*Listening to Images* Tina M. Campt, 2017-03-17 In *Listening to Images* Tina M. Campt explores a way of listening closely to photography, engaging with lost archives of historically dismissed photographs of black subjects taken throughout the black diaspora. Engaging with photographs through sound, Campt looks beyond what one usually sees and attunes her senses to the other affective frequencies through which these photographs register. She hears in these photos—which range from late nineteenth-century ethnographic photographs of rural African women and photographs taken in an early twentieth-century Cape Town prison to postwar passport photographs in Birmingham, England and 1960s mug shots of the Freedom Riders—a quiet intensity and quotidian practices of refusal. Originally intended to dehumanize, police, and restrict their subjects, these photographs convey the softly buzzing tension of colonialism, the low hum of resistance and subversion, and the anticipation and performance of a future that has yet to happen. Engaging with discourses of fugitivity, black futurity, and black feminist theory, Campt takes these tools of colonialism and repurposes them, hearing and sharing their moments of refusal, rupture, and imagination.

**Perceptions of Knowledge Visualization: Explaining Concepts through Meaningful Images** Ursyn, Anna, 2013-10-31 Multisensory perception is emerging as an important factor in shaping current lifestyles. Therefore, computer scientists, engineers, and technology experts are acknowledging the comparative power existing beyond visual explanations. *Perceptions of Knowledge Visualization: Explaining Concepts through Meaningful Images* discusses issues related to visualization of scientific concepts, picturing processes and products, as well as the role of computing in the advancement of visual literacy skills. By connecting theory with practice, this book gives researchers, computer scientists, and academics an active experience which enhances the perception and the role of computer graphics.

**Images in Social Media** Susanne Ørnager, Haakon Lund, 2022-06-01 This book focuses on the methodologies, organization, and communication of digital image collection research that utilizes social media content. (Image is here understood as a cultural, conventional, and commercial—stock photo—representation.) The lecture offers expert views that provide different interpretations of images and their potential implementations. Linguistic and semiotic methodologies as well as eye-tracking research are employed to both analyze images and comprehend how humans consider them, including which salient features generally attract viewers' attention. This literature review covers image—specifically photographic—research since 2005, when major social media platforms emerged. A citation analysis includes an overview of co-citation maps that demonstrate the nexus of image research literature and the journals in which they appear. Eye tracking tests whether scholarly templates focus on the proper features of an image, such as people, objects, time, etc., and if a prescribed theme affects the eye movements of the observer. The results may point to renewed requirements for building image search engines. As it stands, image management already requires new algorithms and a new understanding that involves text recognition and very large database processing. The aim of this book is to present different image research areas and demonstrate the challenges image research faces. The book's scope is, by necessity, far from comprehensive, since the field of digital image research does not cover fake news, image manipulation, mobile photos, etc.; these issues are very complex and need a publication of their own. This book should primarily be useful for students in library and information science, psychology, and computer science.

**Grammatology of Images** Sigrid Weigel, 2022-08-16 *Grammatology of Images* radically alters how we approach images. Instead of asking for the history, power, or essence of images, Sigrid Weigel addresses imaging as such. The book considers how something a-visible gets transformed into an image. Weigel scrutinizes the moment of mis-en-apparition, of making an appearance, and the process of concealment that accompanies any imaging. Weigel reinterprets Derrida's and Freud's concept of the trace as that which must be thought before something exists. In doing so, she illuminates the threshold between traces and iconic images, between something immaterial and its pictorial representation. Chapters alternate between general accounts of the line, the index, the effigy, and the cult-image, and case studies from the history of science, art, politics, and religion, involving faces as indicators of emotion, caricatures as effigies of defamation, and angels as embodiments of transcendental ideas. Weigel's approach to images illuminates fascinating, unexpected correspondences between premodern and contemporary image-practices, between the history of religion and the modern sciences, and between things that are and are not understood as art.

**Images and Reflections** Robin Wall, 2009-11 Using his etchings and paintings as a visual diary, the author takes the reader on a journey revealing his motivations and personal experiences at the time the work was produced. The paintings and etchings are illustrated in full colour, and span a period of little more than thirty years, (1975 to 2009). Interspersed between the illustrations are essays on Oils, Perspective, Pigments, Photography etc., which describe various discoveries and innovations that have affected the way artists express themselves. In the preface, Robin Wall traces scientific developments over the last two hundred years that have profoundly altered the way we think about ourselves and our relationship to the universe. He argues that this paradigm shift should be a strong motivation for artists of all stripes, and could result in a new form of Romanticism. In this regard he examines the original Romantic movement and what he sees as a far sighted vision amongst

some of its members.

