 1944. This book covers the Ho 229's development and operational record in detail and includes specially commissioned photographs of a surviving prototype, J3. The authors are both acknowledged experts on Horton aircraft.

The Bell P39 Airacobra and P63 Kingcobra Fighters Yefim Gordon, Sergey Komissarov, Dmitriy Komissarov, 2019-06-28 Under the Lend-Lease agreement with the US during WWII, the Soviet Union received large quantities of war materiel, including many aircraft; the Bell P-39 Airacobra takes a special place among them. The P-39 was dismissed as hardly suitable for combat both by the US and England, who turned it over in large numbers to the USSR. Soviet pilots had different views, though, and achieved excellent results while flying the type; more than twenty Soviet aces flew the P-39. As air combat over the Russian front was conducted mostly at low altitudes, the P-39 came into its own. Innovative tactics and motivation, coupled with the P-39's sturdy construction and adequate firepower, proved successful for the Soviets. The P-39 was in Soviet service since 1942; nearly 5,000 were supplied and used on the Soviet-German front, along with 2,400 P-63 Kingcobras, which saw only limited action against Japan at the close of the war. This detailed, illustrated history features many color side views and previously unpublished photographs.

Famous Fighters of the Second World War, 1957 Beskriver jagerfly kendt fra 2. verdenskrig og fra flere lande
Lend-Lease and Soviet Aviation in the Second World War Vladimir Kotelnikov, 2021-12-15 Seventy years have passed since the Second World War yet the books and articles still keep coming in a never-ending stream discussing the question of what role the deliveries of arms and materials by Soviet allies played in the victory of the Red Army. In Russia, the American Bell P-39 Airacobra fighter along with the Studebaker US6 truck and canned stewed meat became the symbols of Allied help to the USSR during the Second World War. Other aircraft which arrived to the country under the Lend-Lease program are less known but also made a valuable contribution to the victory. The author of this book for the first time has assembled a huge volume of information related to the delivery of aviation equipment from the UK and USA. Based on documents from Russian and foreign archives, museums, and veterans' recollections, the author has made a qualitative and quantitative appraisal of the influence of these deliveries upon the Soviet war effort and airpower during the conflict. The book details the routes of the aircraft deliveries to Russia, the modifications which were done in order to suit the demands of the Russian climate and specifics of their front-line use, as well as the process of the new aircraft being mastered by the units of the Red Army Air Force. The first foreign aircraft arrived in the Soviet Union with No. 151 Wing RAF in 1941, and their use expanded rapidly - they took part in the counteroffensive near Moscow, the battles for Stalingrad and the Kursk salient, and operations of the war up to the battle for Berlin and the capitulation of Japanese forces in the North China. The author includes the results of the combat assessments of the aircraft,

which were done at the Scientific Testing Institute of the Air Force, as well as reports from front-line regiments, and multiple combat episodes, detailing the views of the Soviet designers and pilots on the British and American aircraft. A separate chapter provides information about the aircraft which were not officially delivered but appeared in the Soviet Union accidentally. For the first time an attempt has been made to assess the influence of the deliveries of material and equipment upon the Soviet aviation industry and war effort. The author's impressive text is supported by nearly 700 color and b/w photographs, 100 color aircraft profiles, plus maps, charts etc.

Finnish Aces. Their Planes and Units 1939-1945 Kari Stenman,2022-02-15 The small number of Finnish fighter pilots who defended Finland in three separate wars between 1939 and 1945 amassed scores only bettered by the Luftwaffe's pilots. Initially equipped with a mixed collection of fighters acquired from sources across the world, the Finnish Air Force was thrust into combat in the defensive Winter War against an invasion by the Soviet Union in 1939, followed by the Continuation War, together with Germany and the other Axis powers against the Soviets, in 1941-1944. The third conflict, the Lapland War against Germany, occurred in 1944-1945. Aircraft of the famous Finnish aces are described in detail with many photos and color profiles. This book includes the aircraft of Ilmari Juutilainen, Hans Wind, and Eino Luukkanen, among others. It is an essential reading for aviation enthusiasts and scale aeromodelers.