**Images of Conflict** Jean Bourgeois, Nicholas Saunders, Birger Stichelbaut, 2008-12-18 Striking aerial views of war, and of the scarred landscapes of its aftermath are the focus of this unique and multidisciplinary book. For the first time, the history, significance, and technology of military aerial photography are brought together and explored by military historians, archaeologists, and anthropologists. This new approach opens the door to a modern reassessment of military aerial imagery, reveals the concepts and philosophies that guided their production and interpretation, and illustrates the complex interaction between humans and technology in creating and understanding the landscapes of conflict.

*Processing of Synthetic Aperture Radar (SAR) Images* Henri Maître, 2013-05-10 Synthetic aperture radar provides broad-area imaging at high resolutions, which is used in applications such as environmental monitoring, earth-resource mapping, and military systems. This book presents the tools required for the digital processing of synthetic aperture radar images. They are of three types: (a) the elements of physics, (b) mathematical models and (c) image processing methods adapted to particular applications.

*American Photography* Vicki Goldberg, Robert Silberman, 1999 This beautiful and informative photographic history includes images from 1900 to 1999. Many are often seen (bullet piercing the apple, splashing crown of milk, Sophia Loren looking askance at Jayne Mansfield's plunging decollete, and Dorothea Lange's Migrant Mother); but most are probably unknown, because the photos were selected not only for their visual and cognitive qualities but also for their importance to the history and development of photographic technique and usage. The century is divided into thirds for explanation's sake, and there is at least one photograph for every year. While this is a picture book, the accompanying text provides informative introductions to the uses and abuses of perhaps the century's most important medium. The book is companion to the PBS series. *Images in Mind* Deborah Steiner, 2001 In archaic and classical Greece, statues played a constant role in people's religious, political, economic, aesthetic, and mental lives. Evidence of many kinds demonstrates that ancient Greeks thought about--and interacted with--statues in ways very different from our own. This book recovers ancient thinking about statues by approaching them through contemporary literary sources. It not only shows that ancient viewers conceived of images as more operative than aesthetic, but additionally reveals how poets and philosophers found in sculpture a practice "'good to think with.'" Deborah Tarn Steiner considers how Greek authors used images to ponder the relation of a copy to an original and of external appearance to inner reality. For these writers, a sculpture could straddle life and death, encode desire, or occasion reflection on their own act of producing a text. Many of the same sources also reveal how thinking about statues was reflected in the objects' everyday treatment. Viewing representations of gods and heroes as vessels hosting a living force, worshippers ritually washed, clothed, and fed them in order to elicit the numinous presence within. By reading the plastic and verbal sources together, this book offers new insights into classical texts while illuminating the practices surrounding the design, manufacture, and deployment of ancient images. Its argument that images are properly objects of cultural and social--rather than purely aesthetic--study will attract art historians, cultural historians, and anthropologists, as well as classicists.

**Hospital Images** Paul Aronowitz, 2012-02-03 This gorgeous, full-color atlas and case-book presents more than sixty cases with over one hundred associated, super high-quality clinical images that a physician needs to be able to rapidly recognize and know for accurate, expedient diagnosis and treatment. The images are presented with the patient's brief medical history, followed by the diagnosis, brief discussion of the diagnosis, and the patient's clinical course and treatment. These miniature case studies encompass photos and descriptions of patients, supporting physical findings, X-rays, CT scans, electrocardiograms, blood smears, gross pathologic specimens, and microscopic pathology slides.

*Augmented Images* Lars C. Grabbe, Patrick Rupert-Kruse, Norbert M. Schmitz, 2022-09-07 Common boundaries between the physical reality and rising digital media technologies are fading. The age of hyper-reality becomes an age of hyper-aesthetics. Immersive media and image technologies – like augmented reality – enable a completely novel form of interaction and corporeal relation to and with the virtual image structures and the different screen technologies. »Augmented Images« contributes to the wide range of the hyper-aesthetic image discourse to connect the concept of dynamic augmented images with the approaches in modern media theory, philosophy, perceptual theory, aesthetics, computer graphics and art theory as well as the complex range of image science. This volume monitors and discusses the relation of images and technological evolution in the context of augmented reality within the perspective of an autonomous image science.

*Images of the Plains* Brian W. Blouet, Merlin P. Lawson, 1975-01-01 Sixteen papers by foremost American, Canadian, and English historical geographers examine the sources of Imagery of the American and Canadian Great Plains, the processes of image formation, and the behavioral implications of various kinds of images. The papers deal with exploratory images of the Plains, resource evaluation in the prefrontier West, governmental appraisal of the western frontier, real and imagined climatic hazards, the desert and garden myths, and adaptations to reality.

**Captive Images** Katherine Biber, 2007-05-07 *Captive Images* examines the law's treatment of photographic evidence and uses it to investigate the relationship between law, image and fantasy. Based around the scholarly examination of a bank robbery, in which a surveillance camera captures the robbery in progress, Katherine Biber draws upon critical writing from psychoanalysis, postcolonialism, art, law, literature and feminism to 'read' this crime, its texts and its images. The result is an interdisciplinary study of crime that unfolds a compelling narrative about race relations, national identity and fear. This book is an essential read for all levels of law students studying, or interested in, law, criminology and cultural studies.

**The Weight of Images** Katariina Kyrölä, 2016-02-17 *The Weight of Images* explores the ways in which media images can train their viewers' bodies. Proposing a shift away from an understanding of spectatorship as being constituted by acts of the mind, this book favours a theorization of relations between bodies and images as visceral, affective engagements that shape our body image - with close attention to one particularly charged bodily characteristic in contemporary western culture: fat. The first mapping of the ways in which fat, gendered bodies are represented across a variety of media forms and genres, from reality television to Hollywood movies, from TV sitcoms to documentaries, from print magazine and news media to online pornography, *The Weight of Images* contends that media images of fat bodies are

never only about fat; rather, they are about our relation to corporeal vulnerability overall. A ground-breaking volume, engaging with a rich variety of media and cultural texts, whilst examining the possibilities of critical auto-ethnography to unravel how body images take shape affectively between bodies and images, this book will appeal to scholars and students of sociology, media, cultural and gender studies, with interests in embodiment and affect.

**Public Images** Ryan Linkof,2020-08-12 The stolen snapshot is a staple of the modern tabloid press, as ubiquitous as it is notorious. The first in-depth history of British tabloid photojournalism, this book explores the origin of the unauthorised celebrity photograph in the early 20th century, tracing its rise in the 1900s through to the first legal trial concerning the right to privacy from photographers shortly after the Second World War. Packed with case studies from the glamorous to the infamous, the book argues that the candid snap was a tabloid innovation that drew its power from Britain's unique class tensions. Used by papers such as the Daily Mirror and Daily Sketch as a vehicle of mass communication, this new form of image played an important and often overlooked role in constructing the idea of the press photographer as a documentary eyewitness. From Edward VIII and Wallis Simpson to aristocratic debutantes Lady Diana Cooper and Margaret Whigham, the rage of the social elite at being pictured so intimately without permission was matched only by the fascination of working class readers, while the relationship of the British press to social, economic and political power was changed forever.Initially pioneered in the metropole, tabloid-style photojournalism soon penetrated the journalistic culture of most of the globe. This in-depth account of its social and cultural history is an invaluable source of new research for historians of photography, journalism, visual culture, media and celebrity studies.

**Shrines and Miraculous Images** William B. Taylor,2010 William Taylor explores the use of local and regional shrines, and devotion to images of Christ and Mary, including Our Lady of Guadalupe, to get to the heart of the politics and practices of faith in Mexico before the Reforma.

Images of Blood in American Cinema Kjetil Rødje,2016-03-09 Through studying images of blood in film from the mid-1950s to the end of the 1960s, this path-breaking book explores how blood as an (audio)visual cinematic element went from predominately operating as a signifier, providing audiences with information about a film's plot and characters, to increasingly operating in terms of affect, potentially evoking visceral and embodied responses in viewers. Using films such as The Return of Dracula, The Tingler, Blood Feast, Two Thousand Maniacs, Color Me Blood Red, Bonnie and Clyde, and The Wild Bunch, Rødje takes a novel approach to film history by following one (audio)visual element through an exploration that traverses established standards for film production and reception. This study does not heed distinctions regarding to genres (horror, western, gangster) or models of film production (exploitation, independent, studio productions) but rather maps the operations of cinematic images across marginal as well as more traditionally esteemed cinematic territories. The result is a book that rethinks and reassembles cinematic practices as well as aesthetics, and as such invites new ways to investigate how cinematic images enter relations with other images as well as with audiences.

*Enemy Images in American History* Ragnhild Fiebig-von Hase,Ursula Lehmkuhl,1998-01-01

**On Holy Images** Saint John of Damascus,Aeterna Press,1898 A Treatise on Images will not be out of place in a public, which is confusing the making of images with the making of idols. A great Christian of the eighth century found himself called upon to face an imperial Iconoclast. He would willingly have remained silent, but he would not bury his talent of eloquence. He brought it forth and witnessed to the teaching of the Church in language which present 'exciting scenes' in Anglican churches brings home in the most forcible way. Our English image breakers are in the camp of Leo the Isaurian, who in the eighth century waged war against holy images, on the plausible pretext that they withdrew honour from God. The seventh General Council condemned his assault, and it determined the different kinds of worship, using the Greek terms of latreia and douleia. Aeterna Press
